Control de la calidad del agua Walter J. Jr Weber,2021-02-22 La obra está redactada de tal forma que puede utilizarse como un libro de texto para: un curso amplio de un semestre de duración sobre los procesos físico-químicos, durante el cual se expliquen extensamente los doce capítulos; y un curso de un semestre de duración durante el cual se estudien con profundidad los capítulos que tratan de los procesos convencionales y de los que se aplican corrientemente; o como en nuestra opinión sería más conveniente, un curso de dos semestres durante el cual se estudien con profundidad los conceptos sobre la dinámica de procesos y todas las materias del libro.

Diccionario visual de arquitectura Francis D.K. Ching,2016-06-01 La extensa y reconocida aportación de Francis D. K. Ching al mundo del dibujo arquitectónico sería incompleta si el célebre maestro no hubiera hecho una incursión en el ámbito de los diccionarios visuales. Este volumen nos brinda precisamente su particular contribución al universo de la terminología arquitectónica y, alejándose de los diccionarios alfabéticos al uso, Ching compone un diccionario visual sistemático que reúne más de 7.000 definiciones organizadas en 66 conceptos básicos del diseño arquitectónico. El resultado es una amplia panorámica gráfica y conceptual de la terminología del ámbito de la arquitectura y de las interrelaciones que se establecen entre los términos. Al final del volumen, el diccionario incorpora asimismo la lista alfabética en español de los términos definidos, así como su traducción al inglés y viceversa, de manera que el lector podrá realizar consultas de términos precisos también por orden alfabético. Un diccionario fundamental, ya clásico, de los ámbitos de la arquitectura y la construcción.

Tratamiento de aguas residuales Rubens Sette Ramalho,2021-02-22 Este libro es una introducción al tratamiento de aguas residuales industriales y domésticas, dirigida tanto a estudiantes como a licenciados en Ingeniería, Biología, Química, etc. interesados en este tema.

Tratamiento biológico de aguas residuales: principios, modelación y diseño C. M. Lopez-Vazquez,G. Buitrón Méndez,F.J. Cervanes Carrillo,H.A. Hernández García,2017-11-15 En las últimas décadas, el conocimiento y entendimiento del tratamiento de aguas residuales ha avanzado extensamente evolucionando de enfoques basados en procedimientos meramente empíricos a enfoques con principios básicos que abarcan la química, microbiología, física, ingeniería de procesos y matemáticas. La gran mayoría de estos avances han madurado a tal grado que han sido codificados en modelos matemáticos para su simulación en computadoras. Para una nueva generación de jóvenes científicos e ingenieros que ingresan al área del tratamiento de aguas residuales, la cantidad, complejidad y diversidad de estos nuevos desarrollos puede ser abrumador, particularmente en países en vías de desarrollo donde no existe un fácil acceso a cursos avanzados de postgrado en tratamientos de aguas residuales. Este libro tiene como objetivo resolver esta deficiencia ya que compila e integra el material de diversos cursos de postgrado de más de una docena de grupos de investigación de todo el mundo que han hecho contribuciones significativas para el desarrollo del tratamiento de aguas residuales. Cabe resaltar que la edición en inglés del presente libro, forma parte de un plan de estudios en tratamiento biológico de aguas residuales que incluye:

- Resúmenes de las presentaciones y clases de los temas cubiertos en el libro
- Videos de las clases de los profesores autores de los capítulos del libro
- Ejercicios de auto-aprendizaje para los participantes en los cursos

Al término del plan de estudios antes mencionado, los últimos avances en modelación y simulación de la operación y diseño de los sistemas de tratamiento de aguas residuales (ya sean lodos activados, procesos de remoción biológica de nitrógeno y fósforo, clarificadores secundarios o sistemas de biopelículas) pueden ser abordados con mayor profundidad, conocimientos más avanzados y mayor confianza.

Nunca subas a un bus amarillo Nando Suarez,2020-02-21 En estas historias los protagonistas se pierden, deambulan, se contemplan vivir... A menudo se duermen. Todos coinciden en impulsar, a ciegas, el movimiento hacia una caída. Atmósferas inquietantes, existencias abruptas en las que el absurdo o la locura parecen formas premeditadas de fuga. La risa y la melancolía, dos caras de la misma medalla. El autor juega con sus propios fantasmas, haciéndolos habitar lo concreto sin privarnos del necesario impacto de lo invisible.\r\n\r\nC.
