Henry William Carless Davis

Against Landlords Nick Bano,2025-04-15 The controversial case for why building more housing will not solve the housing problem Against Landlords overturns the stale assumptions and YIMBY delusions as to why housing in the UK is so poor, and why rent is so high. Bano lays the blame squarely at the feet of landlordism, which boosts house prices and makes tenancy unaffordable. Furthermore, building more housing is not the solution. It is firstly a problem of the law, and legal reforms must sweep away the rot at the heart of the housing crisis and British political life.

The Making of Modern Economics Mark Skousen,2022-01-04 The Making of Modern Economics presents a bold and engaging history of economics—the dramatic story of how the great economic thinkers built today's rigorous social science. This comprehensive yet accessible introduction to the major economic philosophers begins with Adam Smith and continues through to the present day. It examines the contributions each one made to our understanding of the role of the economist, the science of economics and economic theory. Boxes in each chapter highlight little-known and entertaining facts about the economists' personal lives that had an influence on their work. The fourth edition adds coverage of modern monetary theory, the COVID-19 pandemic, climate change, minimum wage debates, Schumpeter and socialism, Malthus and immigration, and more. The Making of Modern Economics is a valuable, engaging text for courses in the history of economic thought and political economy.

The Agrarian Question in Marx and His Successors Karl Marx, 2007 Modern economic writings do not possess a correct theory of rent arising specifically from ownership of landed property. This conceptual famine has seriously affected the analysis of agriculture in developing economies, where agriculture employs two-thirds of the work force, and where three-fifths of the land is owned by less than a tenth of the landowners. It also hampers us in understanding the agrarian crisis that is engulfing many countries of the Third World. The selection of readings put together in this volume is in three parts. The first part deals with Marx's writings on pre-capitalist relationships, and that aspect of the primitive accumulation of capital which relates to the formation of a propertyless labour force. The second part is devoted to the Marxist theory of rent, in particular to understanding the crucial distinction made by Marx between what he termed 'absolute ground rent', and Ricardo's concept, which he termed 'differential rent'. The third part relates to the process of capitalist development in agriculture and the formation of a class of capitalist producers. The editor's erudite and lucid Introduction lays out the terrain of the argument and makes Marx's theory of rent more accessible and comprehensible to the lay reader.

A Remedy for the Distresses of the Nation Thomas FARR, 1840

The Macroeconomics of Malthus John Pullen, 2021-07-08 The views of Thomas Robert Malthus (1766-1834) on population, first published in his *Essay on the Principle of Population*, 1798, continue to be hotly debated, either acclaimed or opposed, as do his views on macroeconomics. There is a widely held view that his macroeconomics lacks coherence and is merely a collection of isolated jottings. This book challenges this view; it presents textual evidence that Malthus's macroeconomics constitutes a significant system of thought with considerable academic merit. It reawakens debate about the relative merits of Malthus and Ricardo as macroeconomists and contends that Malthus offers important macroeconomic ideas and policy proposals relevant to modern economic problems. It presents and analyses Malthus' ideas on topics such as the

determinants of aggregate economic growth; the causes of general depression; the remedies for mass unemployment; the balance between laissez-faire and government intervention; the optimum division of expenditure between consumption, saving, and investment; the distribution of income between wages, profits, and rents; and the degree of economic inequality. Particular emphasis is given to his view that the pattern of distribution of wealth between the upper, lower, and middle classes is a major determinant or factor in the production of wealth, and that continued economic development depends on the growth of a large and affluent middle class. The radical nature of some of his ideas and policy proposals on the ownership and distribution of land is highlighted. An extensive treatment of Say's Law, incorporating aspects of the correspondence between Say and Malthus, addresses the question of whether Malthus showed that Say's Law is merely a truism and lacks any scientific relevance. The book also sheds new light on the nature of the influence of Malthus on Keynes. This combination of a search for textual authenticity and a critical assessment of the views of commentators on Malthus will be of significant interest to students and scholars of economic theory and the history of economics.

The Role of Agriculture in Economic Development Søren Kjeldsen-Kragh, 2007 Annotation This book addresses readers who are interested in economic history and the role of agriculture in economic development. The first part of the book describes agricultural progress in Europe and the USA since 1750, when modern societies began to develop. Although there were significant differences from country to country, agriculture was an engine of growth during the period 1750-1914. The second part of the book builds a model of the development process. The author emphasises that it is not possible to explain development without looking simultaneously at the resources, technology, institutions and attitudes prevalent in a country.-- Jacket.

Rethinking Real Estate Dror Poleg, 2019-10-31 Technology is revolutionizing the way real estate is designed, operated, and valued. It is democratizing access to capital and information, changing the way tenants use space, and eroding the power of regulation. Billions of dollars are funding these new real estate technologies and operating models. Value is shifting away from the assets themselves toward those who understand the needs of specific end-users and can use technology to deliver comprehensive, on-demand solutions. With all of these developments, there is an urgent need for a resource that helps industry practitioners think differently about their investment, customers, and competition. Rethinking Real Estate answers that call. It explores the impact of technology on all asset types — from retail projects, through lodging and residential properties, to office buildings and industrial facilities. Based on the author's two decades of experience working across four continents alongside the world's leading real estate investors, as well as hundreds of conversations with start-up founders and venture capitalists, this book provides practitioners with key insights, methodologies, and practical strategies to identify risks, take advantage of emerging opportunities, evaluate new competitors, and transform their organization, project, venture, or career. Whether you are an investor, developer, operator, broker, lender, facility manager, designer, planner, or

technology entrepreneur, this book will help you navigate the exciting period ahead.
