Sam Dobin

Elementary Statistics for Geographers James E. Burt, Gerald M. Barber, David L. Rigby, 2009-03-19 Introduces the techniques and concepts of statistics in human and physical geography. This book explains not only how to apply quantitative tools but also why and how they work. It helps students gain important skills for utilizing conventional and spatial statistics in their own research, as well as for critically evaluating the work of others.

United States Income, Wealth, Consumption, and Inequality Diana Furchtgott-Roth, 2020-08-01 Over the past 75 years, household income in the United States has increased substantially. Still, by some measures, income inequality has increased as well. This has been the subject of contested public policy and political discourse. The question still stands: How can we better articulate the nuanced changes in American incomes? It is difficult to have conversations about income inequality without an agreed-upon set of terms, metrics, and concepts. *United States Income, Wealth, Consumption, and Inequality*, edited by Diana Furchtgott-Roth, examines the trends in income growth in the United States and explores various measures of income, including market, post-tax, and post-transfer income. Within each chapter, distinguished experts explain how income and wealth--and the way we measure them--have changed in the United States, which demographic groups have benefited from these changes, and how mobility has changed over time and over generations. Specific chapters explain the roles of gender and race. The resulting book is relevant to modern international policy, particularly in light of the COVID-19 pandemic, and addresses what can be done to increase economic mobility in the United States.

Calculating the Extended Gini Coefficient from Grouped Data - a Covariance Presentation Edna Schechtman, Shlomo Yitzhaki, 2014 The basic approach to estimating the Gini and extended Gini indices is to approximate the Lorenz curve by a number of linear segments, and then estimate the Gini coefficients as the areas (or weighted areas) between the linear segments and the 45-degree line. We show that the estimator for the extended Gini, obtained from the Lorenz curve (Chotikapanich and Griffiths, 2001) is algebraically identical to a covariance-based estimator. The advantages of the covariance-based estimators are twofold; first, they are easy to compute, using any standard statistical software, and second, the covariance-based estimators allow for the decomposition of the Gini index of a sum of variables (or populations).

Income Distribution During System Reform and Economic Development in China Zongsheng Chen, Yunbo Zhou, 2005 The book is concerned with research on income distribution inequality of Chinese residents in the last 20 years of the 20th century and the beginning of the 21th century. Measuring and making clear the status of inequality of every consisting parts of normal income of Chinese residents is an important concept. First, on the basis of the statistical data and the estimated data, as well as several kinds of methods that are used to calculate income inequality and suited for the available data, the authors computed the population-income Gini Coefficients of normal income inequality respectively for China's national, urban and rural areas. Second, by using urban/rural income ratio, Theil index and others, they measured the status and trends of Chinese urban/rural gap and regional income disparity, as well as their influence on the whole income inequality. Third, by case study and decomposition analysis some main factors, which had impacts on income inequality of urban and rural residents in China, and their influence, were researched. Fourth, the authors studied and measured the status and changes of the poor population and poverty rates in rural and urban areas in China. Fifth, the trend of inequality of normal income of Chinese residents was predicted at large, and the status of distribution inequality of Chinese residents was judged.

Social Inequality Kathryn Neckerman, 2004-06-18 Inequality in income, earnings, and wealth has risen dramatically in the United States over the past three decades. Most research into this issue has focused on the causes—global trade, new technology, and economic policy—rather than the consequences of inequality. In *Social Inequality*, a group of the nation's leading social scientists opens a wide-ranging inquiry into the social implications of rising economic inequality. Beginning with a critical evaluation of the existing research, they assess whether the recent run-up in economic inequality has been accompanied by rising inequality in social domains such as the quality of family and neighborhood life, equal access to education and health care, job satisfaction, and political participation. Marcia Meyers and colleagues find that many low-income mothers cannot afford market-based child care, which contributes to inequality both at the present time—by reducing maternal employment and family income—and through the long-term consequences of informal or low-quality care on children's educational achievement. At the other end of the educational spectrum, Thomas Kane links the growing inequality in college attendance to rising tuition and cuts in financial aid. Neil Fligstein and Taek-Jin Shin show how both job security and job satisfaction have decreased for low-wage workers compared with their higher-paid counterparts. Those who fall behind economically may also suffer diminished access to essential social resources like health care. John Mullahy, Stephanie

Robert, and Barbara Wolfe discuss why higher inequality may lead to poorer health: wider inequality might mean increased stress-related ailments for the poor, and it might also be associated with public health care policies that favor the privileged. On the political front, Richard Freeman concludes that political participation has become more stratified as incomes have become more unequal. Workers at the bottom of the income scale may simply be too hard-pressed or too demoralized to care about political participation. *Social Inequality* concludes with a comprehensive section on the methodological problems involved in disentangling the effects of inequality from other economic factors, which will be of great benefit to future investigators. While today's widening inequality may be a temporary episode, the danger is that the current economic divisions may set in motion a self-perpetuating cycle of social disadvantage. The most comprehensive review of this quandary to date, *Social Inequality* maps out a new agenda for research on inequality in America with important implications for public policy.

The Abbot and his Peasants Katherine Brun, 2016-09-26 Der Abt und seine Bauern. Territorialisierung als Prozess in Salem vom Späten Mittelalter bis zum Dreißigjährigen Krieg Die Studie über die reichsunmittelbare Zisterzienserabtei Salem eröffnet neue Einsichten über grundlegende politische Entwicklungen in der Frühen Neuzeit. Sie beleuchtet die Möglichkeiten und die Grenzen kirchlicher Herrschaft und weist auf breiter Quellengrundlage den dauerhaften politischen Einfluss der Bauernschaft nach. In der untersuchten Periode von 1473 bis 1637 festigte die Abtei ihre politische Herrschaft über Land und Leute. Im Zuge der Territorialisierung verdichtete sie verschiedene Herrschaftsrechte in ihrer Hand und schloss das Herrschaftsgebiet ab. Dies wurde auf zwei Ebenen erreicht: Erstens wurden die Grenzen des Territoriums gegen Außen eindeutig definiert - in räumlich-physischer, rechtlicher und symbolischer Hinsicht. Zweitens wurden die Untertanen vollständig in das eigene Territorium integriert. Diesen Prozess kann man jedoch nicht einfach als Staatsbildung von oben - durch die Aktivitäten der Abtei - charakterisieren. Deren Herrschaft wurde zwar gestärkt und zentralisiert, aber durchaus nicht vornehmlich auf Kosten der Bauernschaft. Deren materielle Bedürfnisse und Interessen wurden aufgegriffen, so dass gegenseitige Vergleiche zustande kamen. Das Beispiel Salem zeigt das Moment politischer Inklusion auf einer breiten sozialen Basis. Durch kleinteiliges Agieren und auf dem Wege direkter Kommunikation brachten sich die kommunalen Entscheidungsträger aus der Bauernschaft wirkungsvoll ein. So entwickelte sich die Herrschaft in der Abtei aufgrund interaktiver Prozesse fort. Wir begegnen also in der Arbeit vielseitigen Aushandlungsprozessen, bei denen sowohl wechselnde Bündnisse und ungleiche Partnerschaften als auch das Prinzip der Gegenseitigkeit sowie direkte Kooperation zwischen sozialen Gruppen mitwirkten. Dieses Primat des Verhandlungsprinzips brachte wechselseitige Vorteile, nicht weil die sozialen Gruppen von vornherein gemeinsame Interessen hatten, sondern da sich Kommunikationskanäle öffneten und Konflikte abschwächen. Die Kommunikation im Territorium lief über zwei zentrale Institutionen, das Sidelgericht, und das Verhör. Diese beiden Körperschaften vermochten es, nicht nur Konflikte zu dämpfen und diverse soziale Gruppen zu integrieren, sondern auch deren

Anliegen zu berücksichtigen, und hier lag das Fundament der bemerkenswerten politischen und sozialen Stabilität in Salem. So ist dieses kleine Territorium ein Beispiel dafür, wie ein erfolgreiches Gemeinwesen vorgeht, wie es ständig neue Ziele entwickelt und sich dabei selbst erhält. Durch diese Forschungsarbeit über Salem werden die Potenziale und Grenzen der Staatsbildung im Reich grundlegend beleuchtet, sie zeigt auf, wie die Beziehungen zwischen Herren und Untertanen in der Frühen Neuzeit miteinander verflochten waren.

OECD Studies on Tourism Measuring and Monitoring the Sustainability of Tourism at Regional Level in Spain Indicator Framework and Compilation Guide OECD, 2024-10-11 Tourism is a cornerstone of Spain's economy and a key driver of regional development. This report presents indicators to monitor tourism sustainability in Andalusia, Catalonia, Navarra, and the Region of Valencia, building on existing frameworks and good practices at international, national and regional level. A set of 30 indicators and 57 metrics is informed by key policy issues and priorities identified in existing tourism strategies and measurement frameworks in the four regions. They cover economic benefits, seasonality, local resident perceptions, accessibility, climate change mitigation and water management. A sub-set of ten 'priority' metrics has also been identified to monitor key policy issues and help prioritise action towards sustainable development. The report highlights avenues for future development to refine indicator methodologies and close existing data gaps on central policy issues such as cultural heritage, greenhouse gas emissions, waste and digitalisation.
