A Population-Based Policy and Systems Change Approach to Prevent and Control Hypertension Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Public Health Priorities to Reduce and Control Hypertension in the U.S. Population, 2010-08-13 Hypertension is one of the leading causes of death in the United States, affecting nearly one in three Americans. It is prevalent in adults and endemic in the older adult population. Hypertension is a major contributor to cardiovascular morbidity and disability. Although there is a simple test to diagnose hypertension and relatively inexpensive drugs to treat it, the disease is often undiagnosed and uncontrolled. A Population-Based Policy and Systems Change Approach to the Prevention and Control Hypertension identifies a small set of high-priority areas in which public health officials can focus their efforts to accelerate progress in hypertension reduction and control. It offers several recommendations that embody a population-based approach grounded in the principles of measurement, system change, and accountability. The recommendations are designed to shift current hypertension reduction strategies from an individual-based approach to a population-based approach. They are also designed to improve the quality of care provided to individuals with hypertension and to strengthen the Center for Disease Control and Prevention's leadership in seeking a reduction in the sodium intake in the American diet to meet dietary guidelines. The book is an important resource for federal public health officials and organizations, especially the Center for Disease Control and Prevention, as well as medical professionals and community health workers.

Effective Scientific Communication Cristina Hanganu-Bresch,Kelleen Flaherty,2020-07-22 Writing and the sciences are intricately linked. Without writing, science would not exist -- and could not be funded, communicated, replicated, enhanced, or applied. Further, writing helps scientists (and students) understand the science, explain the results of research

in a greater context, and develop new ideas. Working from this philosophy, this book primarily addresses undergraduate STEM majors and minors who want or need to improve their scientific writing skills. Grounded in the basics of rhetorical research and scientific writing practices and guided by the authors' experiences in the classroom, this book makes the case that writing is an essential component of science regardless of the stage of the scientific process, and that it is in fact a component of thinking about science itself. Featuring student-centered stories that place each topic in context and suggestions for practice, Hanganu-Bresch and Flaherty arm STEM students with the skills to enhance critical thinking and cultivate good writing habits.

Medicating Race Anne Pollock, 2012-10-02 In *Medicating Race*, Anne Pollock traces the intersecting discourses of race, pharmaceuticals, and heart disease in the United States over the past century, from the founding of cardiology through the FDA's approval of BiDil, the first drug sanctioned for use in a specific race. She examines wide-ranging aspects of the dynamic interplay of race and heart disease: articulations, among the founders of American cardiology, of heart disease as a modern, and therefore white, illness; constructions of normal populations in epidemiological research, including the influential Framingham Heart Study; debates about the distinctiveness of African American hypertension, which turn on disparate yet intersecting arguments about genetic legacies of slavery and the comparative efficacy of generic drugs; and physician advocacy for the urgent needs of black patients on professional, scientific, and social justice grounds. Ultimately, Pollock insists that those grappling with the meaning of racialized medical technologies must consider not only the troubled history of race and biomedicine but also its fraught yet vital present. Medical treatment should be seen as a site of, rather than an alternative to, political and social contestation. The aim of scholarly analysis should not be to settle matters of race and genetics, but to hold medicine more broadly accountable to truth and justice.

Medical Education in Pulmonary, Critical Care, and Sleep Medicine Patricia A. Kritek, Jeremy B. Richards, 2019-05-14 This is a book for clinician educators. It offers modern, evidence-based practices to use in teaching learners at a range of levels, with an emphasis on concrete strategies that teachers can implement in their own clinical practices as well as in small and large group settings. Medical education is rapidly changing with emerging evidence on best practices and a proliferation of new technologies. As strategies for effectively teaching medical learners evolve, it is important to understand the implications for Pulmonary, Critical Care, and Sleep Medicine (PCCM). This text is structured to allow easy access to the reader. Chapters are organized around level of learner (e.g., medical student to PCCM fellow to

practicing physicians) as well as the location of teaching. Given the variety of clinical settings in which PCCM physicians teach, specific consideration of best practices, broad changes in curricular design and pedagogy are considered in different clinical contexts. Each chapter begins with a focus on why the topic is important for clinician educators. A review of the available evidence and relevant medical education theory about the topic follows, with examples from specific studies that provide insight into best practices regarding the concepts and topics discussed in the chapter. For chapters focusing on learners, different environments are considered and similarly, if the focus is on the learning environment, attention is paid to the approach to different learners. Each chapter ends with a summary of the primary points from the chapter and concrete examples of how clinician teachers can put the concepts discussed in the chapter into practice. This is an ideal guide for educators in pulmonary, critical care, and sleep medicine.
