Collocations in a Learner Corpus Nadja Nesselhauf, 2005 Collocations are both pervasive in language and difficult for language learners, even at an advanced level. In this book, these difficulties are for the first time comprehensively investigated. On the basis of a learner corpus, idiosyncratic collocation use by learners is uncovered, the building material of learner collocations examined, and the factors that contribute to the difficulty of certain groups of collocations identified. An extensive discussion of the implications of the results for the foreign language classroom is also presented, and the contentious issue of the relation of corpus linguistic research and language teaching is thus extended to learner corpus analysis.

Vocabulary Increase and Collocation Learning Haiyan Men, 2017-09-04 This book highlights research that expands on our knowledge of second- language collocation acquisition. It presents original findings based on the largest collocation database to date, encompassing over 8,000 collocations: verb + noun, adjective + noun, and noun + noun. These collocations, collected from a one-million-learner corpus, were not confined to English as a foreign language (EFL) learners at a particular proficiency level, but also included learners at three levels. As such, the book provides a panoramic view regarding L2 collocation acquisition, not only in terms of learners' acquisition of different types of collocations, but in terms of the developmental patterns in L2 collocation learning. One major discovery is that there is a collocation lag as learners' proficiency levels rise, which is associated with vocabulary increase, in particular semantic domains—a remarkable insight for second-language acquisition researchers, English teachers and EFL learners alike. The findings reported shed new light on how collocations are acquired by EFL learners, offering guidance on how they can best be taught. In closing, the book discusses pedagogical aspects that arise from considering how learners can be helped with collocation learning.

Lexical Collocation Analysis Pascual Cantos-Gómez, Moisés Almela-Sánchez, 2018-08-21 This book re-examines the notion of word associations, more precisely collocations. It attempts to come to a potentially more generally applicable definition of collocation and how to best extract, identify and measure collocations. The book highlights the role played by (i) automatic linguistic annotation (part-of-speech tagging, syntactic parsing, etc.), (ii) using semantic criteria to facilitate the identification of collocations, (iii) multi-word structured, instead of the widespread assumption of bipartite collocational structures, for capturing the intricacies of the phenomenon of syntagmatic attraction, (iv) considering collocation and valency as near neighbours in the lexis-grammar continuum and (v) the mathematical properties of statistical association measures in

the automatic extraction of collocations from corpora. This book is an ideal guide to the use of statistics in collocation analysis and lexicography, as well as a practical text to the development of skills in the application of computational lexicography. *Lexical Collocation Analysis: Advances and Applications* begins with a proposal for integrating both collocational and valency phenomena within the overarching theoretical framework of construction grammar. Next the book makes the case for integrating advances in syntactic parsing and in collocational analysis. Chapter 3 offers an innovative look at complementing corpus data and dictionaries in the identification of specific types of collocations consisting of restricted predicate-argument combinations. This strategy complements corpus collocational data with network analysis techniques applied to dictionary entries. Chapter 4 explains the potential of collocational graphs and networks both as a visualization tool and as an analytical technique. Chapter 5 introduces MERGE (Multi-word Expressions from the Recursive Grouping of Elements), a data-driven approach to the identification and extraction of multi-word expressions from corpora. Finally the book concludes with an analysis and evaluation of factors influencing the performance of collocation extraction methods in parsed corpora.

Form, Meaning and Function in Collocation Haoda Feng,2020-04-03 The issue of differences between translational language and native-speaker language has become a topic of increasing interest in linguistics and Translation Studies (TS). One of the primary tasks in this research area is to employ a corpus approach and analyse collocations with authentic language data by comparing comparable corpora consisting of translated and native-speaker texts. Collocation in linguistics and TS refers to the relationship of co-occurrence between lexical items. The book shows that examining the use of collocations constitutes an integral part in assessing the naturalness of second language (L2) use, and therefore can be a valid measure to make a distinction between translational language and native-speaker language. Nevertheless, the role of collocation has not been given enough attention or discussed systematically in TS and, to date, there are hardly any translation theorists who have clarified the mechanism of collocation in TS, by which translators acquire receptive and

productive knowledge of collocations in their L2. In addition, previous research in this area is largely confined to Indo-European languages, resulting in a lack of empirical evidence involving Asian languages. This book therefore attempts to bridge the gap in the literature and constitute an integral part in the research area.

Bilingual Writers and Corpus Analysis David M. Palfreyman, Nizar Habash, 2022-12-23 This innovative volume is one of the first to represent the usage of bilingual writers in both their languages, offering insight into language corpora as extremely valuable tools in contemporary applied linguistics research, and in turn, into how much of the world's population operate daily. This book discusses one of the first examples of a bilingual writer corpus, the Zayed Arabic-English Bilingual Undergraduate Corpus (ZAEBUC), which includes writing by hundreds of students in two languages, with additional information about the writers and the texts. The result is a rich resource for research in multilingual use and learning of language. The book takes the reader through the design and use of such a corpus and illustrates the potential of this type of corpus with detailed studies that show how assessment, vocabulary, and discourse work across two very different languages. This volume will be of interest to scholars, policymakers, and educators in bilingualism, plurilingualism, language education, corpus design, and natural language processing.

A grammar of Japhug Guillaume Jacques, 2021 Japhug is a vulnerable Gyalrongic language, which belongs to the Trans-Himalayan (Sino-Tibetan) family. It is spoken by several thousand speakers in Mbarkham county, Rngaba district, Sichuan province, China. This grammar is the result of nearly 20 years of fieldwork on one variety of Japhug, based on a corpus of narratives and conversations, a large part of which is available from the Pangloss Collection. It covers the whole grammar of the language, and the text examples provide a unique insight into Gyalrong culture. It was written with a general linguistics audience in mind, and should prove useful not only to specialists of Trans-Himalayan historical linguistics and typologists, but also to anthropologists doing research in Gyalrong areas. It is also hoped that some readers will use it to learn Japhug and pursue research on this fascinating language in the future.

An Analysis of the Knowledge and Use of English Collocations by French and Japanese Learners Shino Kurosaki, 2013-11 The present study investigated differences on the knowledge and use of collocations between French and Japanese learners with regard to: 1) L1 influence; and 2) combinability and transparency influence. The test materials included four categories of the lexical collocations: 1) verb + noun; 2) delexicalised verb + noun; 3) adjective + noun; and 4) adverb + adjective. The two types of tasks, Multiple Choice Question Tasks and Translation Tasks, are performed, and the learner corpora are also investigated in order to examine whether the learners from different L1 backgrounds demonstrate different results. Though L1 influence by both French and Japanese learners was demonstrated, the Japanese learners showed a greater L1 influence in the [adjective] noun] category than the French learners. The investigation also found that L1 influence does not

necessarily result in accuracy of the collocations. With regard to the combinability and transparency influence, the results of the two types of tasks followed Kellerman's (1978) remark. However, some contrasted results were also identified in learner corpus investigation. Thus the combinability and transparency influence were not necessarily identified. The results of the present study have a potential to improve teaching/learning of collocations through recognizing the learners' tendencies of learning collocations.
