Resources for Teaching Elementary School Science National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution,1996-03-28 What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a leaf safari for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in *Resources for Teaching Elementary School Science*. A completely revised edition of the best-selling resource guide *Science for Children: Resources for Teachers*, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. (Companion volumes for middle and high school are planned.) The guide annotates about 350 curriculum packages, describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits or suggested equipment, and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to: Ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area—Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science—and by type—core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books, and magazines that will help teachers enhance their students' science education. *Resources for Teaching Elementary School Science* also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers give names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher

organizations and parents.

Oceanic Anglerfishes Theodore W. Pietsch,2009 In the realm of ichthyological literature, it would be hard to find more fascinating creatures than the football fishes, pugnose dreamers, mischievous dreamers, and snaggletooth seadevils, (not to mention triplewart, needlebeard, and whipnose seadevils), but they're all here in Oceanic Anglerfishes. In this comprehensive study, you will learn that most of the species are smaller than your hand; most have a bioluminescent lure that may be employed to attract prey into gobbling range; and that the relatively tiny males affix themselves to the females, assuring permanent sexual contact in the blackness of the depths. This is a brilliantly illuminated viewing port into the world of deep-sea creatures, bringing into sharp focus fishes whose weird appearance, habits, and lifestyles stretch the imagination to the point of near unbelievability.--Richard Ellis, author of The Book of Sharks and Encyclopedia of the Sea Ceratioid anglerfishes are classical deep-sea fishes that display a vast array of bizarre and wonderful behaviors and associated morphological adaptations that are almost beyond our ability to imagine. Their first dorsal fin spine has been modified into a fishing rod (the illicium) ending in a fleshy bait (the esca) and they show extreme sexual dimorphism with tiny males with huge nostrils and modified pincer-like jaws to attach themselves to a female, sometimes permanently. Ted Pietsch describes in great detail the 11 families, 35 genera, and 160 known species of deep-sea anglerfishes in his splendidly illustrated monograph based on research that began with finding the first ceratioid washed ashore in Greenland in 1833 and continues through Pietsch's 40-year career of studying these fascinating fishes.--Bruce B. Collette, National Marine Fisheries Service Systematics Laboratory, National Museum of Natural History, Smithsonian Institution

Connecting with Our Ancestors: Human Evolution Museum Experiences Shelley L. Smith, 2024-09-29 This book combines documentation and analysis of the contents of exhibits in 12 museums (Part 1) with interviews with experts involved in the creation of exhibits (Part 2) to explore variation in human evolution exhibits. To be successful, museum exhibits must make a personal connection with visitors, inspiring them to learn more. Human evolution exhibits thus need contemporary relevance. It is crucial to find ways to bind our deep past to our lives today. Presenting our story, and our collective history, some human evolution exhibits reach an audience of millions each year. An understanding of evolution is fundamental to modern biology, and a lack of knowledge of basic principles has practical consequences, including impairing reception of health messages. The goal of the volume is to stimulate discussion of how the presentation of evolution, and in particular human evolution, can be improved, contributing to scientific literacy and engagement with evolutionary science. To enhance relevance to a broader public, the author argues that incorporation of evolutionary medicine and clearer explanations of ancestry and human biological variation are needed. The surveyed museums include four in Texas, the

author's home state, seven additional renowned U.S. museums, and the Natural History Museum in London. Some of the 35 interviewees are prominent academic researchers; other contribute their expertise in design, art, and education. Topics discussed include exhibit content and changing exhibits, the ideal vs. reality in exhibit creation, self-assessments of exhibits, education and "edutainment," and exhibit content intersections with religion, politics, and the history of representations of race / human biological variation. A bibliographic essay, appendices, and text boxes provide additional information for readers desiring more in-depth study. This volume is of interest to a wide range of readers in anthropology, museum studies, and science communication.

Threadfins of the World (family Polynemidae) Hiroyuki Motomura, Food and Agriculture Organization of the United Nations, 2004-01-01 This is the third in the FAO series of worldwide annotated and illustrated catalogues of major groups of organisms that enter marine fisheries. It covers the family Polynemidae (threadfins), including 41 species belonging to 8 genera, which is important in commercial and sport fisheries of tropical and subtropical seas, especially in the Middle and Near East, South Asia, Southeast Asia, Oceania and West Africa. It includes a review of habitat and fisheries of the family; a glossary of technical terms; an illustrated key to each genus and all species; and a detailed account for all species, including an illustration of each species, scientific and vernacular names, and information on habitat, biology, fisheries, size, relevant literature and distribution.

Reptile Biodiversity Roy W. McDiarmid, 2012-01-10 "Authoritative and comprehensive—provides an up-to-date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles. All biodiversity scientists will want to have it during project planning and as study progresses. A must for field biologists, conservation planners, and biodiversity managers."—Jay M. Savage, San Diego State University "Kudos to the editors and contributors to this book. From the perspective of a non-ecologist such as myself, who only occasionally needs to intensively sample a particular site or habitat, the quality and clarity of this book has been well worth the wait."—Jack W. new pelican guide to english literature from orwell to naipaul - Aug 03 2022

web jan 1 1999 this is a well narrated and very interesting book crammed with cultural social and literary vignettes relating to the period being covered as a source book it is well researched and clearly organised for the student but as a simple historical narrative of key 20th century literature it does its job without fanfare and in a very interesting manner
