Strangely Rhetorical Jimmy Butts, 2023-05-01 Strangely Rhetorical establishes the groundwork for strangeness as a lens under the broader interdisciplinary umbrella of rhetoric and composition and shares a series of rhetorical devices for practically thinking about how compositions are made unique. Jimmy Butts explores how strange, novel, weird, and interesting texts work and offers insight into how and why these forms can be invented, created, and stylized to generate the effective delivery of rhetorical messages in fun, divergent ways. Using a new theoretical framework—that strangeness is inherent within all rhetorical interactions and is potentially useful—Butts demonstrates how rhetoric is always already coming from an Other, offering an ethical context for how defamiliarized texts work with different audiences. Applying examples of seven figures for composing in and across written, aural, visual, electronic, and spatial texts (the WAVES of media), Butts shows how divergence is possible in all sorts of refigured multimodal ways. Strangely Rhetorical rethinks what exactly rhetoric is and does, considering the ways that strange compositions help rhetors connect across a broad range of networks in a world haunted by distance. This is a book about strange rhetoric for makers and creatives, for students and teachers, and for composers of all sorts.

Basic Chemistry Concepts and Exercises John Kenkel, 2011-07-08 Chemistry can be a daunting subject for the uninitiated, and all too often, introductory textbooks do little to make students feel at ease with the complex subject matter. Basic Chemistry Concepts and Exercises brings the wisdom of John Kenkel's more than 35 years of teaching experience to communicate the fundamentals of chemistry in a practical, down-to-earth manner. Using conversational language and logically assembled graphics, the book concisely introduces each topic without overwhelming students with unnecessary

detail. Example problems and end-of-chapter questions emphasize repetition of concepts, preparing students to become adept at the basics before they progress to an advanced general chemistry course. Enhanced with visualization techniques such as the first chapter's mythical microscope, the book clarifies challenging, abstract ideas and stimulates curiosity into what can otherwise be an overwhelming topic. Topics discussed in this reader-friendly text include: Properties and structure of matter Atoms, molecules, and compounds The Periodic Table Atomic weight, formula weights, and moles Gases and solutions Chemical equilibrium Acids, bases, and pH Organic chemicals The appendix contains answers to the homework exercises so students can check their work and receive instant feedback as to whether they have adequately grasped the concepts before moving on to the next section. Designed to help students embrace chemistry not with trepidation, but with confidence, this solid preparatory text forms a firm foundation for more advanced chemistry training.

Strengthening International Regimes Daniel Serwer, 2024-03-25 This book is intended to examine the history of radiation protection up to the present from the perspective of regime theory, with a view to elucidating what this case teaches about how a strong regime in a controversial area can form and maintain itself. This is a particularly relevant issue at present when the overall international rules-based order is under threat and scientific authority doubted. There are significant parallels between the international radiation protection regime and efforts to slow climate change, stop the proliferation of nuclear weapons, manage the applications of artificial intelligence, control the use of drones, and confront the risks posed by pandemics. While each has its own dynamics, all these issues involve the interaction of scientific discovery and expertise with the societies that generate them. Learning what works and what does not is vital if we are to limit harm and ensure survival of humanity on a shrinking and warming planet.

The Memory Matrix Pasquale De Marco, 2025-04-07 In this captivating exploration of human memory, we embark on a journey through the corridors of the mind to unravel the mysteries of this extraordinary faculty. From the fleeting impressions of sensory memory to the enduring recollections of long-term memory, we delve into the intricate mechanisms of encoding, storage, and retrieval, uncovering the secrets of how memories are formed, stored, and accessed. Along the way, we encounter the challenges of forgetting, the complexities of memory distortion, and the remarkable resilience of memory in the face of adversity. We explore the latest findings on memory enhancement strategies, from ancient mnemonic devices to modern brain-training programs, empowering readers with practical techniques to improve their memory and cognitive skills. Our journey takes us to the frontiers of memory research, where scientists are using cutting-edge technologies to probe the depths of the brain and gain unprecedented insights into the neural underpinnings of memory. We discover the profound impact of memory on our lives, both individually and collectively, examining its role in shaping our personal narratives, our cultural identities, and our understanding of history. We delve into the ethical implications of memory manipulation and the potential of memory technologies to transform the human experience, raising questions about the

boundaries of human agency and the nature of memory itself. Through this exploration, we come to appreciate the extraordinary power of memory, its capacity to transport us across time and space, to connect us to others, and to give meaning to our lives. Yet, we also gain a deeper understanding of the challenges and limitations of memory, recognizing its susceptibility to distortion, decay, and loss. We learn to embrace both the joys and the sorrows of our past, acknowledging the role of memory in shaping our present and future. This book is an invitation to explore the depths of human memory, to unravel its mysteries, and to gain a deeper understanding of this remarkable faculty that defines our human experience. It includes all the material required to be learned for championships. The World Memory Championships is an organized competition of memory sports in which competitors memorize as much information as possible within a given period of time. The championship has taken place annually since 1991, with the exception of 1992. It was originated by Tony Buzan and co founded by Tony Buzan and Ray Keene. It continues to be organized by the World Memory Sports Council (WMSC), which was jointly founded by Tony Buzan and Ray Keene. In 2016, due to the dispute between some players and WMSC, the International Association of Memory (IAM) was launched From 2017 onward, both organizations have hosted their own world championships. The World Championships consist of ten different disciplines, where the competitors have to memorize as much as they can in a period of time: 1. One hour numbers (23712892....) 2. 5-minute numbers 3. Spoken numbers, read out one per second 4. 30-minute binary digits (011100110001001....) 5. One hour playing cards (as many decks of cards as possible) 6. 15-minute random lists of words (house, playing, orphan, encyclopedia....) 7. 15-minute names and faces 8. 5-minute historic dates (fictional events and historic years) 9. 15-minute abstract images (WMSC, black and white randomly generated spots) / 5-minute random images (IAM, concrete images) 10. Speed cards - Always the last discipline. Memorize the order of one shuffled deck of 52 playing cards as fast as possible.

Intermetallic Chemistry Riccardo Ferro, Adriana Saccone, 2011-08-26 Intermetallic science is closely related to physics, chemistry, metallurgy, materials science & technology, and engineering. This book emphasizes the chemical aspects of this science, and therefore the mutual reactivity of metals and the characteristics of intermetallic compounds. Topics included are: • Phase diagrams of alloy systems. Many intermetallic systems form several compounds, generally not obeying common simple stoichiometric rules, which are often homogeneous in a certain range of compositions. The stability and extension of these phases are conveniently presented through phase diagrams. • Selected aspects of intermetallics structural chemistry, with emphasis on the solid state. The general structural characteristics of intermetallic phases are considered, with attention to nomenclature and to alternative and complementary methods of presenting crystal-chemical data. A brief account is given of derivative and degenerate structures, modular aspects of crystal structures, and of a few special groups of alloys such as quasicrystals and amorphous alloys. A number of selected structural prototypes with typical features, their possible grouping in structural families and their distribution among different types of alloys are provided. • Intermetallic reactivity trends in the Periodic Table. Attention is given to a few selected elemental parameters such as electron configuration and valence electron number and to their changes along the Table, which act as reference factors of the intermetallic behaviour. As an example, the relationships are considered between crystal structure and the number of valence electrons per atom (or per

formula) in various classes of compounds or solid solution phases. • Alloying behaviour systematics of intermetallic systems with a description of the intermetallic reactivity of each element, or group of elements, in the order of their position in the Periodic Table. For each pair of metallic elements, their capability to form intermediate phases is summarised by maps and schemes. • A description of small scale preparation methods of intermetallics. A number of interesting and significant peculiarities are, e.g., those related to their high melting points, insolubility in common solvents, etc. • Systematic treatment of alloying behaviour. Wide overview of intermetallic chemistry. Illustrated, with many examples
