Ancient Southwestern Mortuary Practices James T. Watson, Gordon F. M. Rakita,2020-08-03 Ancient Southwestern Mortuary Practices chronicles the modal patterns, diversity, and change of ancient mortuary practices from across the US Southwest and northwest Mexico over four thousand years of Prehispanic occupation. The volume summarizes new methodological approaches and theoretical issues concerning the meaning and importance of burial practices to different peoples at different times throughout the ancient Greater Southwest. Chapters focus on normative mortuary patterns, the range of variability of mortuary patterns, how the contexts of burials reflect temporal shifts in ideology, and the ways in which mortuary rituals, behaviors, and funerary treatments fulfill specific societal needs and reflect societal beliefs. Contributors analyze extensive datasets—archived and accessible on the Digital Archaeological Record (tDAR)—from various subregions, structurally standardized and integrated with respect to biological and cultural data. Ancient Southwestern Mortuary Practices, together with the full datasets preserved in tDAR, is a rich resource for comparative research on mortuary ritual for indigenous descendant groups, cultural resource managers, and archaeologists and bioarchaeologists in the Greater Southwest and other regions. Contributors: Nancy J. Akins, Jessica I. Cerezo-Román, Mona C. Charles, Patricia A. Gilman, Lynne Goldstein, Alison K. Livesay, Dawn Mulhern, Ann Stodder, M. Scott Thompson, Sharon Wester, Catrina Banks Whitley

Measuring and Valuing Health Benefits for Economic Evaluation John Brazier, Julie Ratcliffe, Joshua Salomon, Aki Tsuchiya, 2016-11-24 There are not enough resources in health care systems around the world to fund all technically feasible and potentially beneficial health care interventions. Difficult choices have to be made, and economic evaluation offers a systematic and transparent process for informing such choices. A key component of economic evaluation is how to value the benefits of health care in a way that permits comparison between health care interventions, such as through costs per quality-adjusted life years (QALY). *Measuring and Valuing Health Benefits for Economic Evaluation* examines the measurement and valuation of health benefits, reviews the explosion of theoretical and empirical work in the field, and explores an area of research that continues to be a major source of debate. It addresses the key questions in the field including: the definition of health, the techniques of valuation, who should provide the values, techniques for modelling health state values, the appropriateness of tools in children and vulnerable groups, cross cultural issues, and the problem of choosing the right instrument. This new edition contains updated empirical examples and practical applications, which help to clarify the readers understanding of real world contexts. It features a glossary containing the common terms used by practitioners, and has been updated to cover new measures of health and wellbeing, such as ICECAP, ASCOT and AQOL. It takes into account new research into the social weighting of a QALY, the rising use of ordinal valuation techniques, use of the internet to collect data, and the use of health state utility values in cost effectiveness models. This is an ideal resource for anyone wishing to gain a specialised understanding of health benefit measurement in economic evaluation, especially those working in the fields of health economics, public sector economics, pharmacoeconomics, health services research, public health, and quality of life research.
