Maslach Burnout Inventory Christina Maslach, Susan E. Jackson, Michael P. Leiter, 2006

Maslach Burnout Inventory Christina Maslach, 2016 Recognized as the leading measure of burnout, the Maslach Burnout Inventory (MBI) is validated by the extensive research that has been conducted in the more than 25 years since its initial publication. The MBI Surveys address three general scales: --Emotional Exhaustion measures feelings of being emotionally overextended and exhausted by one's work. --Depersonalization measures an unfeeling and impersonal response toward recipients of one's service, care treatment, or instruction. --Personal Accomplishment measures feelings of competence and successful achievement in one's work.

MBI Maslach Burnout Inventory Christina Maslach, Susan E. Jackson, Michael P. Leiter, 1996 The most popular measure of burnout has been the Maslach Burnout Inventory (MBI) ever since it was introduced in 1981 (Maslach & Jackson, 1981; Schaufeli & Enzmann, 1998). Maslach and Jackson (1981, 1986) defined burnout as a three-dimensional syndrome of Emotional Exhaustion (feeling emotionally drained by one's contact with other people), Depersonalization (negative feelings and cynical attitudes toward the recipients of one's service or care), and reduced Personal Accomplishment (a tendency to evaluate negatively one's own work) that occurs among individuals who work with people in some capacity. Predictors of Burnout Among Ohio Licensed Psychologists Using the Maslach Burnout Inventory Cynthia A.

Wohlford-Lotas,2005 Demographic information and measures on the Maslach Burnout Inventory (MBI) were obtained for 151 Ohio licensed psychologists. Seven independent variables were examined in predicting burnout. Multiple regression analyses revealed that most psychologists within this sample scored within the low range for all subscales: Emotional Exhaustion (EE), 57%; Depersonalization (DP), 76%; Personal Accomplishment (PA), 77%. Number of hours per week providing supervision to others was predictive of burnout on all three subscales. Additionally, age, number of hours per week spent teaching, and employment setting, were predictive of Emotional Exhaustion subscale scores. Similarly, age and number of hours spent in obtaining supervision were predictive of scores on the Depersonalization (DP) subscale. Personal Accomplishment (PA) subscale scores were predicted by the variables, number of hours per week spent in direct service with clientele, and type of employment setting. Psychologists in private practice reported less burnout than those working in the public sector.

This timely Research Companion is essential reading to advance the understanding of healthy behaviors within working environments and to identify problems which can be the cause of illness. Containing both theoretical and empirical contributions written by distinguished academics working in Europe, North America and Australia, the book covers leading edge topics ranging from current theories of stress, stress management, and stress in specific occupational groups, such as doctors and teachers, to the relationship of stress with well-being. It provides systematic approaches towards practical actions and stress interventions in working environments and a solid theoretical framework for future research. It will be an essential companion to research on psychology and medicine as well as stress.

The Burnout Companion To Study And Practice Wilmar Schaufeli,D. Enzmann,2020-10-28 Burnout is a common metaphor for a state of extreme psychophysical exhaustion, usually work-related. This book provides an overview of the burnout syndrome from its earliest recorded occurrences to current empirical studies. It reviews perceptions that burnout is particularly prevalent among certain professional groups - police officers, social workers, teachers, financial traders - and introduces individual inter- personal, workload, occupational, organizational, social and cultural factors. Burnout deals with occurrence, measurement, assessment as well as intervention and treatment programmes. This textbook should prove useful to occupational and organizational health and safety researchers and practitioners around the world. It should also be a valuable resource for human resources professional and related management professionals.

Burnout Christina Maslach,2003 This book shows how to recognize, prevent and cure burnout syndrome for nurses, teachers, counselors, doctors, therapists, police, social workers, and anyone else who cares about and for people. Christina Maslach, the leading pioneer in research on burnout, offers help using illustrative examples and first-hand accounts. She points out what causes the feelings of emotional exhaustion, the callous indifference to people's problems, and the sense of inadequacy about one's ability to help and relate to others.

Organizational Stress Cary L. Cooper,Philip J. Dewe,Michael P. O'Driscoll,2001-02-06 This book examines stress in organizational contexts. The authors review the sources and outcomes of job-related stress, the methods used to assess levels and consequences of occupational stress, along with the strategies that might be used by individuals and organizations to confront stress and its associated problems. One chapter is devoted to examining an extreme form of occupational stress--burnout, which has been found to have severe consequences for individuals and their organizations. The book closes with a discussion of scenarios for jobs and work in the new millennium, and the potential sources of stress that these scenarios may generate.

Handbook of Occupational Health and Wellness Robert J. Gatchel,Izabela Z. Schultz,2012-12-21 This book integrates the growing clinical research evidence related to the emerging transdisciplinary field of occupational health and wellness. It includes a wide range of important topics, ranging from current conceptual approaches to health and wellness in the workplace, to common problems in the workplace such as presenteeism/abstenteeism, common illnesses, job-related burnout, to prevention and intervention methods. It consists of five major parts. Part I, "Introduction and Overviews," provides an

overview and critical evaluation of the emerging conceptual models that are currently driving the clinical research and practices in the field. This serves as the initial platform to help better understand the subsequent topics to be discussed. Part II, "Major Occupational Symptoms and Disorders," exposes the reader to the types of critical occupational health risks that have been well documented, as well as the financial and productivity losses associated with them. In Part III, "Evaluation of Occupational Causes and Risks to Workers' Health," a comprehensive evaluation of these risks and causes of such occupational health threats is provided. This leads to Part IV, "Prevention and Intervention Methods," which delineates methods to prevent or intervene with these potential occupational health issues. Part V, "Research, Evaluation, Diversity and Practice," concludes the book with the review of epidemiological, measurement, diversity, policy, and practice issues-with guidelines on changes that are needed to decrease the economic and health care impact of illnesses in the workplace, and recommendations for future. All chapters provide a balance among theoretical models, current best-practice guidelines, and evidence-based documentation of such models and guidelines. The contributors were carefully selected for their unique knowledge, as well as their ability to meaningfully present this information in a comprehensive manner. As such, this Handbook is of great interest and use to health care and rehabilitation professionals, management and human resource personnel, researchers and academicians alike.
