New Challenges and Perspectives in Conservation Breeding Programs Eliana Pintus, José Luis Ros-Santaella, William Holt, Pierre Comizzoli, 2025-05-21 Conservation Breeding Programs (CBPs) remain essential tools to preserve animal biodiversity and save threatened species from extinction. Despite the advances made during the last decades, CBPs have been carried out only on a small number of species, mostly mammals and birds. There is, therefore, an urgent need to develop and complement in-situ and ex-situ strategies to also preserve other vertebrates like fish, amphibians, and reptiles, in which the biodiversity loss because of climate change or other anthropogenic activities is even more dramatic. One of the main factors that limits CBPs' success is the lack of knowledge of the animal reproductive biology and behavior, which is precisely known, for instance, in less than 4% of mammals, the majority of which are terrestrial species. Such knowledge is beneficial not only to enhance but also to control animal fertility that is especially warranted for the management of overabundant or invasive species, which represent a further major threat for biodiversity. The goal of this Research Topic is to bring together studies that deal with different aspects of animal reproduction both in captive and wild populations. This includes both ex-situ and in-situ approaches such as the management of animal reproduction in captive populations and their reintroduction/release into the wild. Other approaches such as assisted reproductive technologies and biobanking greatly contribute to the success of conservation breeding. This Research Topic also welcomes studies exploring the effects of biotic (e.g., inbreeding, diseases, stress) and abiotic (e.g., anthropogenic activities, housing, and veterinary care) factors on reproductive biology of all vertebrates' classes, with a special interest to fish, amphibians, and reptiles. As a comprehensive knowledge of animal reproduction and behavior plays a key role for the development and success of breeding programs, descriptive studies on reproductive anatomy and physiology of wild or captive species, either endangered or overabundant, are welcomed. The Research Topic also accepts manuscripts that deal with ethical aspects of animal welfare in CBPs and population management of invasive or overabundant species.

Coral Reef Conservation and Restoration in the Omics Age Madeleine J. H. van Oppen, Manuel Aranda Lastra, 2022-09-12 The rapid demise of coral reefs worldwide has spurred efforts to develop innovative conservation and restoration methods. Many of these rely on omics approaches to produce genetic, genomic, transcriptomic, epigenomic or metabolomic data to inform conservation and restoration interventions. This book provides the state of play of this field. It discusses topics

ranging from how genomic and environmental DNA (eDNA) data can be used to inform marine protected area design and cryopreservation strategies, the use of knowledge on adaptive genetic and epigenetic variation to maximise environmental stress tolerance of coral stock, harnessing transcriptome data to develop early warning markers, the use of microbial symbiont omics data in guiding restoration strategies, to applications of metabolomics and genetic engineering. How best to translate omics data to resource managers is also discussed.

Contributions of Zoos and Aquariums to the Advancement of Marine Science Steven T. Kessel, Charles Knapp, Tracy A. Romano, Alistair Dove, Heather Jane Koldewey, 2025-02-13 As zoological organizations evolve in the twenty-first century to address the biodiversity extinction crisis, and proactively demonstrate relevance in a changing public opinion landscape, their conservation science portfolios continue to expand. Public zoos and aquariums address these issues directly by conducting both ex- and in-situ research designed to advance our understanding of species while also detecting, diagnosing, and halting population declines in the wild. In particular, the distinct nature of zoological organizations uniquely positions them to make significant contributions to marine science. The ability to care for and access a diverse suite of marine species provides the opportunity to understand their behavior, biology, physiology, which can inform ex-situ investigations. Moreover, the broad skillsets of staff facilitate extensive collaborative research opportunities. These ongoing contributions to marine science have remained relatively underappreciated by others outside the community. Here we intend to raise awareness about these contributions and initiate further collaborative research opportunities. Building on an increasing body of literature, our goal is to curate a diverse portfolio of research that represents the contributions of zoos and aquariums to the field of marine science, and to highlight the novel qualities of these conservation-based organizations. These can broadly be divided into four main categories: i) Infrastructure - extensive capacity to care for a wide variety of animals, extensive veterinarian hospital spaces and equipment, advanced water quality and microbiology labs, research vessels, and the generation of funds through ticket sales and contributions; ii) Animal care - expertise in maintaining animals under professional human care including breeding, diverse veterinary expertise, development of species-specific research techniques relevant to the study of wild populations; iii) Dedicated research programs/personnel - typically focused on wild populations/ecosystems; and iv) Education and social science - policy and advocacy; education and outreach, large audiences to educate/engage on conservation issues, and inspiring the next generation of conservation champions/biologists. This will serve to further bring zoos and aquariums to the forefront as potential collaborators for other marine scientists conducting both in-situ and ex-situ research, particularly those studies that would benefit from the unique opportunities and rare and endangered species zoos and aquariums provide.

Australia's Megafires Libby Rumpff, Sarah M. Legge, Stephen van Leeuwen, Brendan A. Wintle, John C.Z. Woinarski, 2023-02-01 The Australian wildfires of 2019–20 (Black Summer) were devastating and unprecedented. These

megafires burnt more than 10 million hectares, mostly of forests in southern and eastern Australia. Many of the fires were uncontrollable. These megafires affected many of Australia's most important conservation areas and severely impacted threatened species and ecological communities. They were a consequence of climate change – and offered a glimpse of how this is likely to continue to affect our future. Australia's Megafires includes contributions by more than 200 researchers and managers with direct involvement in the management and conservation of the biodiversity affected by the Black Summer wildfires. It provides a comprehensive review of the impacts of these fires on all components of biodiversity, and on Indigenous cultural values. These fires also triggered an extraordinary and highly collaborative response by governments, NGOs, Indigenous groups, scientists, landholders and others, seeking to recover the fire-affected species and environments – to restore Country. This book documents that response. It draws lessons that should be heeded to sustain that recovery and to be better prepared for the inevitable future comparable catastrophes. Such lessons are of global relevance, for wildfires increasingly threaten biodiversity and livelihoods across the globe.

Wildlife Research in Australia Bradley P. Smith, Jordan O. Hampton, Helen P. Waudby, Corinne Alberthsen, 2022-07 Wildlife Research in Australia: Practical and Applied Methods is a guide to conducting wildlife research in Australia. It provides advice on working through applications to animal ethics committees, presents general operating procedures for a range of wildlife research methods, and details animal welfare considerations for all Australian taxa. Compiled by over 200 researchers with extensive experience in field-based wildlife research, teaching and animal ethics administration, this comprehensive book supports best practice research methods and helps readers navigate the institutional animal care approval process. Wildlife Research in Australia will help foster a national approach to wildlife research methods, and is an invaluable tool for researchers, teachers, students, animal ethics committee members and organisations participating in wildlife research and other activities with wildlife.

Animal Andrology Peter J Chenoweth, Steven Lorton, 2014-04-30 Understanding animal andrology is fundamental to optimising genetic breeding traits in domestic and wild animals. This book provides extensive coverage of male reproductive biology, discussing the essentials of sperm production, harvest and preservation before covering the applications to a range of animals including cattle, horses, pigs, small ruminants, camelids, cats and dogs, poultry and exotic species. It also examines the laboratory procedures that provide the basis of general fertility research.

Current Therapy in Medicine of Australian Mammals Larry Vogelnest, Timothy Portas, 2019-05-01 Current Therapy in Medicine of Australian Mammals provides an update on Australian mammal medicine. Although much of the companion

volume, *Medicine of Australian Mammals*, is still relevant and current, there have been significant advances in Australian mammal medicine and surgery since its publication in 2008. The two texts together remain the most comprehensive source of information available in this field. This volume is divided into two sections. The first includes comprehensive chapters on general topics and topics relevant to multiple taxa. Several new topics are presented including: wildlife health in Australia and the important role veterinarians play in Australia's biosecurity systems; medical aspects of native mammal reintroductions and translocations; disease risk analysis; wildlife rehabilitation practices in Australia with an emphasis on welfare of animals undergoing rehabilitation; management of overabundant populations; immunology; and stress physiology. The second section provides updates on current knowledge relevant to specific taxa. Several appendices provide useful reference data and information on clinical reference ranges, recommended venipuncture sites, chemical restraint agent doses and regimens, a drug formulary and dental charts. Written by Australian experts, *Current Therapy in Medicine of Australian Mammals* is clinically oriented, with emphasis on practical content with easy-to-use reference material. It is a must-have for veterinarians, students, biologists, zoologists and wildlife carers and other wildlife professionals. This volume also complements, updates and utilises the resources of other books such as *Radiology of Australian Mammals* (Vogelnest and Allan 2015), *Pathology of Australian Native Wildlife* (Ladds 2009), *Haematology of Australian Mammals* (Clark 2004) and *Australian Mammals: Biology and Captive Management* (Jackson 2003), all CSIRO Publishing publications.

Conservation of Endangered Species in Captivity Edward F. Gibbons, Barbara Susan Durrant, Jack Demarest, 1995-01-01 This multi-disciplinary approach to conservation of endangered species in captivity is organized taxonomically and by scientific discipline. The seven taxonomic groups included are invertebrates; fish, reptiles and amphibians, birds, marine mammals, primates, and other mammals. Within each taxonomic group, four scientific disciplines are explored: conservation, reproductive physiology, behavior, and captive design. Conservation chapters summarize the status of the taxonomic group both in the wild and in captivity. Reviewed in the reproductive physiology chapters are anatomy, endocrinology and physiology for females and males of the taxonomic group. In the section on behavior the functions of captive animal research, the methods used, and the problems encountered are discussed. And, in examining captive design the authors provide a general historical outline of the philosophies, trends, and scientific issues for the targeted taxonomic group.

There is an urgent need for concerted action to conserve the marsupials and monotremes of the Australasian region. Australia has the worst extinction rate for the mammals of any continent or country and Papua New Guinea and eastern Indonesia are undergoing rapid development which, if not properly planned and controlled, could threaten the habitat of many marsupials, as well as other species.This Action Plan provides an overall perspective of the problems that confront conservation agencies and NGOs in the region and recommends actions required before the year 2000.
