A Hole in the Head Charles G. Gross, 2012-01-13 Essays on great figures and important issues, advances and blind alleys—from trepanation to the discovery of grandmother cells—in the history of brain sciences. Neuroscientist Charles Gross has been interested in the history of his field since his days as an undergraduate. *A Hole in the Head* is the second collection of essays in which he illuminates the study of the brain with fascinating episodes from the past. This volume's tales range from the history of trepanation (drilling a hole in the skull) to neurosurgery as painted by Hieronymus Bosch to the discovery that bats navigate using echolocation. The emphasis is on blind alleys and errors as well as triumphs and discoveries, with ancient practices connected to recent developments and controversies. Gross first reaches back into the beginnings of neuroscience, then takes up the interaction of art and neuroscience, exploring, among other things, Rembrandt's "Anatomy Lesson" paintings, and finally, examines discoveries by scientists whose work was scorned in their own time but proven correct in later eras.

Rethinking Medical Humanities Rinaldo F. Canalis, Massimo Ciavolella, Valeria Finucci, 2022-12-19 Medical Humanities may be broadly conceptualized as a discipline wherein medicine and its specialties intersect with those of the humanities and social sciences. As such it is a hybrid area of study where the impact of disease and healing science on culture is assessed and expressed in the particular language of the disciplines concerned with the human experience. However, as much as at first sight this definition appears to be clear, it does not reflect how the interaction of medicine with the humanities has evolved to become a separate field of study. In this publication we have explored, through the analysis of a group of selected multidisciplinary essays, the dynamics of this process. The essays predominantly address the interaction of literature, philosophy, art, art history, ethics, and education with medicine and its specialties from the classical period to the present. Particular attention has been given to the Medieval, Early Modern, and Enlightenment periods. To avoid a rigid compartmentalization of the book based on individual fields of study we opted for a fluid division into multidisciplinary sections, reflective of the complex interactions of the included works with medicine.

The Anatomists' Library Colin Salter, 2023-07-20 The Anatomist's Library is a fascinating chronological collection of the best anatomical books from six centuries, charting the evolution of both medical knowledge and illustrated publishing. There is a rich history of medical publishing across Europe with outstanding publications from Germany, France, Italy,

Netherlands, Spain, UK, and also many from Persia and Japan. Because of the high value of accurate medical textbooks, it was these works that pushed the boundaries of illustrated publishing. They commanded the expert illustrators and skilled engravers and hence didn't come cheaply. They were treasured by libraries and their intrinsic worth has meant that there is an incredible wealth of beautifully preserved historic examples from the 15th century onwards. The enduring popularity of Gray's Anatomy has shown that there is a long-term interest in the subject beyond the necessity of medical students to learn the modern equivalent – the 42nd edition (2020) – from cover to cover. But Englishman Henry Gray was late in the field and never saw the enduring success of his famous work. Having first published the surgeon's reference book in 1858, he died in 1861 after contracting smallpox from his nephew (who survived). He was just 34. Gray was following on from a long tradition of anatomists starting with Aristotle and Galen whose competing theories about the human body dominated early medicine. However they did not have the illustrative skills of Leonardo da Vinci who was trained in anatomy by Andrea del Verrocchio. In 1489 Leonardo began a series of anatomical drawings depicting the human form. His surviving 750 drawings (from two decades) represent groundbreaking studies in anatomy. However none of Leonardo's Notebooks were published during his lifetime, they only appeared in print centuries after his death. Brussels-born Andries van Wesel (Andreas Vesalius) professor at the University of Padua is deemed to be the founder of modern anatomical reference with his 1543 work *De Humani Corporis Fabrica Libri Septem* (On the fabric of the human body in seven books). An Italian contemporary was Bartolomeo Eustachi who supported Galen's medical theories. Among other discoveries he correctly identified the Eustachian tube and the arrangement of bones in the inner ear. His Anatomical Engravings were completed in 1552, nine years after Vesalius's great work, but remained unpublished until 1714. These are just two entries in a book brimming with an abundance of important illustrated works – with some more primitive examples from the 15th century, up to the 42nd edition of Gray's in the 21st.

Framing Formalism Richard Woodfield, 2013-10-23 Alois Riegl (1858-1905) was one of the founding fathers of modern formalist criticism. As a member of the Vienna School of Art Historians, he shared their range of interests in the decorative arts, art in transition, conservation and monuments. This collection of critical essays examines various facets of Riegl's work and opens with a new translation of Hans Sedlmayr's famous, and notorious, *Die Quintessenze der Lehren Riegls*. Included is Julius von Schlosser's assessment of Riegl's contribution to the Vienna School of Art Historians as well as essays by a team of international scholars. This book offers a re-engagement with the ideas of one of the most important and neglected art historians of the 20th century.

Research Methods in Health Humanities Craig M. Klugman, Erin Gentry Lamb, 2019 Research Methods in Health Humanities surveys the diverse and unique research methods used by scholars in the growing, transdisciplinary field of health humanities. Appropriate for advanced undergraduates, but rich enough to engage more seasoned students and

scholars, this volume is an essential teaching and reference tool for health humanities teachers and scholars. Health humanities is a field committed to social justice and to applying expertise to real world concerns, creating research that translates to participants and communities in meaningful and useful ways. The chapters in this field-defining volume reflect these values by examining the human aspects of health and health care that are critical, reflective, textual, contextual, qualitative, and quantitative. Divided into four sections, the volume demonstrates how to conduct research on texts, contexts, people, and programs. Readers will find research methods from traditional disciplines adapted to health humanities work, such as close reading of diverse texts, archival research, ethnography, interviews, and surveys. The book also features transdisciplinary methods unique to the health humanities, such as health and social justice studies, digital health humanities, and community dialogues. Each chapter provides learning objectives, step-by-step instructions, resources, and exercises, with illustrations of the method provided by the authors' own research. An invaluable tool in learning, curricular development, and research design, this volume provides a grounding in the traditions of the humanities, fine arts, and social sciences for students considering health care careers, but also provides useful tools of inquiry for everyone, as we are all future patients and future caregivers of a loved one.

Art as Biblical Commentary J. Cheryl Exum, 2019-05-23 Art as Biblical Commentary is not just about biblical art but, more importantly, about biblical exegesis and the contributions visual criticism as an exegetical tool can make to biblical exegesis and commentary. Using a range of texts and numerous images, J. Cheryl Exum asks what works of art can teach us about the biblical text. 'Visual criticism' is her term for an approach that addresses this question by focusing on the narrativity of images-reading them as if, like texts, they have a story to tell-and asking what light an image's 'story' can shed on the biblical narrator's story. In Part I, Exum elaborates on her approach and offers a personal testimony to the value of visual criticism. Part 2 examines in detail the story of Hagar in Genesis 16 and 21. Part 3 contains chapters on erotic looking and voyeuristic gazing in the stories of Bathsheba, Susanna, Joseph and Potiphar's wife and the Song of Songs; on the distribution of renown among Jael, Deborah and Barak; on the Bible's notorious women, Eve and Delilah; and on the sacrificed female body in the stories of the Levite's wife (Judges 19) and Mary the mother of Jesus.

Ars Electronica 2023 Festival for Art, Technology, and Society Gerfried Stocker, Markus Jandl, 2024-06-30 Towards a New Social Contract Ars Electronica 2023 is dedicated to the complex questions of truth and the concept of ownership in this digital age. In doing so, the festival navigates the central questions of our time. The focus is on how our perception of authentic and original is being transformed and whether truth can be owned, and how this relates to digitalization and the rapidly developing performance of artificial intelligence. How can the achievements of a tool that is so much based on the globally collective raw material of knowledge and creativity be made accessible to everyone and be harnessed to the benefit of all? This comprehensive volume brings together the works of artists, scientists, developers, designers, entrepreneurs and

activists from around the world and delves deep into the themes of the festival, offering insights, perspectives, and thought-provoking content that reflect on the intersection of art, technology, and society.

Heretics Leonardo Padura,2017-03-14 Padura's *Heretics* spans and defies literary categories . . . ingenious. —Maureen Corrigan, *Fresh Air* A sweeping novel of art theft, anti-Semitism, contemporary Cuba, and crime from a renowned Cuban author, *Heretics* is Leonardo Padura's greatest detective work yet. In 1939, the *Saint Louis* sails from Hamburg into Havana's port with hundreds of Jewish refugees seeking asylum from the Nazi regime. From the docks, nine-year-old Daniel Kaminsky watches as the passengers, including his mother, father, and sister, become embroiled in a fiasco of Cuban corruption. But the Kaminskys have a treasure that they hope will save them: a small Rembrandt portrait of Christ. Yet six days later the vessel is forced to leave the harbor with the family, bound for the horrors of Europe. The Kaminskys, along with their priceless heirloom, disappear. Nearly seven decades later, the Rembrandt reappears in an auction house in London, prompting Daniel's son to travel to Cuba to track down the story of his family's lost masterpiece. He hires the down-on-his-luck private detective Mario Conde, and together they navigate a web of deception and violence in the morally complex city of Havana. In *Heretics*, Leonardo Padura takes us from the tenements and beaches of Cuba to Rembrandt's gloomy studio in seventeenth-century Amsterdam, telling the story of people forced to choose between the tenets of their faith and the realities of the world, between their personal desires and the demands of their times. A grand detective story and a moving historical drama, Padura's novel is as compelling, mysterious, and enduring as the painting at its center.

The Subtle Knot Lianne Habinek,2018-06-06 In the early modern period, poetic form underpinned and influenced scientific progress. The language and imagery of seventeenth-century writers and natural philosophers reveal how the age-old struggle between body and soul led to the brain's emergence as a curiosity in its own right. Investigating the intersection of the humanities and sciences in the works of authors ranging from William Shakespeare and John Donne to William Harvey, Margaret Cavendish, and Johann Remmelin, Lianne Habinek tells how early modernity came to view the brain not simply as grey matter but as a wealth of other wondrous possibilities – a book in which to read the soul's writing, a black box to be violently unlocked, a womb to nourish intellectual conception, a creative engine, a subtle knot that traps the soul and thereby makes us human. For seventeenth-century thinkers, she argues, these comparisons were not simply casual metaphors but integral to early ideas about brain function. Demonstrating how the disparate fields of neuroscientific history and literary studies converged, *The Subtle Knot* tells the story of how the mind came to be identified with the brain.

We Are Our Brains D. F. Swaab,2014-01-07 A vivid account of what makes us human. Based groundbreaking new research, *We Are Our Brains* is a sweeping biography of the human brain, from infancy to adulthood to old age. Renowned neuroscientist D. F. Swaab takes us on a guided tour of the intricate inner workings that determine our potential, our limitations, and our desires, with each chapter serving as an eye-opening window on a different stage of brain development:

the gender differences that develop in the embryonic brain, what goes on in the heads of adolescents, how parenthood permanently changes the brain. Moving beyond pure biological understanding, Swaab presents a controversial and multilayered ethical argument surrounding the brain. Far from possessing true free will, Swaab argues, we have very little control over our everyday decisions, or who we will become, because our brains predetermine everything about us, long before we are born, from our moral character to our religious leanings to whom we fall in love with. And he challenges many of our prevailing assumptions about what makes us human, decoding the intricate “moral networks” that allow us to experience emotion, revealing maternal instinct to be the result of hormonal changes in the pregnant brain, and exploring the way that religious “imprinting” shapes the brain during childhood. Rife with memorable case studies, *We Are Our Brains* is already a bestselling international phenomenon. It aims to demystify the chemical and genetic workings of our most mysterious organ, in the process helping us to see who we are through an entirely new lens. Did you know? • The father’s brain is affected in pregnancy as well as the mother’s. • The withdrawal symptoms we experience at the end of a love affair mirror chemical addiction. • Growing up bilingual reduces the likelihood of Alzheimer’s. • Parental religion is imprinted on our brains during early development, much as our native language is. Praise for *We Are Our Brains* “Swaab’s ‘neurobiography’ is witty, opinionated, passionate, and, above all, cerebral.”—Booklist (starred review) “A fascinating survey . . . Swaab employs both personal and scientific observation in near-equal measure.”—Publishers Weekly (starred review) “A cogent, provocative account of how twenty-first-century ‘neuroculture’ has the potential to effect profound medical and social change.”—Kirkus Reviews

Brain Development and the Law Stephan Schleim, 2024-12-06 This open access book is the first to offer a systematic overview of the different methods for assessing brain development and a comparative review of how such assessments have already influenced the law. Lawmakers prefer to draw clear distinctions, but biology is characterized by continua: both in terms of how development proceeds within a person and how it differs from other people. However, this does not mean that age limits are arbitrary. This book extends the author's previous research on the Dutch juvenile criminal law, which was founded on the brain development of adolescents and has been in use for more than a decade. The role of age limits in death and life sentences in the US and the new cannabis legislation in Germany are also analyzed in depth. This project combines biological, psychological and social knowledge and puts forward a pragmatic proposal to connect the two fields of brain development and law. It will be of interest to researchers, professionals (e.g. judges, legislators) and students alike.

Thinking Bodies - Shaping Hands Yannis Hadjinicolaou, 2019-08-12 Thinking Bodies - Shaping Hands focuses on the critical as well as historical dimension of the handling of the brush and of the resulting appearance of colour on the painted surface in art and art theory from the middle of the 17th (above all from 1660) to the dawn of the 18th century in the Netherlands. More specifically, it deals with Rembrandt's last pupils such as Arent de Gelder. „Handeling” describes an active, embodied process that is connected to the motion of the hand with the brush or with any other kind of tool. This term, up to now not sufficiently appreciated in scholarly literature, seems to be fruitful in this context. It is not so much connected with the term „style”, as with a prior step, which is equivalent to „manner”. At the same time, its meaning in Dutch till today is „action”. „Handeling” is an act that could be described as a „form-act”. It focuses on Formgestaltung, in which these actions themselves are understood as processes. Examining the „Rembrandtist ideology of painting”, this study attempts to reveal the embodied process of painting in the sense of a bodily articulation during the application of colour. This occurs within the productive tension between theory and practice.
