*Improving the Clinical Effectiveness of Metagenomic Next Generation Sequencing (mNGS) in Infection Disease Diagnosis and Treatment: Linking the NGS Specialists and Clinicians, volume II* Beiwen Zheng,2023-12-28

Timely and accurate pathogen diagnosis is critical for effective treatment, outbreak prevention and precise antibiotics administration of infectious diseases, which remains a challenge in clinical practice. Metagenomic next generation sequencing (mNGS) allows researchers and laboratory specialists to analyze the mixed collection of sequencing reads in human clinical samples, including sequences from bacteria, viruses, fungi and parasites besides the host. This new technology shows great potential in pathogen diagnosis. The sensitivity and faster turnaround time are higher than conventional clinical microbiology tests, especially for fastidious and atypical pathogens. However, current mNGS based pathogen detection and diagnosis are facing challenges from both technical and practical aspects. First, sequencing noise can be introduced from different steps such as samples preparation, sequencing, data analysis and reporting algorithm. Also, the interpretation of the results such as detection limits and detection rates are not straightforward to clinicians, compared with traditional culture-based technologies. Such challenges and considerations should be fully addressed before the wild application of mNGS as a pathogen detection tool. Further, these clarifications might help to properly find the best clinical application scenarios, refine the medical treatments, and improve the clinical effectiveness of mNGS in complex infectious diseases. This Research Topic is focused on the application of mNGS for infectious diseases diagnosis and treatment, including experiment process and clinical usage. Its purpose is to level up the clarification of NGS process, to support the development of efficient experiment methods, data interpretation algorithms and to report good examples of related clinical applications. We hope this Research Topic could facilitate the discovery of novel methods and help NGS specialists and clinicians to know mutual concerns and

work together to improve the clinical effectiveness of mNGS.

**Mechanism and Pharmacodynamic Material Basis of Neurodegenerative Disease Therapies** Zhi Sun,Erxi Wu,Yi Wang,2023-08-25 Neurodegenerative diseases are debilitating disorders defined as loss of function or progressive destructing structure of the nervous system with high prevalence among the aging population. These diseases mainly include Alzheimer's disease (AD), Parkinson's disease (PD), Huntington's disease (HD), and amyotrophic lateral sclerosis (ALS). They are significantly associated with age and degeneration, becoming a devastating global health issue as a result of the growth of mean life expectancy worldwide. Few or no effective treatments are available for age-related neurodegenerative diseases, causing large socioeconomic and personal costs. The last 15 years have seen a boom in the use and integration of "omic" approaches (such as genomic, transcriptomic, epigenomic and metabolomic techniques) to study neurodegenerative disease in an unprecedented way. While, to date, no therapy based on these approaches is available to cure neurodegenerative diseases. Therefore, it is necessary to search for new, safe, and effective drug candidates and treatment strategies. In this Research Topic, our prime focus would be on the use and integration of "omic" approaches to study biomarkers, pathogenesis, disease progression and new therapeutic target of neurodegenerative diseases, so as to search for new, safe, and effective drug candidates.

**Crosstalk in Ferroptosis, Immunity & Inflammation** Qi Feng, Hua Zhong,Yu'e Liu,2025-04-17 Ferroptosis represents a critical form of regulated cell death, notable for its reliance on iron and its triggering by lipid peroxidation. The process becomes particularly significant in the context of inflammation, a crucial bodily response intended to tackle various threats and ensure tissue equilibrium. Issues arise when inflammation is uncontrolled, leading towards immune dysfunction and cellular demise. Current studies have further postulated that inflammation may instigate ferroptosis, releasing damage-associated molecular patterns (DAMPs) that activate the immune response and exacerbate inflammation. This bi-directional relationship highlights a complex interplay where ferroptosis and inflammation are both cause and consequence. This Research Topic aims to delineate the complex interactions between ferroptosis and inflammation, uncovering how this nexus influences disease treatment, particularly in inflammatory diseases and cancers. We intend to dissect the interaction between

ferroptosis and various immune cells and assess ferroptosis's role in conditions like infection, inflammation, and cancer. These insights are anticipated to reveal novel therapeutic avenues and advance the development of targeted medicinal interventions.

**Drug Discovery Stories** Bin Yu,Peng Zhan,2024-10-25 Drug Discovery Stories: From Bench to Bedside presents a collection of cases on the development of highly successful pharmaceuticals. It delves into the realm of drug discovery, exploring the structural biology and biological functions of the sought-after targets. The book covers the identification of promising compounds, their transformation from hits to leads through meticulous optimization, and the elucidation of how key compounds interact with the target (in essence, providing invaluable insights for drug design). Additionally, it covers essential information such as the pivotal biological and PK data of lead compounds, any noteworthy clinical results, and a comprehensive overview of other candidate compounds. The field of drug discovery and development has experienced rapid evolution, with numerous new drugs receiving approval each year. While several books have been published on this subject, there is a pressing need for a new book series that accurately reflects the current advancements in drug discovery. This book aims to not only cater to the drug discovery community but also engage other communities involved in chemical biology, synthetic chemistry, and pharmacology. - Analyzes the drug discovery stories of different blockbuster drugs - Includes the newly approved drugs - Covers key aspects related to the drug development of the drugs

**Pharmacokinetic-Pharmacodynamic Model of Drugs and Their Pharmacokinetic Differences between Normal and Disease States** Zipeng Gong,Ling Ye,Guo Ma,Kaustubh Kulkarni ,Yan-Fang Xian,2024-08-14 In the main frame of the above research topic, 16 contributions have been published including but not limited to the comparative pharmacokinetics between normal and disease status, the changes in the expression and function of drug-metabolizing enzymes and drug transporters in disease status and their related regulatory mechanisms, ADME/toxicity of drugs as well as their regulation, drug-drug interactions mediated by nuclear receptors, transporters and metabolic enzymes based on the methods and techniques of pharmacokinetics, transcriptomics, and metabolomics. However , the pharmacokinetic study is not only crucial in the development of new drugs, but also the study of pharmacokinetic-pharmacokinetic(PK-PD) model plays an important role in the process of new drug development. PK-PD model can reveal the internal relationship between drug concentration and effect, help to understand the dynamic characteristics of the drug action site in vivo and deduce the action site producing effect and drug concentration at the action site, which enables researchers to recognize the comprehensive characteristics of drug PK and PD processes in vivo. However, preclinical pharmacokinetic data are mainly derived from

healthy animals, which is unreasonable. On the one hand, patients are the final consumers of drugs because drugs are mainly used to treat patients with diseases. On the other hand, whether the body is in a pathological state and the severity of the disease have different effects on the ADMEof drugs, which is closely related to whether the clinical drug is safe and effective. Therefore, studying the pharmacokinetics and PK-PD model in disease states is more meaningful and clinically relevant.
