Advancement in Equine Pain Management Ludovica Chiavaccini, Rachel Anne Reed ,Claudia Spadavecchia,2025-02-17

Despite recent improvements in the perception of equine pain and welfare, the recognition and treatment of pain in horses still lag behind their small animal counterpart. While most clinicians strongly advocate preventing and alleviating pain, it is still debated whether a little discomfort may reduce the risk that the animal will overuse an injured body part, especially in prey animals like horses. In addition, the reluctance to use systemic full mu-opioid receptor agonists still exists due to the concern that opioids may cause excitation, the fear that opioid receptor agonists may decrease gastrointestinal motility, and the conflicting data on the analgesic efficacy of full mu opioids in horses with naturally occurring diseases. Therefore, this special issue will revolve around recent advancements in equine pain understanding, recognition and management. Authors are encouraged to submit papers in the areas of recognizing, preventing, modulating, and managing acute and chronic pain in horses. We also encourage submissions focusing on pain mechanisms, such as mechanistic studies ex vivo or preliminary work involving tissues or biological samples from well-phenotyped horses. Finally, we note significant advancements in the development of therapeutic platforms, viral transfection modalities, or targeted neurotoxins that have been documented on other species and suggest relevance to the equine patient.

Veterinary Public Health: Veterinary Medicine's Current Challenges in a Globalised World Diana Meemken,Ivan

Nastasijevic,Reinhard Fries,Suporn Thongyuan,2025-03-21 The transfer of zoonotic agents leading to diseases and epidemics is well known, as well as the role played by human activity in the transmission of such agents. Veterinary Public Health (VPH) has an essential role keeping transmissible diseases under control and it involves different disciplines and the application of

different techniques. VPH has generally a local and regional focus in sample collection. Disease's detection may be limited to specific areas. Despite this aspect of VPH, the importance of exchanging data, discoveries and information cannot be overlooked due to the everchanging landscape in global trade, transboundary diseases and extended animal movements. On a local scale VPH needs often to face different challenges, starting with the infrastructures for live stocks down to optimization, using new technologies as Artificial Intelligence. There are instances where veterinary services are not readily available and temporary solutions need to be found as for example paraveterinary services. The latter should be guaranteed by adequate professional training along the different stages of, as an example, the food chain production. Given the transboundary nature of zoonotic agents and diseases in the last decades, the One-Health approach has emerged as a new and holistic approach to incorporate the different facets of Veterinary Science. To strengthen this approach, veterinary training should eventually dedicate more attention to public health and to preventive measures of zoonosis and epidemics. This renewed focus will also have the additional benefit of defining more clearly the discipline of VPH. Human Public Health, with the same philosophy, should include the animal ecosphere, emerging diseases and zoonoses, focusing on the 'Human-Animal Interface'.

Feline Soft Tissue and General Surgery Sorrel J Langley-Hobbs, Jackie Demetriou, Jane Ladlow, 2013-10-01 While the practice of feline general and oncologic surgery has developed greatly in recent years, the option of referral for some cat owners is not always a viable one. The increasing requirement for the general veterinarian to be competent in performing feline surgery has not, however, been supported by a dedicated text on the subject. Feline General and Oncological Surgery assembles an international team of editors and contributors to present the first comprehensive resource devoted solely to all aspects of soft-tissue surgeries in the cat. Techniques are covered in a practical and detailed 'how to' manner and range from the common to the more specialized, ensuring the widest possible appeal. The book divides into several sections, initially considering the general approach to the feline surgery patient and then proceeding to detailed coverage of surgery by anatomic location. Part 1 deals with the basics of feline anesthesia, analgesia, preoperative and postoperative care of the patient, surgical instrumentation and surgical principles for oncology cases. Part 2 covers surgical techniques of general and

oncological feline diseases and injuries, which are explained as step-by-step methods with many specially prepared schematic illustrations specific to the cat. Emphasis is on presenting both classical methods and new techniques. Feline Soft Tissue and General Surgery is the perfect sister-text to Feline Orthopedic Surgery and Musculoskeletal Disease, also published by Elsevier. Together they comprise a comprehensive and complete literature giving practical coverage of all possible surgical procedures in the cat. - Provides a comprehensive, detailed and up-to-date summary of all available information on all aspects of feline general and oncological surgery. - Gives detailed practical information on how to operate on cats with medical conditions, internal disease and neoplasia. - Gives access to website showing videoclips of key surgical procedures. - International author team offers worldwide expertise and appeal. - Lavish full-colour line drawings and photographs throughout.

Towards a New 3Rs Era in Experimental Research Christopher R. Cederroth, Marta L. Alves Da Silva, Annemarie

Lang, Armand Mensen, Peter Bollen, Benjamin Victor Ineichen, Doris Wilflingseder, Jenny Stina-Maria Sandström, Serban Morosan, 2024-04-29 With the persisting need of animal experimentation for fundamental and applied research, the relevance and importance of the 3Rs Principle cannot be ignored. The Integrative Physiology of Metabolic Downstates Alessandro Silvani, 2021-11-02

Jak-Stat Signaling : From Basics to Disease Thomas Decker, Mathias Müller, 2012-06-06 JAK tyrosine kinases and STAT transcription factors constitute a signaling pathway, which is activated by cytokines. By activating gene transcription it regulates essential biological responses to environmental cues. The Jak-Stat pathway is involved in the regulation of cell development, differentiation, proliferation and apoptosis. Improper function may contribute to hematopoietic malignancies and cancer. This book provides comprehensive insights into the latest basic and clinical developments in the field. The first part reviews recent findings and new technologies pertaining to basics of Jak-Stat function. The second part describes the evolution of Jak-Stat signaling and the role of the pathway in invertebrate organisms. The third part focuses on Jak-Stat signaling in hematopoietic cells under both physiological and pathophysiological conditions. Finally, chapters in the fourth section describe the relationship of Jak-Stat signaling to various states of disease, particularly infection, leukemias and solid

cancers. The book is intended for all scientists in molecular biology, biochemistry and cell biology dealing with biomedical issues.

In vitro and in vivo development of a topical drug for the treatment of equine skin cancer - based on naturally occurring and synthetically modified substances in plane bark Lisa Annabel Weber, 2021-05-25 Equine sarcoids (ES) and equine malignant melanoma (EMM) are among the tumors affecting horses diagnosed most frequently. Both cutaneous neoplasms can be a significant cause of economic losses, morbidity and mortality in the animals. The treatment of equine skin cancer can be challenging and established, evidence-based therapies resulting in sustained tumor regression are rare. The pentacyclic, lupane-type triterpenes betulinic acid (BA) and betulin can be isolated from many botanical sources, predominantly from the bark of white birch and plane trees. In addition to various biological properties, they have gained attention mainly due to their anticancer features. Within the framework of the current PhD project, the compounds BA, BA derivative NVX-207, and betulin derivative betulinyl-bis-sulfamate were assessed in various in vitro and in vivo studies for their potential as a topical therapy for ES and EMM. In conclusion, the results generated from cell culture experiments, skin permeation assays and studies in the target species are promising. Further advancement of the investigational medicinal products studied herein could lead to an effective topical and marketable, novel drug which helps to relieve suffering and, consequently, improve the welfare of equine skin cancer patients.

The Routledge International Handbook of Human-Animal Interactions and Anthrozoology Aubrey H. Fine, Megan K. Mueller, Zenithson Y. Ng, Alan M. Beck, Jose M. Peralta, 2023-09-26 This diverse, global, and interdisciplinary

volume explores the existing research, practice, and ethical issues pertinent to the field of human-animal interactions (HAIs), interventions, and anthrozoology, focusing on the perceived physical and mental health benefits to humans and the challenges derived from these relationships. The book begins by exploring the basic theoretical principles of anthrozoology and HAI, such as the evolution and history of the field, the importance of language, the economic costs and current perspectives to physical and mental wellbeing, the origins of domestication of animals, anthropomorphism, and how animals fit into human societies. Chapters then move onto practice, covering topics such as how animals help childhood and adulthood development, pet ownership, disability, the roles of pets for people with psychiatric disorders, the links between animal and domestic abuse, and then more widely into the therapeutic roles of animals, animal-assisted therapies, interactions outside the home, working animals, animals in popular culture, and animals in research, for leisure, and food. Including chapters on a wide range of animals, from domesticated pets to wildlife, this collection examines the benefits yet also reveals the complexity, and often dark side, of human-animal relations. Interweaving accessible commentaries with revealing chapters throughout the text, this collection would be of great interest to students and practitioners in the fields of mental health, psychology, veterinary medicine, zoology, biology, social work, history, and sociology.
