Estadística para administración Jesús Rodríguez Franco,Alberto Isaac Pierdant Rodríguez,Elva Cristina Rodríguez Jiménez,2017-02-15 Estadística para administración, 2^a ed., está dirigido a personas interesadas en los temas de estadística y probabilidad básicos, ya que comprende desde el uso de la aritmética en estadística, hasta temas un poco más complejos como son las pruebas de hipótesis, series de tiempo y regresión simple. Sus principales usuarios son los estudiantes, profesores y profesionales en administración de empresas, contabilidad, economía, finanzas, mercadotecnia, para el personal que labora en la administración pública, y que en una forma directa requieran del uso de la estadística y la probabilidad para analizar de manera sencilla, pero objetiva los problemas que se les presenten sobre la toma de decisiones bajo incertidumbre. En esta segunda edición cada capítulo está estructurado de tal forma que contiene una breve introducción al contenido del mismo, después el desarrollo teórico y definiciones de los temas que forman, incluyendo ejemplos, gráficas o cuadros estadísticos de análisis según sea el caso, ejemplos solucionados con Excel y otros con el paquete estadístico IBM-SPSS, así como problemas a resolver, donde al final de cada capítulo se muestran sus respectivas respuestas.

Guía de pruebas y evaluaciones de la NSCA Todd Miller,2016-09-01 Los principios y técnicas del entrenamiento de fuerza y acondicionamiento se van haciendo cada vez más complejos, al igual que los planteamientos del diseño, la aplicación y la puesta a prueba de los correspondientes programas. Un programa de entrenamiento que no cuente con el adecuado sistema de seguimiento de los progresos con él conseguidos resulta incompleto de manera manifiesta. Con esta obra, el entrenador cuenta con una base sólida para el desarrollo y la puesta en práctica de sus propios programas de prueba y medición, que le permitirá optimizar el rendimiento de sus deportistas. El texto comienza exponiendo los fundamentos de las pruebas y el análisis de los datos y los métodos de interpretación de resultados y de deducción de las pertinentes conclusiones. Los capítulos que siguen incluyen pruebas de todo tipo, desde las más rudimentarias, como la determinación de la composición corporal o la presión arterial, hasta las más complejas, como el cálculo del valor de umbral de lactato o el establecimiento de la potencia aeróbica.

Estadística para periodistas, publicitarios y comunicadores Jordi Àngel Jauset, 2014-06-27 “Es que soy de letras”. Esta excusa para disculparse a la hora de abordar un tema que incluye estadísticas no se corresponde ni con la trascendencia que éstas tienen en la actualidad ni con una práctica profesional y responsable del trabajo de periodistas y profesionales de la comunicación. La estadística es la ciencia que ofrece un retrato de una determinada realidad a partir del análisis y la interpretación de datos numéricos. La información que resulta de su aplicación permite tomar decisiones con un reducido margen de error, por lo que su uso se ha generalizado y ha pasado a formar parte de nuestra vida cotidiana. Presupuestos, leyes, bases de datos, sondeos de opinión, encuestas y estudios son manejados hoy por toda clase de administraciones, organizaciones, entidades y medios de comunicación. Por este motivo, tener conocimientos de estadística se ha convertido en una necesidad para un buen número de profesionales, entre ellos los de la comunicación, quienes continuamente deben manejar e interpretar multitud de datos procedentes de fuentes estadísticas. Esta obra permite acercarse de manera sencilla al análisis de cifras estadísticas y aclarar aquellas cuestiones que generan mayor confusión en la práctica profesional, es decir, la interpretación de porcentajes, los índices de audiencia, los diseños muestrales, las fichas técnicas y los resultados de encuestas. Se trata, por tanto, de una obra con voluntad de manual de consulta que, con el ánimo de resolver dudas, combina la exposición teórica con múltiples ejercicios prácticos y ejemplos reales de los ámbitos del periodismo, la publicidad y la comunicación.
