Business Dynamics Models Eugenius Kaszkurewicz, Amit Bhaya, 2022-11-24 This book introduces optimal control methods, formulated as optimization problems, applied to business dynamics problems. Business dynamics refers to a combination of business management and financial objectives embedded in a dynamical system model. The model is subject to a control that optimizes a performance index and takes both management and financial aspects into account. Business Dynamics Models: Optimization-Based One Step Ahead Optimal Control includes solutions that provide a rationale for the use of optimal control and guidelines for further investigation into more complex models, as well as formulations that can also be used in a so-called flight simulator mode to investigate different complex scenarios. The text offers a modern programming environment (Jupyter notebooks in JuMP/Julia) for modeling, simulation, and optimization, and Julia code and notebooks are provided on a website for readers to experiment with their own examples. This book is intended for students majoring in applied mathematics, business, and engineering. The authors use a formulation-algorithm-example approach, rather than the classical definition-theorem-proof, making the material understandable to senior undergraduates and beginning graduates.

SYSTEM DYNAMICS - Volume I Yaman Barlas, 2009-06-29 System Dynamics is a component of Encyclopedia of

Technology, Information, and Systems Management Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The world is facing a wide range of increasingly complex, dynamic problems in the public and private arenas alike. System dynamics discipline is an attempt to address such dynamic, long-term policy problems. Applications cover a very wide spectrum, including national economic problems, supply chains, project management, educational problems, energy systems, sustainable development, politics, psychology, medical sciences, health care, and many other areas. This theme provides a comprehensive overview of system dynamics methodology, including its conceptual / philosophical framework, as well as the technical aspects of modeling and analysis. System dynamics can address the fundamental structural causes of the long-term dynamic contemporary socio-economic problems. Its systems perspective challenges the barriers that separate disciplines. The interdisciplinary and systemic approach of system dynamics could be critical in dealing with the increasingly complex problems of our modern world in this new century. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

The Usage of System Dynamics in Organizational Interventions Birgitte Snabe, 2007-11-30 Birgitte Snabe analyzes how system dynamics modeling can be used in learning processes that focus on the transfer of the insights and reasoning behind a strategy forming process. In a second step, she shows how it can support the refining of implementation plans. A case study in action research tradition completes the theoretical discussions. Its subject is the building up of a large international company's R&D resources in low-cost countries.

Modelling Transitions Enayat A. Moallemi, Fjalar J. de Haan, 2019-11-28 *Modelling Transitions* shows what computational, formal and data-driven approaches can and could mean for sustainability transitions research, presenting the state-of-the-art and exploring what lies beyond. Featuring contributions from many well-known authors, this book presents the various benefits of modelling for transitions research. More than just taking stock, it also critically examines what modelling of transformative change means and could mean for transitions research and for other disciplines that study societal changes. This includes identifying a variety of approaches currently not part of the portfolios of transitions modellers. Far from only singing praise, critical methodological and philosophical introspection are key aspects of this important book. This book speaks to modellers and non-modellers alike who value the development of robust knowledge on transitions to sustainability, including colleagues in congenial fields. Be they students, researchers or practitioners, everyone interested in transitions should find this book relevant as reference, resource and guide.

The Geopolitics of Shale Gas Sijbren de Jong, Willem Auping, Joris Govers, 2014-02-11 The US' shale gas revolution could in the long term destabilize traditional oil- and gas exporters in the European Union (EU) neighborhood: A combination of substitution effects and greater energy efficiency, could put pressure on the price of oil, leading to fiscal difficulties in

traditional hydrocarbon exporting countries.

THE NETHERLANDS IN THE GLOBAL FOOD SYSTEM Eline Chivot, Willem L. Auping, Sijbren de Jong, Hannes Rõõs, Michel Rademaker, 2016-11-22 This study addressed the question of future food challenges and how these may play out. Part of the analysis focused on the question as to how we may enhance our understanding of the effects of climate change, increased population growth and rising incomes worldwide on future food systems. The worldwide food system is vulnerable to many influences. The approach used in this study focused on the most significant possible influencers of drivers, or the elements having the most effect on how drivers will develop. This approach was employed due to our understanding that the system's complexity cannot be reduced to the drivers alone. The applied research method however allows us to look at the different aspects while recognizing their interlinkages.

Knowledge Construction Methodology Yoshiteru Nakamori, 2019-08-30 This book demonstrates that innovative ideas are

systematically constructed in the creative space spanned by the dimensions of systems thinking and knowledge management. Readers will be introduced to this proposition in the final chapter, after learning about the key innovation theories, design thinking, systems thinking, and idea creation methods in systems science and knowledge science. The content provided throughout the book supports knowledge creation in various fields, the management of research and business projects, and the creation of promotion stories for products and services. Practitioners who are seeking to create innovative ideas can systematically learn the minimum theories and methods required, while graduate students will be equipped to link their research to innovation by learning the essence of systems science and knowledge science and considering selected issues. Lastly, the book includes suggestions for future research directions in knowledge science.

Working Through Synthetic Worlds Kenneth W. Kiesel, 2018-04-17 Virtual environments (VE) are human-computer interfaces in which the computer creates a sensory-immersing environment that interactively responds to and is controlled by the behaviour of the user. Since these technologies will continue to become more reliable, more resolute and more affordable, it's important to consider the advantages that VEs may offer to support business processes. The term 'synthetic world' refers to a subset of VEs, having a large virtual landscape and a set of rules that govern the interactions among participants. Currently, the primary motivators for participation in these synthetic worlds appear to be fun and novelty. As the novelty wears off, synthetic worlds will need to demonstrate a favourable value proposition if they are to survive. In particular, non-game-oriented worlds will need to facilitate business processes to a degree that exceeds their substantial costs for development and maintenance. *Working Through Synthetic Worlds* explores a variety of different tasks that might benefit by being performed within a synthetic world. The editors use a distinctive format for the book, consisting of a set of chapters composed of three parts: ¢ a story or vignette that describes work conducted within a synthetic world based loosely on the question, 'what will work be like in the year 2025?', founded on the expert authors' expectations of plausible future technologies ¢ a scholarly review of the technologies described by the stories and the current theories related to those technologies ¢ a prescription for future research required to bridge the current state-of-the-art with the notional worlds described in the stories. The book will appeal to undergraduate and graduate students, professors, scientists and engineers, managers in high-tech industries and software developers.

Quantitative Intelligence Analysis Edward Waltz, 2014-10-16 Quantitative Intelligence Analysis describes the model-based method of intelligence analysis that represents the analyst's mental models of a subject, as well as the analyst's reasoning process exposing what the analyst believes about the subject, and how they arrived at those beliefs and converged on analytic judgments. It includes: Specific methods of explicitly representing the analyst's mental models as computational models; dynamic simulations and interactive analytic games; the structure of an analyst's mental model and the theoretical basis for capturing and representing the tacit knowledge of these models explicitly as computational models detailed

description of the use of these models in rigorous, structured analysis of difficult targets; model illustrations and simulation descriptions; the role of models in support of collection and operations; case studies that illustrate a wide range of intelligence problems; And a recommended curriculum for technical analysts.

Focus Daniel Goleman, 2013-10-08 Bestselling author Daniel Goleman returns with a groundbreaking look at the secret to high performance and fulfillment: attention. 'A highly readable manifesto for turning our smartphones off once in a while' Financial Times For more than two decades, psychologist and journalist Daniel Goleman has been scouting the leading edge of the human sciences for what's new, surprising and important. In Focus, Goleman delves into the science of attention in all its varieties, presenting a long overdue discussion of this little-noticed and underrated mental asset that matters enormously for how we navigate life. Goleman boils down attention research into a three parts: inner, other, and outer focus. Goleman shows why high-achievers need all three kinds of focus, as demonstrated by rich case studies from fields as diverse as competitive sports, education, the arts, and business. Those who excel rely on what Goleman calls 'Smart Practices' such as mindfulness meditation, focused preparation and recovery, positive emotions and connections, and mental 'prosthetics' which help them improve habits, add new skills, and sustain excellence. Combining cutting-edge research with practical findings, Focus reveals what distinguishes experts from amateurs and stars from average performers.

Systems Thinking View on the Situation of Unemployment in the USA Roland Schuster, 2003-08-27

Inhaltsangabe: Abstract: The diploma thesis Systems Thinking View on the Situation of Unemployment in the United States was performed at the University of California San Diego at the Department of Sociology with advise of Prof. John Evans PhD in cooperation with the Institute of Industrial Engineering, Ergonomics and Business Economics with advise of O.Univ.Prof. Dipl.-Ing. Dr.techn. Franz Wojda and Ass.Prof. Dipl.-Ing. Dr.techn. Walter Hackl-Gruber by Roland Schuster. It is in accordance to a specialization in leadership and organization. The diploma thesis has its roots in the general system theory and emphasizes on a holistic view on the situation of unemployment in the United States. The chosen approach is a combination of state of the art scientific knowledge from the fields of sociology, psychology and economy. In the previous work performed for the thesis it was detected that the diversity of the basic approach is necessary in meeting the complexity of the issue. The many different factors influencing the chosen topic of unemployment are widespread. Contributing to the theory of systems thinking the goal of the thesis was to find and describe an existing pattern that makes it possible to see the dynamic of the system. The systemic view takes in account that everything is interconnected and hence interacting. Systems thinking states that there are effects and influences on- and by unemployment that are only visible in applying a holistic view. The reason why the present paper is groundbreaking is not so much because of the used scientific knowledge, which is state of the art, but because of the combination of this knowledge. This combination is meant to regard to one of the tasks given by cybernetics in increasing differentiation instead of increasing growth. The basic standpoint is that the quantity of existing

knowledge is already enough to create possible approaches for ways to optimize the current situation. Only lacking is the understanding of how all the fragments are connected. Systems thinking, an application of system theory, in this context, is seen as a tool that makes it possible to develop a model to generate this understanding. The thesis provides a brief overview of the United States Unemployment Insurance System and a systems thinking approach used for an interpretation of the current situation in the United States. The diploma thesis is seen as basic work for further research on the situation of unemployment in the [...]

High Wire Angela Huyue Zhang, 2024 High Wire provides a novel and comprehensive analysis of how China regulates its tech sector and more broadly governs its economy. It focuses on electronic platform regulation in three key areas: antitrust, data, and labor. It also explains how Chinese platforms regulate themselves outside of state control, and how the two modes--public and self-regulation--interact. Finally, High Wire shows how the current tech crackdown in China is shaping the country's transition from soft-tech to hard-tech and considers how China will regulate the rapidly expanding field of generative artificial intelligence.
