The Usborne Book of the Future Kenneth William Gatland, David Jefferis, 1979

Future Tom Cheesewright, 2024-11-05 This inspiring book brings the wonder of the future to life, revealing how we might live in the coming decades. New forms of transportation and homes, new forms of energy generation, medical marvels and all sorts of other ideas are unpicked and explained.

Future Cities Nick Dunn, Paul Cureton, 2020-12-10 What might our cities look like in ten, twenty or fifty years? How may future cities face global challenges? Imagining the city of the future has long been an inspiration for many architects, artists and designers. This book examines how cities of the future have been visualised, what these projects sought to communicate and what the implications may be for us now. It provides a visual history of the future and explores the relationships between different visualisation techniques and ideologies for cities. Thinking about what futures are, who they are for, why they are desirable, and how and when they are to be brought into being is central to this book. Through visualisation we are able to experiment in ways that would be impractical and potentially hazardous in the real world, and this book, therefore, aims to contribute toward a better understanding of the power and agency of visualisations for future cities. In this lavishly illustrated text, the authors apply several critical lenses to consider the subject in different ways: technological futures, social futures, and global futures, providing a comprehensive survey and analysis of visions for future cities, and engaging creatively with how we perceive tomorrow's world and future studies more widely.

The Usborne Book of the Future Kenneth Gatland, David Jefferis, 1979

Seeking a Better Future Lucille H. Campey, 2012-08-11 Most emigration from England was voluntary, self-financed, and pursued by people who, while expecting to improve their economic prospects, were also critical of the areas in which they first settled. The exodus from England that gathered pace during the 19th century accounted for the greatest part of the total emigration from Britain to Canada. And yet, while copious emigration studies have been undertaken on the Scots and the Irish, very little has been written about the English in Canada. Drawing on wide-ranging data collected from English record offices and Canadian archives, Lucille Campey considers why people left England and traces their destinations in Ontario and Quebec. A mass of detailed information relating to pioneer settlements and ship crossings has been distilled to provide new insights on how, why, and when Ontario and Quebec acquired their English settlers. Challenging the widely held assumption

that emigration was primarily a flight from poverty, Campey reveals how the ambitious and resourceful English were strongly attracted by the greater freedoms and better livelihoods that could be achieved by relocating to Canada's central provinces.

Come With Me If You Want to Live Michael Harris, 2023-11-02 If our near future sometimes feels like a dystopian sci-fi movie, that's because it is. In *Come With Me If You Want to Live: The Future as Foretold in Classic Sci-Fi Films*, Michael Harris reveals the hidden-in-plain-sight meanings of the greatest science fiction films of the past fifty years, the ways in which they predicted the future that we are increasingly living in, but how we can still avoid the worst of what they warned us about. The 1970s saw the start of a new wave of science fiction that predicted environmental destruction, out-of-control technology, and escalating political crises. These were not the fantastical imaginings of filmmakers, they were based on rising environmental consciousness and solid scientific research. The explanation of why we didn't heed these warnings might be the most important story of our time - and now our future. Each chapter focuses on a classic sci-fi film: among them *Blade Runner*, *Terminator 2*, *12 Monkeys*, *Brazil*, *Soylent Green*, and the *Back to the Future* series; these films are used to consider our likely environmental, technological, and political future. But taking sci-fi seriously again could help us to regain our power to create different tomorrows guided by practical utopianism, and to imagine new science fictions for a better world. If you're wondering what the future holds, maybe you've already seen it.

Light and Photomedia Jai McKenzie, 2020-09-02 *Light and Photomedia* proposes that, regardless of technological change, the history and future of photomedia is essentially connected to light. It is a fundamental property of photomedia, binding with space and time to form and inform new, explicitly light-based structures and experiences. Jai McKenzie identifies light-space-time structures throughout the history of photomedia, from the early image machines through analogue and digital image machines to the present day. She proposes that they will continue to develop in the future and takes us to future image machines of the year 2039. With the use of the theories of Paul Virilio, Jean Baudrillard and Vilem Flusser, featuring artists including Henri Cartier-Bresson, Nam June Paik, Yves Klein, Eadweard Muybridge, Martha Rosler, Cindy Sherman and Michael Snow, as well as their photographic images, *Light and Photomedia* places the reader in a new history and future which, although mostly overlooked by the canon of photomedia theory, is an essential line of enquiry for contemporary thinking and dialogue in photography.

Future Cities Kenneth Gatland, David Jefferis, 1979 This heavily illustrated book shows what homes and living might be in the 21st century.

Space Forces Fred Scharmen, 2021-11-09 The radical history of space exploration from the Russian Cosmists to Elon Musk Many societies have imagined going to live in space. What they want to do once they get up there - whether conquering the unknown, establishing space colonies, privatising the moon's resources - reveals more than expected. In this fascinating radical history of space exploration, Fred Scharmen shows that often science and fiction have combined in the imagined

dreams of life in outer space, but these visions have real implications for life back on earth. For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth. For others, such as Wernher Von Braun, it was an engineering task that combined, in the Space Race, the Cold War, and during World War II, with destructive geopolitics. Arthur C. Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction. Meanwhile NASA planned and managed the space station like an earthbound corporation. Today, the market has arrived into outer space and exploration is the plaything of superrich technology billionaires, who plan to privatise the mineral wealth for themselves. Are other worlds really possible? Bringing these figures and ideas together reveals a completely different story of our relationship with outer space, as well as the dangers of our current direction of extractive capitalism and colonisation.

What Lies Beyond Matt Colborn, 2025-05-27 Paranormal experiences - why they matter and how they can help make a better tomorrow.

Moral Leadership in Medicine Suzanne Shale, 2011-12-22 What are the moral challenges that confront doctors as they manage healthcare institutions? How do we build trust in medical organisations? How do we conceptualize moral action? Based on accounts given by senior doctors from organisations throughout the UK, this book discusses the issues medical leaders find most troubling and identifies the moral tensions they face. *Moral Leadership in Medicine* examines in detail how doctors protect patients' interests, implement morally controversial change, manage colleagues in difficulty and rebuild trust after serious medical harm. The book discusses how leaders develop moral narratives to make sense of these situations, how they behave while balancing conflicting moral goals and how they influence those around them to do the right thing in difficult circumstances. Based on empirical ethical analysis, this volume is essential reading for clinicians in leadership roles and students and academics in the fields of healthcare management, medical law and healthcare ethics.

Discovering Careers for Your Future Ferguson, 2009

The Future in the Stars Alison Chester-Lambert, 2010-09-01 Predicting changes and trends for the future, this fascinating exploration debunks the myths surrounding 2012 to provide a logical and spiritual theory. Wild claims and bad astronomy have fuelled a doomsday sensation about that energetic and special year, yet little or none is mentioned about the key planets sending the messages—Pluto, Chiron, Cere, Makemake, Eris, and Sedna, as well as some newly discovered planets. This resource delves deep into these important astrological beings to reveal what will really happen in 2012 and how the gods and goddess of these planets will help humanity navigate financial, social, and physical revolutions. Part history, scientific theory, and spiritual insight, this cutting-edge contention provides an understanding not only of 2012 but also of the transformations that will follow.

Airfare of To-day and of the Future Edgar Charles Middleton, 1917

Seven Radical Ideas for the Future of Higher Education Claire Macken, Julie Hare, Kay Souter, 2021-08-07 This book focuses on the disruption of the tertiary higher education system as a result of societal changes occasioned by the Fourth Industrial Revolution and hastened by COVID-19. It takes the view that higher education is on an inevitable trajectory of disruption as a result of globalisation, technological disruption, and disaggregation of the formal education sector but that it must not lose sight of its central role in equipping current and future students for the new economy. The book takes a student-centric - and big-picture approach - examining some of the biggest challenges facing massified higher education systems. The authors consider ways to achieve modern, responsive and efficient higher education systems globally that are economically sound for governments and affordable for individuals.

Mapping the Future of Undergraduate Career Education Melanie V. Buford, Michael J. Sharp, Michael J.

Stebbleton, 2022-07-19 This timely book explores current trends and future possibilities for undergraduate career education, the nature of the changing workplace, and its impact on students in colleges and universities. Built on decades of experience in career development and professional learning, the editors raise and investigate multiple critical issues facing career educators in higher education today: preparing students for the future of work; exploring the increasing centrality of experiential learning in career education; examining innovative paradigm shifts in career education; and developing strategies for equity-focused and inclusive programming for all students. Reckoning with the effects of Covid-19 on the world of career development, this book draws on contributions from leading scholars, entrepreneurs, and practitioners from across the fields of education, business, STEM, and the humanities to offer an inclusive and innovation-focused approach to supporting scholars, practitioners, and students involved with career education, development, and counseling for a new generation - and a new world of work.

Manifestos for the Future of Critical Disability Studies Katie Ellis, Rosemarie Garland-Thomson, Mike Kent, Rachel

Robertson, 2018-10-03 This collection identifies the key tensions and conflicts being debated within the field of critical disability studies and provides both an outline of the field in its current form and offers manifestos for its future direction. Traversing a number of disciplines from science and technology studies to maternal studies, the collection offers a

transdisciplinary vision for the future of critical disability studies. Some common thematic concerns emerge across the book such as digital futures, the usefulness of anger, creativity, family as disability allies, intersectionality, ethics, eugenics, accessibility and interdisciplinarity. However, the contributors who write as either disabled people or allies do not proceed from a singular approach to disability, often reflecting different or even opposing positions on these issues. Containing contributions from established and new voices in disability studies outlining their own manifesto for the future of the field, this book will be of interest to all scholars and students working within the fields of disability studies, cultural studies, sociology, law, history and education. The concerns introduced here are further explored in its sister volume *Interdisciplinary approaches to disability: looking towards the future*.
