Network of Lies Brian Stelter, 2024-09-17 Fox News paid almost a billion dollars in legal settlements to bury the contents of this “essential...grinding, momentum-building” (The New York Times) account of the network's blatant attempts to manipulate the truth, mislead the public, and influence our elections—from the New York Times bestselling author of Hoax. The ongoing criminal trials of Donald Trump are also a trial for the nation he once led. We are undergoing a stress test of American democracy, the rule of law, and the very notion of a shared political reality. Can we achieve accountability for premeditated assaults on democracy and what forms should accountability take? In *Network of Lies*, New York Times bestselling author Brian Stelter answers these questions by weaving together private texts, unpublished emails, depositions, and other primary sources to tell the chilling story of Trump's alleged conspiracy to steal the 2020 election, and the right-wing media's mission to put him back in office in 2024. Trump couldn't have convinced millions of Americans of the Big Lie without Fox News. From the moment Joe Biden became president-elect in 2020, Fox hosts fueled a fire of misinformation and violence by spreading Trump's tales of election fraud and suppressing the truth. Come January, Sean Hannity insisted Trump needed to stop listening to “crazy people” who swore he could stay in power, but it was too late—thousands of Trump's

deluded followers had stormed the Capitol and Trump operatives had breached Dominion Voting Systems' voting machines in Georgia. Now, the 2020 lies are at the center of numerous indictments and his reelection campaign, but Trump is not the only one under fire. The once-untouchable Rupert Murdoch has been held accountable. Dominion's legal war, chronicled in-depth for the first time here, revealed that the ninety-two-year-old Fox chairman knew Trump's lies were dangerous but he allowed the lies to fill Fox's airwaves because, as his "pain sponge" Suzanne Scott admitted, telling the truth was "bad for business." Network of Lies goes inside the chat rooms, board rooms, and court rooms where the pro-Trump media's greed and selfishness were exposed. Featuring Stelter's "thorough and damning" (The New York Times) investigative prowess and direct quotations so shocking they read like fiction, Network of Lies is the definitive origin story of Trump's attempt to tear down the guardrails of American democracy, and an urgent plea to learn from past mistakes as we head into 2024's pivotal presidential election.

Burn Book Kara Swisher, 2024-02-27 Now including a new afterword! An instant New York Times bestseller from award-winning journalist Kara Swisher, Burn Book is a "highly readable...bawdy, brash, and compulsively thought-provoking" (Booklist, starred review) account of the tech industry and its founders who wanted to change the world but broke it instead. Part memoir, part history, Burn Book is a necessary chronicle of tech's most powerful players. From "the queen of all media" (Walt Mossberg, The Wall Street Journal), this is the inside story we've all been waiting for about modern Silicon Valley and the biggest boom in wealth creation in the history of the world. When tech titans crowed that they would "move fast and break things," Kara Swisher was moving faster and breaking news. While covering the explosion of the digital sector in the early 1990s, she developed a long track record of digging up and reporting the facts about this new world order. Her consistent scoops drove one CEO to accuse her of "listening in the heating ducts" and prompted Facebook's Sheryl Sandberg to once observe: "It is a constant joke in the Valley when people write memos for them to say, 'I hope Kara never sees this.'" While still in college, Swisher got her start at The Washington Post, where she became one of the few people in journalism interested in covering the nascent internet. She went on to work for The Wall Street Journal, joining with Walt Mossberg to start the groundbreaking D: All Things Digital conference, as well as pioneering tech news sites. Swisher has interviewed everyone who matters in tech over three decades, right when they presided over an explosion of world-changing innovations that has both helped and hurt our world. Steve Jobs, Jeff Bezos, Elon Musk, Bill Gates, Sheryl Sandberg, Bob Iger, Larry Page and Sergey Brin, Meg Whitman, Peter Thiel, Sam Altman, and Mark Zuckerberg are just a few of whom Swisher made sweat—figuratively and, in Zuckerberg's case, literally. Despite the damage she chronicles, Swisher remains optimistic about tech's potential to help solve problems and not just create them. She calls upon the industry to make better, more thoughtful choices, even as a new set of powerful AI tools are poised to change the world yet again. At its heart, this book is a love story to, for, and about tech from someone who knows it better than anyone.

Theological Incorrectness Jason Slone, 2007-12-03 Why do religious people believe what they shouldn't -- not what others think they shouldn't believe, but things that don't accord with their own avowed religious beliefs? D. Jason Slone terms this phenomenon theological incorrectness. He argues that it exists because the mind is built in such a way that it's natural for us to think divergent thoughts simultaneously. Human minds are great at coming up with innovative ideas that help them make sense of the world, he says, but those ideas do not always jibe with official religious beliefs. From this fact we derive the important lesson that what we learn from our environment -- religious ideas, for example -- does not necessarily cause us to behave in ways consistent with that knowledge. Slone presents the latest discoveries from the cognitive science of religion and shows how they help us to understand exactly why it is that religious people do and think things that they shouldn't.

What Might Have Been Neal J. Roese, James M. Olson, 2014-01-14 Within a few short years, research on counterfactual thinking has mushroomed, establishing itself as one of the signature domains within social psychology. Counterfactuals are thoughts of what might have been, of possible past outcomes that could have taken place. Counterfactuals and their implications for perceptions of time and causality have long fascinated philosophers, but only recently have social psychologists made them the focus of empirical inquiry. Following the publication of Kahneman and Tversky's seminal 1982 paper, a burgeoning literature has implicated counterfactual thinking in such diverse judgments as causation, blame, prediction, and suspicion; in such emotional experiences as regret, elation, disappointment and sympathy; and also in achievement, coping, and intergroup bias. But how do such thoughts come about? What are the mechanisms underlying their operation? How do their consequences benefit, or harm, the individual? When is their generation spontaneous and when is it strategic? This volume explores these and other numerous issues by assembling contributions from the most active researchers in this rapidly expanding subfield of social psychology. Each chapter provides an in-depth exploration of a

particular conceptual facet of counterfactual thinking, reviewing previous work, describing ongoing, cutting-edge research, and offering novel theoretical analysis and synthesis. As the first edited volume to bring together the many threads of research and theory on counterfactual thinking, this book promises to be a source of insight and inspiration for years to come.

Improving the Performance of Sponsorship Ardi Kolah, 2015-06-12 Without a doubt, sponsorship is one of the most powerful promotional tools we have in the business of brand creation, brand recognition, and ultimately increasing sales. Moreover, brokering sponsors is a significant business in and of itself, something we often overlook. Considering sponsorship is a \$50 billion a year market--and growing--marketers and students of business ignore its potential at the risk of missing hugely lucrative opportunities. To fail to understand sponsorship is to fail to understand marketing. If you're looking for an introduction to this topic, most books available only address sports sponsorship: the largest section of the market perhaps, but by no means the only one. Kolah's *Improving the Performance of Sponsorship* is a guide that examines all types of sponsorship, clearly explaining and defining its mechanics, advising on how to select the right properties, how to sell sponsorship, ethical issues, measurement and key legal principles. This book is all keen marketers will need for a thorough understanding of how sponsorship works.

Through the Grapevine Taylor N. Carlson, 2024-07-06 An enlightening examination of what it means when Americans rely on family and friends to stay on top of politics. Accurate information is at the heart of democratic functioning. For decades, researchers interested in how information is disseminated have focused on mass media, but the reality is that many Americans today do not learn about politics from direct engagement with the news. Rather, about one-third of Americans learn chiefly from information shared by their peers in conversation or on social media. How does this socially transmitted information differ from that communicated by traditional media? What are the consequences for political attitudes and behavior? Drawing on evidence from experiments, surveys, and social media, Taylor N. Carlson finds that, as information flows first from the media then person to person, it becomes sparse, more biased, less accurate, and more mobilizing. The result is what Carlson calls distorted democracy. Although socially transmitted information does not necessarily render democracy dysfunctional, *Through the Grapevine* shows how it contributes to a public that is at once underinformed,

polarized, and engaged.

The Knowledge Lewis Dartnell, 2015-03-10 How would you go about rebuilding a technological society from scratch? If our technological society collapsed tomorrow what would be the one book you would want to press into the hands of the postapocalyptic survivors? What crucial knowledge would they need to survive in the immediate aftermath and to rebuild civilization as quickly as possible? Human knowledge is collective, distributed across the population. It has built on itself for centuries, becoming vast and increasingly specialized. Most of us are ignorant about the fundamental principles of the civilization that supports us, happily utilizing the latest—or even the most basic—technology without having the slightest idea of why it works or how it came to be. If you had to go back to absolute basics, like some sort of postcataclysmic Robinson Crusoe, would you know how to re-create an internal combustion engine, put together a microscope, get metals out of rock, or even how to produce food for yourself? Lewis Dartnell proposes that the key to preserving civilization in an apocalyptic scenario is to provide a quickstart guide, adapted to cataclysmic circumstances. *The Knowledge* describes many of the modern technologies we employ, but first it explains the fundamentals upon which they are built. Every piece of technology rests on an enormous support network of other technologies, all interlinked and mutually dependent. You can't hope to build a radio, for example, without understanding how to acquire the raw materials it requires, as well as generate the electricity needed to run it. But Dartnell doesn't just provide specific information for starting over; he also reveals the greatest invention of them all—the phenomenal knowledge-generating machine that is the scientific method itself. *The Knowledge* is a brilliantly original guide to the fundamentals of science and how it built our modern world.
