The Nebra Sky-disc Regine Maraszek, 2009

The Nebra Sky Disc Howard Crowhurst, 2012-12 Following his groundbreaking work on the Carnac alignments, Howard Crowhurst reveals the hidden meaning of one of the most enigmatic objects ever unearthed and shows the profound understanding it encodes. The Nebra Sky Disc is the oldest representation of the night sky known to date. Made of precious metals from different parts of Europe, it is the Rosetta stone of prehistoric astronomy and shows the existence of time cycles maintained to the present day. Crowhurst's astounding discoveries stem from the 39 holes punched out around the disc's perimeter which hold the key to a pattern in the solar system. These holes have been totally ignored by all researchers until now. Photos and diagrams are in color to facilitate understanding. According to reviewer's, the book is very readable.

Our Place in the Universe Sun Kwok, 2017-04-22 If you have ever wanted to understand the basic principles of astronomy and celestial movements, you should read this book. Using pictures of the sky observed from different places on Earth, as well as drawings of ancient astronomical methods and tools, Prof. Sun Kwok tells this story in an entertaining and fascinating way. Since the beginning of human civilization, people have wondered about the structure of the cosmos and our place in the Universe. More than 2,000 years ago, our ancestors knew that the seasons were unequal, the Earth was an unattached object floating in space, and stars existed that they could not see. From celestial observations, they concluded that the Earth was round. Using simple tools and mathematics, ancient astronomers accurately determined the sizes of the Earth and Moon, the distance to the Moon, and the lengths of the months and year. With a clever device called the armillary sphere, Greek astronomers could predict the times of sunrise and sunset on any day of the year, at any place on Earth. They developed sophisticated mathematical models to forecast Mars' motions hundreds of years into the future. Find out how ancient observers achieved these remarkable feats. With minimal use of mathematics, this book retraces the footsteps of our ancestors, explains their intellectual journeys in simple terms, and explores the philosophical implications of these discoveries.

Our Moon Rebecca Boyle, 2025-06-03 LONGLISTED FOR THE NATIONAL BOOK AWARD • NATIONAL BESTSELLER • “A riveting feat of science writing that recasts that most familiar of celestial objects into something eerily extraordinary, pivotal to our history, and awesome in the original sense of the word.”—Ed Yong, New York Times bestselling author of *An Immense World* WINNER OF THE LOS ANGELES TIMES BOOK PRIZE • A NEW YORKER AND SMITHSONIAN BEST BOOK OF THE YEAR • A New York Times Book Review Editors' Choice Many of us know that the Moon pulls on our oceans, driving the tides, but did you know that it smells like gunpowder? Or that it was essential to the development of science and religion? Acclaimed journalist Rebecca Boyle takes readers on a dazzling tour to reveal the intimate role that our 4.51-billion-year-old companion has played in our biological and cultural evolution. Our Moon's gravity stabilized Earth's orbit—and its climate. It drew nutrients to the surface of the primordial ocean, where they fostered the evolution of complex life. The Moon continues to influence animal migration and reproduction, plants' movements, and, possibly, the flow of the very blood in our veins. While the Sun helped prehistoric hunters and gatherers mark daily time, early civilizations used the phases of the Moon to count months and years, allowing them to plan farther ahead. Mesopotamian priests recorded the Moon's position in order to make predictions, and, in the process, created the earliest known empirical, scientific observations. In *Our Moon*, Boyle introduces us to ancient astronomers and major figures of the scientific revolution, including Johannes Kepler and his influential lunar science fiction. Our relationship to the Moon changed when Apollo astronauts landed on it in 1969, and it's

about to change again. As governments and billionaires aim to turn a profit from its resources, Rebecca Boyle shows us that the Moon belongs to everybody, and nobody at all.

Eclipse Kelsey Oseid, 2024-02-06 Discover the ancient myths and fascinating science of the world's most striking celestial phenomena—eclipses—in this educational, beautifully illustrated guide by the acclaimed author of *What We See in the Stars*. Awe-inspiring, majestic, and always a little otherworldly, eclipses have captivated our imaginations for thousands of years. Whether plunged into darkness as the sun disappears in the middle of the day or enchanted by the moon's blood red glow as a vast shadow creeps across its surface, our ancestors both feared and revered eclipses, seeking to understand these striking celestial events through both storytelling and science. In *Eclipse*, celebrated artist and author Kelsey Oseid explores the science and mystique of lunar and solar eclipses, from the myths of our ancestors to today. Did you know that in Chinese legends, solar eclipses were caused by dragons eating the sun? Or that the Norse people believed that a sky wolf chased away the moon? Oseid presents these rich historical stories alongside informative, accessible science to enrich your understanding: a solar eclipse only occurs during a new moon; a selenelion is when you can see the lunar eclipse in front of you and the sunset behind you; and the Mars Rovers have even taken photographs of eclipses from Mars. Filled with captivating information and vivid, colorful illustrations, *Eclipse* will delight and inspire astronomy lovers of all ages.

Prehistoric Europe Julian Heath, 2025-08-07 A full-color examination of 50 fascinating and important archaeological discoveries from prehistoric Europe. Countless archaeological sites and artefacts relating to the diverse prehistoric peoples who occupied the landscapes of Europe thousands of years ago, have been unearthed, either by archaeologists, or by lucky individuals who stumbled across them by chance. *Prehistoric Europe: 50 Great Discoveries* examines a small, but carefully chosen selection of sites and artefacts from among this abundance of archaeological evidence, all of which are remarkable, and provides fascinating insights into Europe's distant past and its long-lost prehistoric societies. These 50 discoveries cover

some sixty thousand years of European prehistory, beginning in the Middle Paleolithic ('Old Stone Age'), the time of our enigmatic ancient cousins, the Neanderthals, and ending in the Iron Age, the time of 'Celtic' society, and marking the last chapter in the remarkable story of prehistoric Europe. Lying between the Middle Paleolithic and the Iron Age discoveries are those from Mesolithic ('Middle Stone Age'), Neolithic ('New Stone Age'), Chalcolithic ('Copper Age'), and Bronze Age Europe. The Mesolithic, Neolithic, Chalcolithic and Bronze Age, mark the time of Europe's final hunter-gatherer societies, its first farming communities, and the emergence of metalworking, respectively.

Introduction to Astronomy and Astrophysics Arnold Hanslmeier,2023-01-30 This textbook provides the basic theoretical and practical knowledge of astronomy and astrophysics. It provides an overview from classical astronomy and observational

methods to solar physics and astrophysics of stars and galaxies. It concludes with chapters on cosmology, astrobiology, and mathematical and numerical methods. Numerous color illustrations, examples of calculations, and exercises with solutions make this work a useful companion to undergraduate astronomy lectures. The book is suitable for students of physics and astronomy at teacher training level or in the Bachelor's degree - but also people interested in natural sciences with appropriate basic knowledge of mathematics and physics will find here an appealing introduction to the subject. This fourth edition has been updated and revised with respect to the latest developments in astronomy. The chapter on mathematical methods has been redesigned and the software used is now exclusively Python. From the contents: Spherical astronomy - History of astronomy - Celestial mechanics - Astronomical instruments - Physics of the bodies of the solar system - The Sun - State variables of the stars - Stellar atmospheres - Stellar structure - Stellar evolution - Interstellar matter - The Galaxy - Extragalactic systems - Cosmology - Astrobiology - Mathematical methods. This book is a translation of the original German 4th edition *Einführung in Astronomie und Astrophysik* by Arnold Hanslmeier, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Rhapsody of Northern Art Peter Hupfau, 2019-01-23 *Rhapsody of Northern Art* presents fascinating artefacts produced between the late Bronze Age and the start of the Romanesque Period. Ancient objects from Northern Europe, exhibited in museums, are usually appreciated as documenting the past and reflecting its society. The people viewing these objects are able to become aware of skills and techniques that were applied many generations ago. However, a number of such objects should certainly be regarded more as works of fine art. Since the early 20th century, artists such as Duchamp have created "object art" and installations from contemporary artists often show art of a quality similar to that of some ancient Central and Northern European cultures. This book will serve to help and encourage readers to see and appreciate Bronze Age and early Medieval artefacts of Central and Northern Europe in the way they do works of art created by internationally well-known contemporary artists.

Bone Antler Stone Tim Miller, 2019-07-03 Passing through more than thirty thousand years of history, the poems of Bone Antler Stone are a panorama of Europe from the painted caves of Chauvet and Lascaux to contact with Greece and Rome. The changing spiritual and material lives of the earliest Europeans are vividly imagined through their artwork, burials, architecture, and their interaction with the landscape, the seasons, and one another.

Ancient Stone Sites of New England and the Debate Over Early European Exploration, 2d ed. David Goudsward, 2023-10-11 In New England today there are megalithic stones, stone chambers and structures, carvings and

petroglyphs, even an unidentified skeleton in armor that defy easy explanation. From Maine to Massachusetts, this work examines various unexplained historical remains in New England, exploring not only the layout and dimensions of such sites--some reminiscent of Stonehenge with their huge stones, astronomical alignments and undiscovered purposes--but also the history and possible explanations for their existence. Theories regarding Norse, Phoenician, Irish, Celtic and Native American origins are presented here in an impartial and logical manner. Sites discussed include Dighton Rock in Berkley, Massachusetts; Newport Tower in Newport, Rhode Island; the Bellows Falls Petroglyphs in Bellows Falls, Vermont; and Mystery Hill in North Salem, New Hampshire (also known as America's Stonehenge), with expanded coverage new to this edition.

From Cave Art to Hubble Jonathan Powell,2019-11-20 Since ancient times, humans have been engaged in a continual quest to find meaning in and make sense of sights and events in the night sky. Cultures spread around the world recorded their earliest efforts in artwork made directly on the natural landscapes around them, and from there they developed more and more sophisticated techniques for observing and documenting astronomy. This book brings readers on an astronomical journey through the ages, offering a history of how our species has recorded and interpreted the night sky over time. From cave art to parchment scribe to modern X-ray mapping of the sky, it chronicles the ever-quickenig development of tools that informed and at times entirely toppled our understanding of the natural world. Our documentation and recording techniques formed the bedrock for increasingly complex forays into astronomy and celestial mechanics, which are addressed within these chapters. Additionally, the book explores how nature itself has recorded the skies in its own way, which can be unraveled through ongoing geological and archaeological studies. This tale of human discovery and ingenuity over the ages will appeal to anybody interested in the field of astronomy and its rich cultural history.
