**Defensas ribereñas con gaviones y geosintéticos** Gerardo Fracassi,2019-03-01 Los revestimientos, muros de contención, diques longitudinales y espigones son apenas algunas de las soluciones para la estabilización, regularización, protección contra la erosión y control de las crecidas en cursos de agua. Defensas ribereñas con gaviones y geosintéticos explica las características de estas obras, los problemas que pueden ser solucionados con ellas y la forma de dimensionarlas. La obra aborda desde la morfología fluvial y los tipos de intervención en un curso de agua hasta la Bioingeniería y los métodos de dimensionamiento. Presente sugerencias para proyectos de estructuras en gaviones y muestra diversos casos reales en que explica detalladamente los problemas encontrados y las soluciones aplicadas, con ilustraciones paso a paso. Es una valiosa referencia para profesionales involucrados en obras de protección y estabilización de márgenes, control del trazado del río y protección contra inundaciones. Esta es la primera publicación de la Colección Maccaferri con soluciones de ingeniería para obras hidráulicas.

**Los procesos de erosión costera** Hugo Donini,2021-09-07 El presente texto desarrolla los principales conceptos para la comprensión de los procesos del transporte de sedimentos, y en particular, de aquellos que generan erosión en las costas de las playas. Se inicia con el tratamiento de los contenidos básicos relacionados con las cartas marinas, los estudios que relevan el mar, las mareas astronómicas, las olas y los sedimentos, de forma de que el lector cuente con una introducción a dichos temas. Para los capítulos se han empleado fotografías, imágenes satelitales, estudios de evolución costera y la experiencia actual existente para mitigar la erosión y proteger nuestras costas. El resultado es un texto que puede ser abordado por cualquier lector interesado en los espacios litorales. Sus diez capítulos han sido ilustrados con doscientas ochenta figuras e imágenes y los conceptos complementados con más de cuarenta ejemplos numéricos. Es el deseo que este libro sea una contribución y un objeto de consulta para aquellos a los que interesa el litoral marítimo.

**Diseño de concreto reforzado** Jack C. McCormac,Russell H. Brown,2017-07-20 El concreto es una mezcla de arena, grava, roca triturada, entre otros materiales, que se encuentran unidos en una masa rocosa por medio de una pasta de cemento y agua. Sin embargo, a pesar de que este material tenga una alta resistencia a la compresión, no pasa lo mismo con

su resistencia a la tensión. A partir de esto, encontramos la importancia del concreto reforzado, ya que éste, gracias al refuerzo de acero del cual está hecho, posee una alta resistencia a la tensión. El acero de refuerzo es también capaz de resistir fuerzas de compresión y se usa en columnas, así como en otros miembros estructurales.
