**The House of Wisdom** Jim Al-Khalili, 2011-03-31 A myth-shattering view of the Islamic world's myriad scientific innovations and the role they played in sparking the European Renaissance. Many of the innovations that we think of as hallmarks of Western science had their roots in the Arab world of the middle ages, a period when much of Western Christendom lay in intellectual darkness. Jim al- Khalili, a leading British-Iraqi physicist, resurrects this lost chapter of history, and given current East-West tensions, his book could not be timelier. With transporting detail, al-Khalili places readers in the hothouses of the Arabic Enlightenment, shows how they led to Europe's cultural awakening, and poses the question: Why did the Islamic world enter its own dark age after such a dazzling flowering?

**The Abbasid House of Wisdom** Ekmeleddin Ihsanoğlu, 2022-08-01 This volume examines the library of the Abbasid caliphs, known as The House of Wisdom (Bayt al-Hikma), exploring how this important institution has been misconceived by scholars'. This book places the palace library within the framework of the multifaceted cultural and scientific activities in the era of the caliphs, Harun al-Rashid and al-Ma'mun, generally regarded as the Golden Age of Islamic civilization. The author studies the first references to the House of Wisdom in European sources and shows how misconceptions arose because of incorrect translations of Arabic manuscripts and also because of how scholars overlooked the historical context of the library in ways that reflected their own cultural and national ambitions. The Abbasid House of Wisdom is perfect for scholars, students, and the wider public interested in the scientific and cultural activities of the Islamic Golden Age.

**The Secret Lives of Numbers** Kate Kitagawa, Timothy Revell, 2024-07-09 Shortlisted for the 2024 British Academy Book Prize A new history of mathematics focusing on the marginalized voices who propelled the discipline, spanning six continents and thousands of years of untold stories. A book to make you love math. —Financial Times Mathematics shapes almost everything we do. But despite its reputation as the study of fundamental truths, the stories we have been told about it are wrong—warped like the sixteenth-century map that enlarged Europe at the expense of Africa, Asia and the Americas. In *The Secret Lives of Numbers*, renowned math historian Kate Kitagawa and journalist Timothy Revell make the case that the history of math is infinitely deeper, broader, and richer than the narrative we think we know. Our story takes us from Hypatia, the first great female mathematician, whose ideas revolutionized geometry and who was killed for them—to Karen Uhlenbeck, the first woman to win the Abel Prize, “math’s Nobel.” Along the way we travel the globe to meet the brilliant

Arabic scholars of the “House of Wisdom,” a math temple whose destruction in the Siege of Baghdad in the thirteenth century was a loss arguably on par with that of the Library of Alexandria; Madhava of Sangamagrama, the fourteenth-century Indian genius who uncovered the central tenets of calculus 300 years before Isaac Newton was born; and the Black mathematicians of the Civil Rights era, who played a significant role in dismantling early data-based methods of racial discrimination. Covering thousands of years, six continents, and just about every mathematical discipline, *The Secret Lives of Numbers* is an immensely compelling narrative history.

**The One Year Book of Amazing Stories** Robert Petterson, 2018-10-09 ECPA 2020 Christian Book Award Finalist! You wouldn’t believe it, but . . . James Earl Jones, the voice of Darth Vader, grew up mute. Michael Jordan was cut from his high school basketball team. Albert Einstein was bullied mercilessly in school. Beethoven’s mom almost aborted him. Life takes the strangest sharp turns—and sometimes, U-turns. Robert Petterson—popular speaker, storyteller, and author—has been a student for his entire life of what God is teaching us through those real-life U-turns. In this book, he compiles 365 amazing stories that teach lessons you won’t easily forget. Each entry is written in the rest-of-the-story style popularized by Paul Harvey. With *The One Year Book of Amazing Stories*, you’ll marvel at how God has used the lives of these ordinary people to change the course of human history.

*Making Sense* Bill Cope, Mary Kalantzis, 2020-01-30 Explains the multimodal connections of text, image, space, body, sound and speech, in both old and new computer-mediated communication systems.

*The Evangelical Counter-Enlightenment* William R. Everdell, 2021-05-21 This contribution to the global history of ideas uses biographical profiles of 18th-century contemporaries to find what Salafist and Sufi Islam, Evangelical Protestant and Jansenist Catholic Christianity, and Hasidic Judaism have in common. Such figures include Muḥammad Ibn abd al-Waḥḥab, Count Nikolaus Zinzendorf, Jonathan Edwards, John Wesley, Jean-Jacques Rousseau, and Israel Ba’al Shem Tov. The book is a unique and comprehensive study of the conflicted relationship between the “evangelical” movements in all three Abrahamic religions and the ideas of the Enlightenment and Counter-Enlightenment. Centered on the 18th century, the book reaches back to the third century for precedents and context, and forward to the 21st for the legacy of these movements. This text appeals to students and researchers in many fields, including Philosophy and Religion, their histories, and World History, while also appealing to the interested lay reader.

**Avicenna** Bridget Lim, Aisha Khan, 2016-07-15 Known as the “prince of physicians,” Avicenna made enormous contributions to the fields of medicine, natural history, metaphysics, and religion. His use of Aristotelian logic and his work on the concept of “being” opened the door for a rationalist study of religion, influencing the later Christian philosophers Aquinas, Descartes, and Kant. Avicenna’s monumental Canon of Medicine is regarded as possibly the greatest medical work ever. Available in a Latin translation in Europe one hundred years after his death, it continued to be used there for the next

six centuries.

*Albucasis* Bridget Lim, Fred Ramen, 2016-07-15 Albucasis was born near Córdoba in al-Andalus, the center of a flourishing culture of science and philosophy. There, the two disciplines often complimented one another as traditional Islamic theology and law were embraced alongside the secular sciences. Among the many Islamic physicians and scientists who advanced medical science in their lifetimes, Albucasis would codify the art of surgery in an encyclopedic work, *al-Tasrif*, that it is still read today. His story is intimately connected to the history of Islam and how Muslims preserved the knowledge of the old Roman world, information that Europe would not rediscover for another four hundred years.

Science and Technology in World History James E. McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published. Tracing the relationship between science and technology from the dawn of civilization to the early twenty-first century, James E. McClellan III and Harold Dorn's bestselling book argues that technology as "applied science" emerged relatively recently, as industry and governments began funding scientific research that would lead directly to new or improved technologies. McClellan and Dorn identify two great scientific traditions: the useful sciences, which societies patronized from time immemorial, and the exploration of questions about nature itself, which the ancient Greeks originated. The authors examine scientific traditions that took root in China, India, and Central and South America, as well as in a series of Near Eastern empires in late antiquity and the Middle Ages. From this comparative perspective, McClellan and Dorn survey the rise of the West, the Scientific Revolution of the seventeenth century, the Industrial Revolution, and the modern marriage of science and technology. They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization. This new edition of *Science and Technology in World History* offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid. The Internet and social media receive increased attention. Facts and figures have been thoroughly updated and the work includes a comprehensive Guide to Resources, incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers.

The Map of Knowledge Violet Moller, 2020-04-14 After the fall of Rome, as civilizations collapsed and libraries burned, ancient knowledge that would eventually fuel the Renaissance was at risk of being lost. This thrilling history tracks three crucial books as they were passed hand to hand through seven cities during a perilous thousand-year journey of survival. After the great library at Alexandria was destroyed, Baghdad, Cordoba, Toledo, Salerno, and Palermo were rare outposts of knowledge in a dark world, where dedicated scholars collected, translated, and shared texts. Violet Moller's *The Map of Knowledge* takes us into the sparkling intellectual life that flourished there, highlighting the crucial role played by Arab scholars in improving the cornerstone ideas of Western thought. She shows us how foundational works on math, astronomy,

and medicine by Euclid, Ptolemy, and Galen eventually reached Venice, the major center of scientific printing, where their legacy was assured—having been rescued by the passionate curiosity of generations of readers.

**Shifting Currents** Karen Eva Carr, 2022-07-18 A deep dive into the history of aquatics that exposes centuries-old tensions of race, gender, and power at the root of many contemporary swimming controversies. *Shifting Currents* is an original and comprehensive history of swimming. It examines the tension that arose when non-swimming northerners met African and Southeast Asian swimmers. Using archaeological, textual, and art-historical sources, Karen Eva Carr shows how the water simultaneously attracted and repelled these northerners—swimming seemed uncanny, related to witchcraft and sin. Europeans used Africans’ and Native Americans’ swimming skills to justify enslaving them, but northerners also wanted to claim water’s power for themselves. They imagined that swimming would bring them health and demonstrate their scientific modernity. As Carr reveals, this unresolved tension still sexualizes women’s swimming and marginalizes Black and Indigenous swimmers today. Thus, the history of swimming offers a new lens through which to gain a clearer view of race, gender, and power on a centuries-long scale.

*Housing Capital* Simone Derix, Margareth Lanzinger, 2017-10-23 Throughout history, houses have been an economic resource as much as a means of social, political and cultural agency. From the early modern period to the 20th century, the multifaceted capital of houses linked individuals, families and societies in specific ways. The essays collected here probe the material texture of past societies concerning the inheritance, value, sale or maintenance of houses as well as the symbolic meanings that houses conveyed.

**God in Islamic Theology** Mehmet Ozalp, 2023-05-15 Theology is a rational endeavor to understand everything about God, from within a faith tradition and its scriptures, and in response to problems posed by the conditions of a particular time and place. *God in Islamic Theology: Tawhid in Classical Islamic Theology and Said Nursi’s Risale-i Nur* engages and gleans classical and contemporary understandings on the central tenets of God in Islam. The book makes a substantive contribution to Islamic Studies in four main ways. First, it grasps and justifies the use of the language and genre of theology in relation to scholarly efforts to relate Qur’anic teachings about God to human understanding. The development of Islamic theology and its evolving scope are explored to produce a fresh framework in the study of Islamic theology. Second, it directly addresses some of the challenges facing Islam, including its multi-layered theological positions and how these influence its internal coherence and its external relations, especially with Abrahamic faith traditions and Western philosophy generally. Third, presenting a new understanding of Islamic epistemology, it drives to the prime essential of Islamic theology in its attempting to prove the existence, oneness, and relatability of God. Fourth, it highlights and justifies the place of Said Nursi as an informed and theologically rigorous contemporary source in Islamic theology.

**The Crash of A Civilization** Kanchan Banerjee, 2022-07-13 The Current condition of each citizen, the society, and the

nation are the result of a deeply complex history. But what we know from history books, especially academic textbooks, are constructs based on the narratives of political powers, colonists, and outdated socioeconomic analysts. The time has come to know and understand our true history from fresh and updated perspectives. The subject of this book is how foreign ideologies and forces Christian, Islamic, and later colonists, western and Marxists' profound and long-term influence have impacted India, her society, and people. With a computer science back-ground, Kanchan Banerjee makes this remarkable and significant contribution, attempting to depict the current era with unique and lively storytelling using carefully studied evidence, logical deduction, and analysis. He has given detailed and comprehensive descriptions and assessments from pre-Islamic Arabia's history, foreign attacks and invasions of the Huns, the Turks to the Islamic rule and occupation in Delhi, and the British colonial and imperial atrocities. How did the crash and fall of a great ancient civilization happen? How has it been wounded the body and soul of a nation to break into several pieces? And what is the way to change the direction to the path of recovery and revival? This book is an effort to find the answers to these questions from our true history. If we know our past, we can change our future as well.

**A History of Science in World Cultures** Scott L. Montgomery, Alok Kumar, 2015-06-12 To understand modern science, it is essential to recognize that many of the most fundamental scientific principles are drawn from the knowledge of ancient civilizations. Taking a global yet comprehensive approach to this complex topic, *A History of Science in World Cultures* uses a broad range of case studies and examples to demonstrate that the scientific thought and method of the present day is deeply rooted in a pluricultural past. Covering ancient Egypt, Mesopotamia, India, Greece, China, Islam, and the New World, this volume discusses the scope of scientific and technological achievements in each civilization and how the knowledge it developed came to impact the European Renaissance. Themes covered include the influence these scientific cultures had upon one another, the power of writing and its technologies, visions of mathematical order in the universe and how it can be represented, and what elements of the distant scientific past we continue to depend upon today. Topics often left unexamined in histories of science are treated in fascinating detail, such as the chemistry of mummification and the Great Library in Alexandria in Egypt, jewellery and urban planning of the Indus Valley, hydraulic engineering and the compass in China, the sustainable agriculture and dental surgery of the Mayas, and algebra and optics in Islam. This book shows that scientific thought has never been confined to any one era, culture, or geographic region. Clearly presented and highly illustrated, *A History of Science in World Cultures* is the perfect text for all students and others interested in the development of science throughout history.

The Fear of Islam Todd H. Green, 2015 American and European societies, particularly in the long wake of the events of 9/11 and the bombings in Madrid and London, have struggled with the recurrent problem of Islamophobia, which continues to surface in waves of controversial legislative proposals, public anger over the construction of religious edifices, and

outbreaks of violence. The ongoing conflict between Israel and Palestine contributes fuel to the aggressive debate in Western societies and creates the need for measured discussion about religion, fear, prejudice, otherness, and residual colonialist attitudes. This book offers an introduction to the historical roots and contemporary forms of religious anxiety regarding Islam within the Western world.

Few Call It War Robert Michael Hicks, 2016-07-26 “A highly readable and well-documented account of the use and abuse of religion for violent political ends . . . This is a book well worth reading” (Timothy J. Demy, ThD, PhD, coauthor of *In the Name of God*). Most Americans could not fathom how Islamic terrorists could bring down the World Trade Center or an army psychiatrist could turn on his own soldiers, taking their lives in the name of his religion. How could an ex-army veteran blow up a federal building, or a Jewish doctor gun down Muslims at worship? None of these incidents fit our conceptions of the benevolence of religion. More importantly, is there something inherent within religions that justifies the taking of human lives? In *Few Call It War*, Dr. Robert Hicks explores these questions and takes the blinders off illuminating the roots of religious violence, what religious terrorists have in common, and how they differ. As Hicks points out, all major religions have used violence and terrorist methodologies at some points in their histories. *Few Call It War* reveals how the teachings of religious founders and the sacred writings attributed to them provide rich soil from which contemporary religious clerics and ideologues gain converts. If one is interested in gaining an answer to the question, “Of all the religions in the world, which are most prone to using violence?” *Few Call It War* provides a well-reasoned answer that is well worth the read. “A masterpiece in the study of religiously motivated terrorism. He has been fair in his critique of all religions, including movements within Judaism and even Christianity.” —Robert L. Brennemann, PhD, professor, Intercultural Studies, North Central University

**God and the Folly of Faith** Victor J. Stenger, 2012-04-03 A thorough and hard-hitting critique that is a must read for anyone interested in the interaction between religion and science. It has become the prevalent view among sociologists, historians, and some theistic scientists that religion and science have never been in serious conflict. Some even claim that Christianity was responsible for the development of science. In a sweeping historical survey that begins with ancient Greek science and proceeds through the Renaissance and Enlightenment to contemporary advances in physics and cosmology, Stenger makes a convincing case that not only is this conclusion false, but Christianity actually held back the progress of science for one thousand years. It is significant, he notes, that the scientific revolution of the seventeenth century occurred only after the revolts against established ecclesiastic authorities in the Renaissance and Reformation opened up new avenues of thought. The author goes on to detail how religion and science are fundamentally incompatible in several areas: the origin of the universe and its physical parameters, the origin of complexity, holism versus reductionism, the nature of mind and consciousness, and the source of morality. In the end, Stenger is most troubled by the negative influence that organized

religion often exerts on politics and society. He points out antiscientific attitudes embedded in popular religion that are being used to suppress scientific results on issues of global importance, such as overpopulation and environmental degradation. When religion fosters disrespect for science, it threatens the generations of humanity that will follow ours.

Global Rhetorics of Science Lynda C. Olman, 2023-09-01 With this volume, the field of rhetoric of science joins its sister disciplines in history and philosophy in challenging the dominance of Euro-American science as a global epistemology. The discipline of rhetoric understands world-making and community-building as interdependent activities: that is, if we practice science differently, we do politics differently, and vice versa. This wider aperture seems crucial at a time when we are confronted with the limitations of Euro-American science and politics in managing global risks such as pandemics and climate change—particularly in our most vulnerable communities. The contributors to this volume draw on their familiarity with a wide range of global scientific traditions—from Australian Aboriginal ecology to West African medicine to Polynesian navigation science—to suggest possibilities for reconfiguring the relationship between science and politics to better manage global risks. These possibilities should not only inspire scholars in rhetoric and technical communication but should also introduce readers from science and technology studies to some useful new approaches to the problem of decolonizing scenes of scientific practice around the world.
