Principles of Pharmacology David E. Golan, 2008 This primary textbook for a first course in pharmacology offers an integrated, systems-based, and mechanism-based approach to understanding drug therapy. Each chapter focuses on a target organ system, begins with a clinical case, and incorporates cell biology, biochemistry, physiology, and pathophysiology to explain how and why different drug classes are effective for diseases in that organ system. Over 400 two-color illustrations show molecular, cellular, biochemical, and pathophysiologic processes underlying diseases and depict targets of drug therapy. Each Second Edition chapter includes a drug summary table presenting mechanism, clinical applications, adverse effects, contraindications, and therapeutic considerations. New chapters explain how drugs produce adverse effects and describe the life cycle of drug development. The fully searchable online text and an image bank are available on thePoint.

Drug Therapy in Nursing Diane S. Aschenbrenner, Samantha J. Venable, 2009 This text presents a totally nursing-focused framework for teaching and learning nursing pharmacology, and places the patient at the center of all drug administration decisions and considerations. The book presents core drug knowledge using prototypes of different drug classes and emphasizes core patient variables that influence the patient's response to therapy. This thoroughly updated Third Edition covers newly approved drugs, has separate chapters on drugs affecting fungal and viral infections, and includes more pathophysiology information. FDA Black Box warnings have been added to the discussion of each prototype when applicable, and safety alerts have been added to emphasize prevention of common medication errors. A companion Website offers student and instructor ancillaries including NCLEX®-style questions, pathophysiology animations, medication administration videos, and dosage calculation quizzes.

Pharmacology Miles Hacker, William S. Messer, Kenneth A. Bachmann, 2009-06-19 *Pharmacology* meets the rapidly

emerging needs of programs training pharmacologic scientists seeking careers in basic research and drug discovery rather than such applied fields as pharmacy and medicine. While the market is crowded with many clinical and therapeutic pharmacology textbooks, the field of pharmacology is booming with the prospects of discovering new drugs, and virtually no extant textbook meets this need at the student level. The market is so bereft of such approaches that many pharmaceutical companies will adopt Hacker et al. to help train new drug researchers. The boom in pharmacology is driven by the recent decryption of the human genome and enormous progress in controlling genes and synthesizing proteins, making new and even custom drug design possible. This book makes use of these discoveries in presenting its topics, moving logically from drug receptors to the target molecules drug researchers seek, covering such modern topics along the way as side effects, drug resistance, pharmacogenomics, and even nutraceuticals, one in a string of culminating chapters on the drug discovery process. The book is aimed at advanced undergraduates and beginning graduate students in medical, pharmacy, and graduate schools looking for a solid introduction to the basic science of pharmacology and envisioning careers in drug research. - Uses individual drugs to explain molecular actions - Full color art program explains molecular and chemical concepts graphically - Logical structure reflecting the current state of pharmacology and translational research - Covers such intricacies as drug resistance and cell death - Consistent format across chapters and pedagogical strategies make this textbook a superior learning tool
