Consuming the Environment Myra J. Hird,2024-11-29 Consuming the Environment explores the environmental impacts of consuming everyday products and explains how we can consume more sustainably. Written in an accessible style, this book begins with our everyday mundane experiences of consuming products – online, in the grocery store, at the mall – and shows how these practices are connected to a global system dependent upon ever increasing consumption. Drawing on the expertise of researchers in topics such as energy, food, water, land, fashion, electronics, eco-tourism, green products, and (micro)plastics, this volume unpacks the complex and largely invisible relationships that consumerism has with resource extraction and manufacturing. By focusing on a diverse range of everyday consumer products, as well as more subtle things

that have been transformed into products, such as knowledge, waste, and pets, the chapters are structured around the central argument that we must re-orient ourselves as citizens rather than consumers. It is as citizens that we may help to organize our communities and hold our governments and industry accountable to planetary sustainability boundaries. With the inclusion of summary boxes, directed discussion, assignment questions, and further reading in each chapter, this book will be an essential resource for undergraduate and postgraduate students studying courses on consumerism, sustainable consumption, and environmental sociology.

The Charisma Machine Morgan G. Ames,2019-11-19 A fascinating examination of technological utopianism and its complicated consequences. In The Charisma Machine, Morgan Ames chronicles the life and legacy of the One Laptop per Child project and explains why—despite its failures—the same utopian visions that inspired OLPC still motivate other projects trying to use technology to "disrupt" education and development. Announced in 2005 by MIT Media Lab cofounder Nicholas Negroponte, One Laptop per Child promised to transform the lives of children across the Global South with a small, sturdy, and cheap laptop computer, powered by a hand crank. In reality, the project fell short in many ways—starting with the hand crank, which never materialized. Yet the project remained charismatic to many who were captivated by its claims of access to educational opportunities previously out of reach. Behind its promises, OLPC, like many technology projects that make similarly grand claims, had a fundamentally flawed vision of who the computer was made for and what role technology should play in learning. Drawing on fifty years of history and a seven-month study of a model OLPC project in Paraguay, Ames reveals that the laptops were not only frustrating to use, easy to break, and hard to repair, they were designed for "technically precocious boys"—idealized younger versions of the developers themselves—rather than the children who were actually using them. The Charisma Machine offers a cautionary tale about the allure of technology hype and the problems that result when utopian dreams drive technology development.
