Pequeñas centrales hidroeléctricas Ramiro Ortiz Flórez,2011-01-01 La energía eléctrica a partir su aplicación comercial ha sido un factor determinante para la economía y el desarrollo social; que si bien inicialmente fue utilizada para los sistemas de alumbrado público, posteriormente a la vez que se convirtió en la fuerza motriz que necesitaba la industria y el comercio, también se constituyó como una herramienta necesaria para el comodidad de los hogares. A revisar la historia, las primeras centrales generación de energía eléctrica fueron hidráulicas de baja potencia con generadores de corriente continua; posteriormente se logró aumentar la potencia y capacidad de transmisión al utilizar generadores de corriente alterna, esto conllevó a que hasta mediados de la primera mitad del siglo XX, la mayor parte de la generación se diera con pequeñas centrales hidroeléctricas PCHs, las cuales estaban dirigidas por empresas de energía eléctrica, que nacieron y se consolidaron como fruto de los esfuerzos locales, creciendo sin una directriz central y sin una visión de planificación unificada a nivel nacional. No obstante, con el fin de aunar esfuerzos, interconectar sus sistemas, realizar una planeación integral y una operación conjunta, las diferentes empresas de energía se interconectaron en un sistema energético nacional. Esta forma de suministro de energía eléctrica hizo que las PCHs cayeran en el olvido; sin embargo el monopolio del Estado dio lugar a ineficiencias técnicas y económicas, que en conjunto con el endeudamiento, colocaron las finanzas del sector eléctrico en condiciones precarias. Razón por la cual el Estado dejó de ser el monopolio y cambió a un esquema de un mercado regulado en donde la generación con fuentes renovables y en particular las PCHs es importante frente a la generación con combustibles fósiles.

Pequeñas centrales hidroeléctricas. 2da. Edicion Ramiro Ortiz Florez,2022-01-28 Al revisar la historia, la energía eléctrica, a partir de su aplicación comercial, ha sido un factor determinante para la economía y el desarrollo social que, si bien inicialmente fueron hidráulicas de baja potencia con generadores de corriente continua, posteriormente se logró aumentar la potencia y la capacidad de transmisión al utilizar generadores de corriente alterna. Este tipo de generación con Pequeñas Centrales Hidroeléctricas (PCH) primó hasta mediados de la primera mitad del siglo XX. No obstante, con el fin de aunar esfuerzos, se tomó la decisión de sustituir las PCH por grandes proyectos e interconectarlos para crear un Sistema Energético Nacional. Sin embargo, el monopolio del Estado dio lugar a ineficiencias técnicas y económicas que, en conjunto con el endeudamiento, colocaron las finanzas del sector eléctrico en condiciones precarias, razón por la cual el Estado dejó de ser el monopolio para ser el ente regulador del servicio de energía eléctrica, escenario en el cual la generación con PCH es importante frente a la generación con combustibles fósiles. Dada la importancia que se requiere al decidir la construcción de una PCH, se necesita de un apoyo escrito que permita realizar el dimensionamiento de una pequeña central hidroeléctrica con criterio técnico y económico. Por tal motivo, se organizó la información necesaria para el dimensionamiento de una PCH

partiendo de unos conocimientos básicos de hidráulica, mecánica y de máquinas eléctricas, complementados con aplicaciones SIG para la evaluación de recursos hidroenergéticos y el uso de máquinas reversibles.
