**Great Books Written by Africans across the Academic Disciplines** Emmanuel D. Babatunde,Abdul Karim Bangura,2022-07-04 This volume is the first text to provide a comprehensive account of the great books across the academic disciplines written by Africans born in the continent and those who became naturalized citizens of African countries. These great books are those that have had a powerful, important or affecting influence on the author of a chapter in this book, as an individual, and on society. The books included here are mostly of the storytelling type and, thus, not representative of most of the academic disciplines. This volume allows each contributor to write a chapter on a discipline showcasing five great books written by African authors. Each selection is appraised and suggestions made by other experts in a discipline, while every chapter entails an introduction to the topic, a conceptual discussion of the discipline, a book-by-book review of the five books, and a conclusion and recommendations for research using the selected books.

Useful Research Susan Albers Mohrman,Ed Lawler,2011-04-04 For decades there has been an ongoing, at times heated, debate over how relevant to real-world concerns organizational research should be. The contributors to this book deviate from the orthodoxy of traditional positivistic research, arguing that the true test of whether knowledge is useful to practice is not whether it is rigorous but whether it is rigorous and results in improved organizational effectiveness. The contributors

were selected for their demonstrated ability to conduct useful research and their distinguished academic careers. Part I features researchers who describe the choices they make and the tactics they employ to ensure that their work advances both theory and practice. In part II, five highly respected researchers reflect on how they were able to have a broad impact on practice and still maintain academic rigor. Part III describes pathways to bring academic knowledge to practice—working with consultancies, executive PhD programs, OD specialists, and professional associations, as well as framing academic concepts in ways that are attention grabbing, memorable, and credible to practitioners. Part IV looks at the prospects for doing useful research in traditional academic settings like business schools and publishing it in peer-reviewed journals. Finally, Part V sums up the themes of the book and the challenges and opportunities facing researchers who aspire to do research that advances both theory and practice.

TEXT BOOK OF PHYSICAL PHARMACEUTICS-II Dr. Ritesh Kumar, Dr. Jashanjit Singh, Dr. Hiranmoy Parya, Laxmi, Dr. Manoj Kumar Katual, 2025-05-12 The Textbook of Physical Pharmaceutics-II is a comprehensive academic resource designed to provide pharmacy students with an in-depth understanding of the physical principles that govern drug formulation and delivery. It covers a wide range of topics fundamental to pharmaceutical sciences, starting with colloidal dispersions, including their classification, particle size, shape, and the various properties—optical, kinetic, and electrical—that influences their behavior. The book explores the impact of phenomena such as coacervation, peptization, and the protective action of colloids, which are critical in advanced drug delivery systems. Rheology, a key chapter, delves into the flow characteristics of pharmaceutical materials, comparing Newtonian and Non-Newtonian systems, and addressing complex behaviors such as pseudoplasticity, dilatancy, plastic flow, and thixotropy, with practical methods to measure viscosity. Deformation of solids is also discussed, focusing on stress, strain, and the Heckel equation, which are important in tablet compression. The coarse dispersion section explains the formulation, stability, and rheology of suspensions and emulsions, emphasizing the theories of emulsification and the HLB method. Micromeritics introduces students to particle size analysis, surface area determination, porosity, and flow properties—all essential in designing efficient dosage forms. Drug stability, a crucial area, is addressed through detailed explanations of reaction kinetics, including zero, first, and second-order reactions. It also highlights factors affecting drug degradation such as temperature, pH, and light, and includes strategies for stabilization and accelerated stability testing. The book integrates theoretical concepts with practical applications, offering simple numerical problems to reinforce learning. With its structured approach and detailed content, this textbook serves as a valuable guide for mastering the physical principles in pharmaceutical sciences and preparing students for both academic success and industry readiness.

**Navigating Fake News, Alternative Facts, and Misinformation in a Post-Truth World** Dalkir, Kimiz,Katz, Rebecca,2020-02-28 In the current day and age, objective facts have less influence on opinions and decisions than personal emotions and beliefs. Many individuals rely on their social networks to gather information thanks to social media’s ability to share information rapidly and over a much greater geographic range. However, this creates an overall false balance as people tend to seek out information that is compatible with their existing views and values. They deliberately seek out “facts” and data that specifically support their conclusions and classify any information that contradicts their beliefs as “false news.” *Navigating Fake News, Alternative Facts, and Misinformation in a Post-Truth World* is a collection of innovative research on human and automated methods to deter the spread of misinformation online, such as legal or policy changes, information literacy workshops, and algorithms that can detect fake news dissemination patterns in social media. While highlighting topics including source credibility, share culture, and media literacy, this book is ideally designed for social media managers, technology and software developers, IT specialists, educators, columnists, writers, editors, journalists, broadcasters, newscasters, researchers, policymakers, and students.
