Unfolding Perceptual Continua Liliana Albertazzi,2002 The book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum. The basic idea is that the continuity of the experience of space and time originates in phenomenic movement. The problem of consciousness and of the spaces of representation is related to the primary processes of perception. Conceived as an interplay between cognitive science, linguistics and philosophy, the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum. Besides presenting the primitives of a theory of cognitive space and time, it presents a theory of the observer, analyzing the relationship among perspective, points of view and unity of consciousness. The book's chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields. Experimental analysis from visual, auditory and tactile perception outline the basic structures of intentionality and its counterpart in language and gesture. (Series B)

Morphology, Phonology, and Aphasia Jean-Luc Nespolous,Pierre Villiard,2012-12-06 Neuropsycholinguistics - the interaction between linguistics, psycholinguistics, and aphasiology - has, over the past two decades, established itself as a multidisciplinary science worthy of its recent attention in Drs. Nespolous and Villiard's Morphology, Phonology and Aphasia. In this new volume in the Springer Series in Neuropsychology, the editors have most successfully developed a multidisciplinary team of research through the organization of two symposia - one on Morphology and Aphasia, the other focused on Phonology and Aphasia. Toward the goal of better understanding the aphasic patients' verbal behavior, the contributing authors of this important work offer their respective expertise, continuing the recent evolution of developments in the fields of morphology and phonology.

Cognitive and Neuropsychological Approaches to Mental Imagery M. Denis,Johannes Engelkamp,John T.E. Richardson,2012-12-06 The locus of concreteness effects in memory for verbal materials has been described here in terms of

the processing of shared and distinctive information. This theoretical view is consistent with a variety of findings previously taken as support for dual coding, insofar as both verbal and perceptual information may be involved in comprehending high-imagery sentences and in learning lists of concrete words. But going beyond previous accounts of imagery, this view also can provide explanations for several findings that appear contradictory to the thesis that concrete and abstract materials differ in the form of their storage in long-term memory. Although this does not rule out a role for imagery in list learning or text comprehension, it is clear that the complex processes involved in comprehension and memory for language go beyond mechanisms supplied by a theory based on the availability of modality-specific mental representations. The task now is to determine the viability of the theory in other domains. Several domains of imagery research presented at EWIC provided fertile ground for evaluating my theoretical viewpoint. Although not all provide a basis for distinguishing representational theories of imagery from the imagery as process view, there are data in several areas that are more consistent with the latter than the former. In other cases, there are at least potential sources of evidence that would allow such a distinction.

Down Syndrome Jean-Adolphe Rondal, PhD,Juan Perera,2006-08-04 People with Down Syndrome show a specific developmental profile with strengths in social understanding and visual learning and memory, and more difficulties with motor processes, speech and language, and auditory-vocal short-term memory. It is important that parents, practitioners and teachers know this and adapt interventions and educational approaches to take account of this particular profile. This is the only book to date that explains the developmental profile of people with Down Syndrome from its many different angles. It covers a range of perspectives, including the biology, psychology, speech and language, health care, and social competence of both children and adults with Down Syndrome. All the information is gathered and placed in the context of the neuro-genetic science that is developing around this area.

Modificazioni espansive dei genitali femminili, tra eredità e ambiente Pia Grassivaro Gallo,Lucrezia

Catania,2015-11-18 Un percorso monografico che affronta il fenomeno delle modificazioni genitali femminili di tipo espansivo in Africa, delineando i tratti fondamentali che tali interventi sottendono nel rito. Dal longinifismo nelle popolazioni ancestrali africane dei Boscimani-Ottentotti alle pratiche culturali, legate all'allungamento labiale, che si riscontrano oggi in

alcune popolazioni del Centro e Sud Africa, sino alle esperienze riscontrate in Occidente - anche in Italia - come conseguenza dei flussi migratori. La morfologia, comune a molte donne africane, che tramite significati rituali e culturali si tramanda nel tempo e nello spazio, si riscopre nei territori nuovi dei traguardi migratori. È stata evidenziata ancora - identificata con il nome di ipertrofia labiale - nelle popolazioni occidentali, anche in Italia, nelle afferenze degli ambulatori ostetrici/ginecologici, misconosciuta e trascurata dai professionisti, finché non venga richiesta la riduzione labiale, attraverso l'intervento di labio-plastica. Un'analisi antropologica puntigliosa, che spazia dalla psicologia della sessualità, alla chirurgia estetica dell'apparato genitale femminile, alle interpretazioni dei significati culturali e rituali sottesi al fenomeno. Un testo fondamentale per completare il significato delle mutilazioni genitali femminili.

Meditazione, mindfulness e neuroscienze AA. VV.,2020-02-07T00:00:00+01:00 Lo studio della mente e dei fenomeni di coscienza costituisce da oltre un secolo uno dei campi di interesse della scienza e della filosofia. Nei primi decenni successivi al secondo dopoguerra, lo studio della coscienza nei suoi termini più introspettivi era considerato pratica vaga ed elusiva, materiale da filosofi, più che da scienziati. La ripresa dell'interesse scientifico per tutto ciò che può essere compreso sotto il termine di "stati di coscienza" ha coinciso, da un lato, con l'impiego di nuove tecniche di osservazione e sperimentazione dell'ambito neuroscientifico, dall'altro, con il fecondo dialogo e lo studio di alcune pratiche meditative provenienti da tradizioni dell'Asia centrale e orientale. Parallelamente, pratiche di meditazione legate alla consapevolezza sono state sempre più inserite in programmi psicoterapeutici per i loro comprovati benefici. In tempi recenti ci si è resi conto di come uno stato mentale possa avere un correlato somatico, in particolare nervoso: può coincidere infatti con differente qualità e quantità del rilascio neurotrasmettoriale, con la modificazione delle connessioni sinaptiche tra neuroni, o incidere nella replicazione del DNA. Questa prospettiva, che sottolinea l'intima connessione tra le proprietà emergenti e le loro basi fisiche, permette di descrivere in modo nuovo il darsi della coscienza e della cognizione, superando la concezione dualistica che oppone rigidamente il corpo e la mente.
