Climate and Land Degradation Ndegwa Ndiang'ui,2007-08-28 Based on an International Workshop held in Arusha, Tanzania, this book presents state-of-the-art papers, real world applications, and innovative techniques for combating land degradation. It offers recommendations for effectively using weather and climate information for sustainable land management practices.

Parliamentary Debates, House of Representatives, Weekly Hansard Australia. Parliament. House of Representatives,1971

Collapse Jared Diamond,2011-01-04 In Jared Diamond's follow-up to the Pulitzer-Prize winning Guns, Germs and Steel, the author explores how climate change, the population explosion and political discord create the conditions for the collapse of civilization. Diamond is also the author of Upheaval: Turning Points for Nations in Crisis Environmental damage, climate change, globalization, rapid population growth, and unwise political choices were all factors in the demise of societies around the world, but some found solutions and persisted. As in Guns, Germs, and Steel, Diamond traces the fundamental pattern of catastrophe, and weaves an all-encompassing global thesis through a series of fascinating historical-cultural narratives. Collapse moves from the Polynesian cultures on Easter Island to the flourishing American civilizations of the Anasazi and the Maya and finally to the doomed Viking colony on Greenland. Similar problems face us today and have already brought disaster to Rwanda and Haiti, even as China and Australia are trying to cope in innovative ways. Despite our own society's apparently inexhaustible wealth and unrivaled political power, ominous warning signs have begun to emerge even in ecologically robust areas like Montana. Brilliant, illuminating, and immensely absorbing, Collapse is destined to take its place as one of the essential books of our time, raising the urgent question: How can our world best avoid committing ecological suicide?

The Nature of Northern Australia John Woinarski,Brendan Mackey,Henry Nix,Barry Traill,2007-07-01 Northern Australia stands out as one of the largest natural areas remaining on Earth - alongside such global treasures as the Amazon rainforests, the boreal conifer forests of Alaska and Canada, and the polar wilderness of Antarctica. Nature remains in abundance in 'the North'. Its intact tropical savannas, rainforests, and free flowing rivers provide a basis for much of the economic activity and the quality of life for residents of the area. THE NATURE OF NORTHERN AUSTRALIA details the latest science on the Northern environment. With increasing debate over the future of Australias often forgotten North, this is a timely examination of its environmental significance, the ecological processes that make it function, and the economies that are compatible with maintaining healthy communities and people and healthy country into the future.
