That Awkward Age Mary Selby, 2012-05-30 When Robert Peabody, the new vicar, moved into the village of Bumpstaple, the villagers were naturally agog. And when they discovered that, not only was he handsome enough to send the spinsters of the parish all a-flutter, he was also divorced, and a single parent, it was agreed that he could not be allowed to remain single for long. Mavis Entwistle, whose pastry had caused successive vicars to consider fasting as a desirable alternative lifestyle, had decided that her surprisingly lovely daughter Sally (for Mavis was no more endowed with a beautiful face than with a light hand at the pastryboard) would make the perfect vicar's wife. Sally, having beaten off her mother's attempts to marry her off to the washing machine repair man, the milkman and the baker's assistant, refused to meet this latest candidate for her hand, until a chance encounter in the mobile library led to some surprising and decidedly un-vicarish behaviour. Robert's son, meanwhile, was trying to cope with adolescent confusion in the form of Claire, whom he met on the school bus. Claire had quite enough to cope with, what with her spots and the dreadful embarrassment of her mother Tessa's advancing pregnancy - and at her age, too! And as though this were not enough, she was having to put up with the child from her hell, her cousin Hugh, who had come to stay while his parents were abroad. When Robert planned to hold a new-style Carol Service and Hugh decided to introduce a little realism into the Christmas story in the shape of Tessa's pet pig, the villagers began to wonder just what was in store for them.

Handbook of Statistics in Clinical Oncology, Third Edition John Crowley, Antje Hoering, 2012-03-26 Many new challenges have arisen in the area of oncology clinical trials. New cancer therapies are often based on cytostatic or targeted agents, which pose new challenges in the design and analysis of all phases of trials. The literature on adaptive trial designs and early stopping has been exploding. Inclusion of high-dimensional data and imaging techniques have become common practice, and statistical methods on how to analyse such data have been refined in this area. A compilation of statistical topics relevant to these new advances in cancer research, this third edition of *Handbook of Statistics in Clinical Oncology* focuses on the design and analysis of oncology clinical trials and translational research. Addressing the many challenges that have arisen since the publication of its predecessor, this third edition covers the newest developments involved in the design and analysis of cancer clinical trials, incorporating updates to all four parts: Phase I trials: Updated recommendations regarding the standard 3 + 3 and continual reassessment approaches, along with new chapters on phase 0 trials and phase I

trial design for targeted agents. Phase II trials: Updates to current experience in single-arm and randomized phase II trial designs. New chapters include phase II designs with multiple strata and phase II/III designs. Phase III trials: Many new chapters include interim analyses and early stopping considerations, phase III trial designs for targeted agents and for testing the ability of markers, adaptive trial designs, cure rate survival models, statistical methods of imaging, as well as a thorough review of software for the design and analysis of clinical trials. Exploratory and high-dimensional data analyses: All chapters in this part have been thoroughly updated since the last edition. New chapters address methods for analyzing SNP data and for developing a score based on gene expression data. In addition, chapters on risk calculators and forensic bioinformatics have been added. Accessible to statisticians and oncologists interested in clinical trial methodology, the book is a single-source collection of up-to-date statistical approaches to research in clinical oncology.

Saving a Million Species Lee Hannah, 2012-06-22 The research paper Extinction Risk from Climate Change published in the journal Nature in January 2004 created front-page headlines around the world. The notion that climate change could drive more than a million species to extinction captured both the popular imagination and the attention of policy-makers, and provoked an unprecedented round of scientific critique. Saving a Million Species reconsiders the central question of that paper: How many species may perish as a result of climate change and associated threats? Leaders from a range of disciplines synthesize the literature, refine the original estimates, and elaborate the conservation and policy implications. The book: examines the initial extinction risk estimates of the original paper, subsequent critiques, and the media and policy impact of this unique study presents evidence of extinctions from climate change from different time frames in the past explores extinctions documented in the contemporary record sets forth new risk estimates for future climate change considers the conservation and policy implications of the estimates. Saving a Million Species offers a clear explanation of the

science behind the headline-grabbing estimates for conservationists, researchers, teachers, students, and policy-makers. It is a critical resource for helping those working to conserve biodiversity take on the rapidly advancing and evolving global stressor of climate change-the most important issue in conservation biology today, and the one for which we are least prepared.
