The National Parks of Indonesia Jatna Supriatna, Chris Margules, 2025-08-30 This book contains information on geographic location and park size, climate, topography, history of each park, and biodiversity and ecosystems. It also contains information on local communities adjacent to each park, or in some cases within the parks, and their culture, tourism opportunities, access, tourist facilities nearby, and how to find the park office to get a visitor's permit. The 55 parks currently declared span the length and breadth of the country. They provided the last remaining refuges for many of Indonesia's charismatic species, such as tigers, elephants, rhinoceros, and orangutans.

Community, Environment and Local Governance in Indonesia Carol Warren, John F. McCarthy, 2012-09-10 This book explores the forces reconfiguring local resource governance in Indonesia since 1998, drawing together original field research undertaken in a decade of dramatic political change. Case studies from across Indonesia's diverse cultural and ecological landscapes focus on the most significant resource sectors - agriculture, fisheries, forestry, mining and tourism

-providing a rare in-depth view of the dynamics shaping social and environmental outcomes in these varied contexts. Debates surrounding the 'tragedy of the commons' and environmental governance have focused on institutional considerations of how to craft resource management arrangements in order to further the policy objectives of economic efficiency, social equity and environmental sustainability. The studies in this volume reveal the complexity of resource security issues affecting local communities and user groups in Indonesia as they engage with wider institutional frameworks in a context driven simultaneously by decentralizing and globalizing forces. Through ground up investigations of how local groups with different cultural backgrounds and resource bases are responding to the greater autonomy afforded by Indonesia's new political constellation, the authors appraise the prospects for rearticulating governance regimes toward a more equitable and sustainable 'commonweal'. This volume offers valuable insights into questions of import to scholars as well as policy-makers concerned with decentralized governance and sustainable resource management.

Proceedings Daniel Stietenroth, 2005 This international symposium featured three interconnected thematic foci of interdisciplinary research. They focussed on the changes in the extent and intensity of agricultural and forest land use in tropical forest margins and their implications for rural development and for conservation of natural resources such as biodiversity, soils and water. The symposium took place in Goettingen. Almost 130 international authors have contributed a short abstract and their address.

Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia Gerhard Gerold, Michael Fremerey, Edi Guhardja, 2013-06-29 Southeast Asia constitutes one of the world's most extended rainforest regions. It is characterized by a high degree of biodiversity and contains a large variety of endemic species. Moreover, these forests provide a number of important and singular ecosystem services, like erosion protection and provision of high quality water, which cannot be replaced by alternative ecosystems. However, various forms of encroachment, mostly those made by human interventions, seriously threaten the continuance of rainforests in this area. There is ample evidence that the rainforest resources, apart from large scale commercial logging, are exposed to danger particularly from its margin areas. These areas, which are characterized by intensive man-nature interaction, have been identified as extremely fragile systems. The dynamic equilibrium that balances human needs and interventions on the one hand, and natural regeneration capacity on the other, is at stake. The decrease of rainforest resources is, to a substantial degree, connected with the destabilization of these systems. Accordingly, the search for measures and processes, which prevent destabilization and promote stability is regarded as imperative. This refers to both the human and the natural part of the forest margin ecosystem.

Field Guide to the Primates of Indonesia Jatna Supriatna, 2022-01-25 This primate field guide can be used to refer to information on each species, or it can be used to find which species exist on each island, as shown at the back of the book. A list of primates in Indonesia is provided with local, English, and scientific names. Once the name is identified the user can go to the description of the genus and species. Also given is the conservation status of each species except for the most recently described, whose status is not yet known. The information on each species' natural history, behavior, ecology, and where to see it in parks and/or forested areas outside parks is included. Field Guide to the Primates of Indonesia primate drawings are by Stephen Nash and photographs were donated by many of the author's friends from Indonesia and abroad.

The Dialectical Primatologist Nicholas Malone, 2021-10-24 The Dialectical Primatologist identifies the essential parameters vital for the continued coexistence of hominoids (apes and humans), synthesising primate research and conservation in order to develop culturally compelling conservation strategies required for the facilitation of hominoid coexistence. As unsustainable human activities threaten many primate species with extinction, effective conservation strategies for endangered primates will depend upon our understanding of behavioural response to human-modified habitats. This is especially true for the apes, who are arguably our most powerful connection to the natural world. Recognising the inseparability of the natural and the social, the dialectical approach in this book highlights the heterogeneity and complexity of ecological relationships. Malone stresses that ape conservation requires a synthesis of nature and culture that recognises their inseparability in ecological relationships that are both biophysically and socially formed, and seeks to identify the

pathways that lead to either hominoid coexistence or, alternatively, extinction. This book will be of keen interest to academics in biological anthropology, primatology, environmental anthropology, conservation and human-animal studies. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

Robins and Chats Peter Clement, 2016-01-28 This authoritative handbook, part of the Helm Identification Guides series, looks in detail at the world's 170 species of robins and chats. This large family of small passerines was formerly considered to be part of the thrush family (Turdidae), but is now usually treated as a separate family, Muscicapidae, together with the Old World flycatchers. The vast majority of species are Eurasian or African, with only a handful of species straying into the New World or Australasia. The Australian Robins, although superficially similar, have long been regarded as a separate family. Robins and chats are a diverse family comprising both highly colourful and visible species, such as the robin-chats of Africa, as well as some of the most skulking and elusive birds, such as the shortwings of Asia. Many chats, such as the well-known Nightingale, are renowned songsters, and a good number are highly sought-after by world listers for their extreme rarity or simply because they are hard to see. This book discusses the identification and habits of these birds on a species-by-species basis, bringing together the very latest research with accurate range maps, more than 600 stunning colour photographs that illustrate age and racial plumage differences, and 64 superb colour plates by the internationally renowned artist, Chris Rose. This authoritative and sumptuous book will be an essential purchase for all chat enthusiasts, and will become the standard reference on the subject for many years to come.

The Promise of Contemporary Primatology Erin P. Riley, 2019-08-19 This book argues for a contemporary primatology that recognizes humans as integral components in the ecologies of primates. This contemporary primatology uses a broadened theoretical lens and methodological toolkit to study primate behavior and ecology in increasingly anthropogenic contexts and seeks points of intersection and spaces for collaborative exchange across the natural sciences, social sciences, and humanities. The book begins by exploring the American tradition of anthropology, providing historical and disciplinary context for the emergence of field primatology and how it became a part of this tradition. It then examines how primatology transformed into a field dominated by evolutionary approaches and highlights how the increasingly anthropogenic environments in which primates live present opportunities to understand primate adaptability at work. In doing so, it explores how an extended evolutionary approach can help explain behavioral variation in these contemporary environments. Focus is then given to the ethnoprimateological approach, a contemporary approach that provides a pluralistic framework, drawing from the natural and social sciences and humanities, needed to study human-primate coexistence in the Anthropocene. Finally, the book considers how such a crossing of disciplines can inform primate conservation in the future.

An important interdisciplinary reassessment, this book will be of significant interest to primatologists, biological anthropologists, and scholars of anthropology more generally, as well as evolutionary and conservation biologists.

The Politics of Species Raymond Corbey, Annette Lanjouw, 2013-09-05 The assumption that humans are cognitively and morally superior to other animals is fundamental to social democracies and legal systems worldwide. It legitimises treating members of other animal species as inferior to humans. The last few decades have seen a growing awareness of this issue, as evidence continues to show that individuals of many other species have rich mental, emotional and social lives. Bringing together leading experts from a range of disciplines, this volume identifies the key barriers to a definition of moral respect that includes nonhuman animals. It sets out to increase concern, empathy and inclusiveness by developing strategies that can be used to protect other animals from exploitation in the wild and from suffering in captivity. The chapters link scientific data with normative and philosophical reflections, offering unique insight into controversial issues around the ethical, political and legal status of other species.

Primate Ecology and Conservation Eleanor Sterling, Nora Bynum, Mary Blair, 2013-04-04 The study of primate ecology and conservation has advanced rapidly in recent years. This practical volume brings together a group of distinguished primate researchers to synthesize field, laboratory, and conservation management techniques for primate ecology and conservation. The synthesis focuses on new and emerging field methods alongside a comprehensive presentation of laboratory and data analysis techniques, as well as the latest methods for determining conservation status and conservation management. This book's particular focus is on innovative ways to study primates in a changing world, including emerging methods such as non-invasive genetic techniques and advanced spatial modeling. In addition to synthesizing field and lab methods, the authors also discuss data interpretation, as well as important guiding questions and principles for students and researchers to consider as they plan research projects in primate ecology and conservation such as: how to choose a field site, acquire research permits, connect with local authorities, communities and researchers, and many other considerations. Although three chapters are dedicated to conservation methods, consideration of conservation status and threats to primate populations are considered throughout this volume where appropriate. This latest publication in the Techniques in Ecology and Conservation Series aims to provide a practical empirical reference text with an international scope, appropriate for graduate students, researchers, and conservation professionals across the globe.

Conserving and Valuing Ecosystem Services and Biodiversity K N Ninan, 2012-05-04 This book comprehensively addresses the economic, social and institutional difficulties in conserving biodiversity and the ecosystem services that it provides. It covers a wide range of issues such as biodiversity, ecosystem services and valuation in the context of diverse ecosystems such as tropical forests, marine areas, wetlands and agricultural landscapes, non-timber forest products, incentives and institutions, payments for ecosystem services, governance, intellectual property rights and the protection of

traditional knowledge, management of protected areas, and climate change and biodiversity. It also covers the application of environmental economics and institutional economics to different cases and the use of techniques such as contingent valuation method and game theory. The book spans the globe with case studies drawn from a cross section of regions and continents including the UK, US, Europe, Australia, India, Africa and South America.
