Mapping Forest Landscape Patterns Tarmo K. Remmel, Ajith H. Perera, 2017-09-07 This book explores the concepts, premises, advancements, and challenges in quantifying natural forest landscape patterns through mapping techniques. After several decades of development and use, these tools can now be examined for their foundations, intentions, scope, advancements, and limitations. When applied to natural forest landscapes, mapping techniques must address concepts such as stochasticity, heterogeneity, scale dependence, non-Euclidean geometry, continuity, non-linearity, and parsimony, as well as be explicit about the intended degree of abstraction and assumptions. These studies focus on quantifying natural (i.e., non-human engineered) forest landscape patterns, because those patterns are not planned, are relatively complex, and pose the greatest challenges in cartography, and landscape representation for further interpretation and analysis.

OECD Regional Development Studies Redefining Territories The Functional Regions OECD, 2002-04-17 This publication reports on current definitions and uses of functional regions in the OECD countries. It sets forth the reasons that prompt countries to formulate such entities, takes stock of responsibilities and prerogatives existing at these echelons, and tallies their financial resources.

Introduction to Geopolitics Colin Flint, 2012-07-26 This clear and concise introductory textbook guides students through their first engagement with geopolitics. It offers a clear framework for understanding contemporary conflicts by showing how geography provides opportunities and limits upon the actions of countries, national groups, and terrorist organizations. This second edition is fundamentally restructured to emphasize geopolitical agency, and non-state actors. The text is fully revised, containing a brand new chapter on environmental geopolitics, which includes discussion of climate change and resource conflicts. The text contains updated case studies, such as the Korean conflict, Israel-Palestine and Chechnya and Kashmir, to emphasize the multi-faceted nature of conflict. These, along with guided exercises, help explain contemporary global power struggles, environmental geopolitics, the global military actions of the United States, the persistence of nationalist conflicts, the changing role of borders, and the new geopolitics of terrorism, and peace movements. Throughout, the readers are introduced to different theoretical perspectives, including feminist contributions, as both the practice and representation of geopolitics are discussed. Introduction to Geopolitics is an ideal introductory text which provides a deeper and critical understanding of current affairs, geopolitical structures and agents. The text is extensively

illustrated with diagrams, maps, photographs and end of chapter further reading. Both students and general readers alike will find this book an essential stepping-stone to understanding contemporary conflicts.

The Rise of the English Regions? Irene Hardill,Paul Benneworth,Mark Baker,Leslie Budd,2006-10-03 A critical look at regional development and governance, examining the causes of the South-East domination and comparing each region in terms of its characteristics and its experience of devolution.

Functional Neuroradiology Scott H. Faro,Feroze B. Mohamed,Meng Law,John T. Ulmer,2011-09-08 Functional Neuroradiology: Principles and Clinical Applications, is a follow-up to Faro and Mohamed's groundbreaking work, Functional (BOLD)MRI: Basic Principles and Clinical Applications. This new 49 chapter textbook is comprehensive and offers a complete introduction to the state-of-the-art functional imaging in Neuroradiology, including the physical principles and clinical applications of Diffusion, Perfusion, Permeability, MR spectroscopy, Positron Emission Tomography, BOLD fMRI and Diffusion Tensor Imaging. With chapters written by internationally distinguished neuroradiologists, neurologists, psychiatrists, cognitive neuroscientists, and physicists, Functional Neuroradiology is divided into 9 major sections, including: Physical principles of all key functional techniques, Lesion characterization using Diffusion, Perfusion, Permeability, MR spectroscopy, and Positron Emission Tomography, an overview of BOLD fMRI physical principles and key concepts, including scanning methodologies, experimental research design, data analysis, and functional connectivity, Eloquent Cortex and White matter localization using BOLD fMRI and Diffusion Tensor Imaging, Clinical applications of BOLD fMRI in Neurosurgery, Neurology, Psychiatry, Neuropsychology, and Neuropharmacology, Multi-modality functional Neuroradiology, Beyond Proton Imaging, Functional spine and CSF imaging, a full-color Neuroanatomical Brain atlas of eloquent cortex and key white matter tracts and BOLD fMRI paradigms. By offering readers a complete overview of functional imaging modalities and techniques currently used in patient diagnosis and management, as well as emerging technology, Functional Neuroradiology is a vital information source for physicians and cognitive neuroscientists involved in daily practice and research.

River Road Gerald Friesen,1996-12-03 The prairies are a focal point for momentous events in Canadian history, a place where two visions of Canada have often clashed: Louis Riel, the Manitoba School Question, French language rights, the 1919 Winnipeg General Strike, and the dramatic collapse of the Meech Lake Accord when MLA Elijah Harper voted "No."Gerald Friesen believes that it is the responsibility of the historian to "tell local stories in terms and concepts that make plain their intrinsic value and worth, that explain the relationship between the past and the present." For local experiences to have any relevant meaning, they must be put into the context of the wider world.These essays were written for the general reader and the academic historian. They include previously published works (many of them revised and updated) from a wide variety of

sources, and new pieces written specifically for River Road, examining aspects of prairie and Manitoba history from many different perspectives. They offer portraits of representatives from different sides of the prairie experience, such as Bob Russell, radical socialist and leader of the 1919 General Strike, and J.H. Riddell, conservative Methodist minister who represented “sane and safe” stewardship in the 1920s and 1930s. They explore the changing relationship between Aboriginal peoples and the “dominant” society, from the prosperous Metis community that flourished along the Red River in the 19th century (and produced Manitoba’s first Metis premier) to the events that led to the Manitoba Aboriginal Justice Inquiry in the 1980s. Other essays consider new viewpoints of the prairie past, using the perspectives of ethnic and cultural history, women’s history, regional history, and labour history to raise questions of interpretation and context. The time frame considered is equally wide-ranging, from the Aboriginal and Red River society to the political arena of current constitutional debates.

OECD Rural Policy Reviews Rural-Urban Partnerships An Integrated Approach to Economic Development

OECD, 2013-10-24 This report provides a framework to understand the changing relationships between urban and rural areas. Specifically, it documents the characteristics of these partnerships and the factors that can hinder as well as enable rural-urban co-operation.

Stochastic Processes and Functional Analysis Alan C. Krinik, Randall J. Swift, 2004-03-23 This extraordinary compilation is an expansion of the recent American Mathematical Society Special Session celebrating M. M. Rao's distinguished career and includes most of the presented papers as well as ancillary contributions from session invitees. This book shows the effectiveness of abstract analysis for solving fundamental problems of stochastics

Evolutionary Neuroscience Jon H Kaas, 2020-05-30 Evolutionary Neuroscience, Second Edition, is a collection of chapters on brain evolution that combines selected topics from the recent comprehensive reference, Evolution of Nervous Systems (Elsevier, Academic Press, 2017, 9780128040423). The selected chapters cover a broad range of topics, from historical theory, to the most recent deductions from comparative studies of brains. The articles are organized in sections focused on history, concepts and theory, the evolution of brains from early vertebrates to present-day fishes, amphibians,

reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. - Provides the most comprehensive, authoritative and up-to-date single volume collection on brain evolution - Presents a full color treatment, with many illustrations - Written by leading scholars and experts - Features chapters on brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, and other parts of brains - Discusses what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains

Creative Knowledge Cities Marina Van Geenhuizen, Peter Nijkamp, 2012-04-01 This book pragmatically explores the myths, concepts, policies, key conditions and tools for enhancing creative knowledge cities. The authors provide a critical reflection on the reality of city concepts including university-city alignment for campus planning, labour market conditions, social capital and proximity, triple helix based transformation, and learning by city governments. Original examples from both the EU and US are complemented by detailed case studies of cities including Rotterdam, Vienna and Munich. The book also examines the reality of knowledge cities in emerging economies such as Brazil and China, with a focus on institutional transferability. Key conditions addressed include soft infrastructure, knowledge spillovers among firms and the connectivity of cities via transport networks to allow the creation of new hubs of knowledge-based services.

Functional Organization of Brain Stem Respiratory Complex in the Cat Pei Chin Tang, 1967 A study was made on the roles of the Hering-Breuer reflex, the pneumotaxic center, the apneustic center, and the medullary respiratory center in the regulation of rate and depth of respiration in response to changes in blood concentration of CO₂ and O₂. Integrated phrenic nerve discharge, abdominal respiratory movement, and intra-abdominal and intratracheal pressures were recorded in decerebrate cats as they breathed air, 5% CO₂, 7% CO₂, 10% O₂ and 100% O₂. By using decerebrate cats as control, results from vagotomy, pneumotaxic center ablation, and brain stem transection, alone or in combination, indicate: (1) Hering-Breuer reflex controls respiratory rate and in the absence of pneumotaxic center, maintains a constant depth; (2) pneumotaxic center controls respiratory depth and in the absence of Hering-Breuer reflex, maintains a constant rate; (3) apneustic center provides maximum respiratory depth and prolonged inspiratory duration so that rate can be regulated by Hering-Breuer reflex and depth by pneumotaxic center; (4) medullary respiratory center serves as a final pathway and integration center of the impulses from the higher centers. (Author).

Textbook of Stereotactic and Functional Neurosurgery Andres M. Lozano, Andres M.. Lozano, Philip L. Gildenberg, Ronald

R. Tasker, 2009-06-22 This book covers stereotactic principles as well as functional stereotaxis, covering the history and uses of the techniques, treatments for specific conditions, and future developments. Includes a DVD demonstrating surgical procedures.

Functional-Historical Approaches to Explanation Tim Thornes, Erik Andvik, Gwendolyn Hyslop, Joana Jansen, 2013-07-25 Contributions from both well-known practitioners and new voices in the areas of language typology, historical linguistics, and function-based approaches to language description define this volume, as does its foci in two major geographical areas — southeast Asia and northwestern North America. All of the papers appeal, in one way or another, to functional-historical approaches to explanation. Behind this appeal lies an assumption that languages are selective in their development in ways that are dependent upon the communicative tasks to which they are put. As such, language function accounts for both variation and historical development over time.

Brain Connectivity Analysis: Investigating Brain Disorders Barry Horwitz, Silvina G. Horovitz, In the last few years, advances in human structural and functional neuroimaging (fMRI, PET, EEG/MEG) have resulted in an explosion of studies investigating the anatomical and functional connectivity between different regions of the brain. More and more studies have employed resting and task-related connectivity analyses to assess functional interactions, and diffusion-weighted tractography to study white matter organization. Many of these studies have addressed normal human function, but recently, a number of investigators have turned their attention to examining brain disorders. The study of brain disorders is a complex endeavor; not only does it require understanding the normal brain, and the regions involved in a particular function, but also it needs a deeper understanding of brain networks and their dynamics. This Research Topic will provide the scientific community with an overview of how to apply connectivity methods to study brain disease, and with perspectives on what are the strength and limitations of each modality. For this Research Topic, we solicit both reviews and original research articles on the use of brain connectivity analysis, with non-human or human models, to explore neurological, psychiatric, developmental and neurodegenerative disorders from a system perspective. Connectivity studies that have focused on one or more of the following will be of particular interest: (1) detection of abnormal functional/structural connectivity; (2) neural plasticity, assessed by changes in connectivity, in patients with brain disorders; (3) assessment of therapy using connectivity measures; (4) relation of connectivity changes to behavioral changes.

Functional and Constraint Logic Programming Herbert Kuchen, 2011-07-12 This book constitutes the refereed conference proceedings of the 20th International Workshop on Functional and Constraint Logic Programming, WFLP 2011, held in Odense, Denmark, in July 2011 as Part of the 13th International Symposium on Principles and Practice of Declarative Programming (PPDP 2011), the 22st International Symposium on Logic-Based Program Synthesis and Transformation (LOPSTR 2011), and the 4th International Workshop on Approaches and Applications of Inductive Programming (AAIP 2011).

From the 10 papers submitted, 9 were accepted for presentation the proceeding. The papers cover current research in all areas of functional and logic programming as well as the integration of constraint logic and object-oriented programming, and term rewriting.
