**Utilización agroindustrial del nopal** Carmen Sáenz,Horst Berger,2006-01-01 El nopal es un cultivo que contribuye a la alimentacion, la nutricion y la salud de los seres humanos. Ademas es utilizado en la agroindustria alimentaria, complementa la alimentacion animal, es fuente potencial de bioenergia y ayuda a un mejor manejo del medio ambiente. Esta cactacea del genero Opuntia y de la cual se conocen mas de 300 especies, es originaria de Mesoamerica y hoy esta difundida en todo el mundo, especialmente en areas con poca disponibilidad de agua. Presenta una gran versatilidad de adaptacion a distintas zonas agroecologicas en algunas de las cuales la agricultura enfrenta dificultades para su desarrollo. El nopal ofrece posibilidades economicamente sostenibles a innumerables grupos de pequenos agricultores y el uso racional de este recurso renovable y su utilizacion en la agroindustria pueden contribuir decisivamente a mejorar las condiciones de vida de numerosas familias campesinas. Esta publicacion reune aspectos tecnicos referidos concretamente al uso agroindustrial del nopal, incluyendo en sus 10 capitulos los puntos mas relevantes de los procesos artesanales y de los procesos de la pequena y mediana agroindustria. Contiene una breve revision de experiencias en el campo y las posibilidades y estrategias para el desarrollo y aprovechamiento agroindustrial del cultivo.

*Procesos de elaboración de alimentos y bebidas* SÁNCHEZ PINEDA DE LAS INFANTAS, M.T.,2003-01-01 Hacia finales del siglo XIX el incremento del conocimiento científico permitió la transformación de la industria artesanal en una industria basada en el conocimiento científico, fenómeno que todavía se persigue en la actualidad. Fue en ese momento cuando se puede considerar que nacieron las Industrias Agrarias. Las Industrias Agrarias emplean fundamentalmente materias primas de origen vegetal o animal cuyas características las hacen fácilmente alterables o degradables. Se trata de materias vivas antes o incluso a veces durante el procesado, cuyos componentes orgánicos constituyen un medio de vida adecuado para el desarrollo microbiano y un sustrato apto para la acción enzimática y el desequilibrio de componentes constitutivos con posibilidad de modificación sensorial y nutricional. Por otra parte, presentan siempre una considerable dispersión en sus propiedades y características tanto en el tiempo como en el espacio lo cual es un grave inconveniente a la hora de elaborar productos que deban responder a una adecuada homogeneidad y ser estables durante el almacenamiento. La obra ha sido

dividida en secciones dedicadas a los principales tipos de industrias. En cada uno de los capítulos que componen estas secciones, he abordado el estudio y conocimiento de las materias primas y de los productos elaborados, la ingeniería de diseño y de los procesos elegidos, así como la implantación del sistema APPCC en cada una de las industrias seleccionadas.

Espinosa,2020-07-29 Una de las tareas fundamentales de la la Benemérita Universidad Autónoma de Puebla es el desarrollo de proyectos de investigación teórica y aplicada vinculados con el entorno social y que cubra las necesidades del sector Agropecuario es el desarrollo estudios relacionados con el procesamiento de la pitaya y que por medio de la Facultad de Ingeniería Química, existe un equipo integrado por catedráticos y alumnos de la carrera de Ingeniería Química y de Alimentos trabajando a nivel laboratorio para tener caracterizados los productos que pueden obtenerse a partir del procesamiento de pitaya, lo cual establece un primer aspecto fundamental para poder lograr un dimensionamiento de los equipos posibles que se requerirán en caso de llevar a cabo el proyecto de procesarlos en grandes escalas. Y que sentará las bases para tener bien definido las acciones a seguir para concretar el trabajo completo que se espera sea la construcción de la planta y la puesta en marcha de la producción de pitaya en diferentes tipos de productos que sean atractivos para la sociedad a la que van a estar dirigidos.

En la obra que se acaba de concluir participaron la Universidad de la Amazonia, el Instituto Amazonico de Investigaciones Cientificas SINCHI y el Ministerio de Ambiente, Vivienda y Desarrollo Territorial. **Una práctica teoría de la optimización lineal** Marcos Singer,2013 La ciencia cuantitativa de la administración es la teoría que utiliza modelos cuantitativos para apoyar la toma de decisiones. Surgió durante la Segunda Guerra Mundial como

resultado del rol que tuvo el mundo científico en la conducción del Ejército Aliado. Mientras Adolf Hitler se asesoraba por adivinos y astrólogos, Winston Churchill y Franklin D. Roosevelt se rodearon de los mejores científicos de la época. Al terminar la guerra, muchos de estos asesores científicos se abocaron al estudio de los modelos matemáticos y su aplicación a los problemas de las empresas e instituciones. Uno de los asesores fue George Dantzig, quien descubrió que muchos problemas de decisión tienen una estructura similar, lo cual permite resolverlos mediante un mismo método, que denominó Simplex. Hoy en día las planillas de cálculo incluyen de manera estándar éste y otros métodos de optimización, lo que permite tomar decisiones "científicas" con relativa facilidad. El objetivo de este libro es presentar la teoría y la práctica de la optimización, aplicada a empresas e instituciones. Para ello el libro desarrolla casos (varios en Microsoft Excel) en diferentes industrias (manufactura, servicios, minería, agro, gobierno) respecto de diferentes ámbitos (producción, logística, gestión comercial, finanzas, recursos humanos). El libro también describe los aspectos teóricos de la optimización y su interpretación económica. Con ello se espera que el lector comprenda de manera más profunda la optimización, y así domine los diferentes elementos de un problema de decisión.

Ecología del cultivo, manejo y usos del nopal Food and Agriculture Organization of the United Nations, 2018-06-22 Las cactáceas están siendo de creciente interés alrededor del mundo en particular el nopal (*Opuntia ficus-indica*) debido a sus características únicas, las cuales le proveen resiliencia a las condiciones limitantes previamente mencionadas. El nopal es capaz de crecer en tierras donde otros cultivos no prosperan. Puede ser usado para la restauración de tierras degradadas en muchos países, tales como Etiopía, es el único cultivo en el cual se puede confiar donde todos los demás han fallado. El cultivo se originó en México quien es todavía el mayor productor y consumidor del mundo, pero otros países incluyendo: Marruecos, Etiopía, Sudáfrica, Kenia, India y Pakistán, están incrementando su producción y uso.
