Generaciones cuánticas Helge Kragh,2007-02 La primera historia exhaustiva de la física del siglo XX en un solo volumen es un libro que nos lleva desde el descubrimiento de los rayos X a mediados de la década de 1890 hasta la teoría de las supercuerdas de los años noventa. A diferencia de las historias de la física narradas sólo desde una perspectiva científica, o desde una perspectiva social e institucional, Generaciones cuánticas combina ambas aproximaciones: Kragh escribe sobre la ciencia pura con la experiencia de un físico competente, pero con un estilo ameno y accesible para los no especialistas, prestando atención a las aplicaciones prácticas de la ciencia, desde los discos compactos hasta las centrales nucleares.

Historia de las telecomunicaciones José Antonio Martín Pereda, 2022-05-10 Desde los sistemas de radio, la patente 7777 y las comunicaciones en los tiempos de la Gran Guerra a la revolución electrónica del siglo XIX, la televisión o la comunicación móvil. ¿Cuáles fueron las primeras formas de telecomunicación? ¿Cómo influenció la Revolución francesa en el desarrollo de las tecnologías de información? ¿Cuál fue la repercusión de la electricidad en los sistemas de telegrafía? ¿Sabía que un pintor, Samuel Morse, motivado por la lentitud de la llegada de noticias tras el fallecimiento de su esposa, fue el inventor de un sistema de telegrafía y del inmortal código que llevaría su apellido? ¿Qué supuso la epopeya de la telegrafía submarina? ¿Cómo se logró la magia de la transmisión de la voz?... La historia de las telecomunicaciones es el apasionante relato de cómo la tecnología dio nuevas herramientas al ser humano para que, sin necesidad de desplazarse, alcanzara mayores distancias y se relacionara con otros semejantes a los que no había visto jamás; es la historia de la creación de instrumentos que permitieron llegar al sueño de estar en contacto con otros entornos sin haber salido del propio. Y, al mismo tiempo, el sentir desvanecerse las limitaciones de espacio y tiempo. En esta obra, José Antonio Martín Pereda, nos sumerge de forma magistral en el fascinante mundo de las telecomunicaciones enlazando el desarrollo tecnológico, sus personajes y grandes logros, con el avance de las sociedades hasta llegar a la actualidad, en lo que no deja de ser el prólogo de lo que vendrá después. «José A. Martín Pereda vislumbró e impulsó una nueva era de las telecomunicaciones con su trabajos sobre Comunicaciones Ópticas y Fotónica». José María Hernando, catedrático emérito. «La historia de la Humanidad es la historia de las relaciones entre los individuos, los grupos y las naciones. Y esa historia siempre ha dependido de la forma por la que se relacionaban y de la manera como efectuaban sus comunicaciones. Muchas historias hubieran sido diferentes si alguna noticia hubiera llegado unos momentos antes, o si hubiera llegado a más personas en lugar de solo a unas pocas».

Trabajos de Cristal Simon Schaffer, 2011 Trabajos de cristal es un conjunto de ensayos y artículos, reunidos por primera vez y traducidos al castellano, de uno de los grandes historiadores de la ciencia, Simon Schaffer. Los episodios aquí descritos comprenden desde unas portentosas transfusiones de sangre animal en la Inglaterra de la Restauración, hasta las ideas físicas y los intereses comerciales que impulsaron el negocio de las pompas de jabón en la era victoriana, pasando por las vicisitudes del experimento crucial de la óptica newtoniana, el secreto del autómata ilustrado que jugaba al ajedrez o la extraña vida social de los instrumentos astronómicos en la China y el Pacífico en la Ilustración. Trabajos de cristal quiere recoger la transparencia y la visualización de los hechos, pero también su carácter contingente, la fragilidad sobre la que se construye el edificio del saber. Schaffer desmenuza en estos nueve capítulos la trama artesanal y mundana de las operaciones científicas, indaga en sus múltiples significados y traza los intercambios con otras formas de cultura. Su mirada

antropológica escruta lo que sucede fuera y dentro del laboratorio, siempre dispuesto a problematizar lo trivial, simplificar lo complejo, no dar nunca nada por hecho y menos aún lo que parece evidente.
