Social Skills Teaching for Individuals with Autism Keith C Radley,Evan H. Dart,2021-12-14 This book examines current trends and practices in social skills instruction for individuals with autism spectrum disorder (ASD), focusing on empirical support of current practices and for which populations such practices have been most frequently evaluated (e.g., ages, levels of functioning). It details key practices that may be implemented as social skills teaching strategies as well as the theoretical underpinnings of the teaching strategies, relevant empirical support, and a guide to utilization supported by the empirical evaluations. These guides to utilization are a practical tool for implementation of commonly evaluated social skills teaching strategies. In addition, the book describes limitations of social skills teaching and offers recommendations for future research and intervention strategies that may overcome its current limitations. Key topics featured include: Video modeling and social skills training for individuals with ASD. Behavioral skills training for ASD. Peer-mediated teaching of persons with autism. Social narratives of individuals with ASD. Social Skills Teaching for Individuals with Autism is a must-have resource for researchers, professors, and graduate students as well as clinicians, therapists, and other professionals in clinical child and school psychology, behavioral therapy/rehabilitation, social work, public health, and all interrelated disciplines.

Social Skills Training Jed Baker,2023-08-01 Social Skills Training is the complete package: whether learning how long to look at somebody; how to shift topics, despite a desire to stick with that all-consuming special interest; how to say no to peer pressure; or dealing with sensitive topics—it's all here. The PEERS Curriculum for School-Based Professionals Elizabeth A. Laugeson, 2013-10-23 The PEERS® Curriculum for School-Based Professionals brings UCLA's highly acclaimed and widely popular PEERS program into the school setting. This sixteen-week program, clinically proven to significantly improve social skills and social interactions among teens with autism spectrum disorder, is now customized for the needs of psychologists, counselors, speech pathologists, administrators, and teachers. The manual is broken down into clearly divided lesson plans, each of which have concrete rules and steps, corresponding homework assignments, plans for review, and unique, fun activities to ensure that teens are comfortable incorporating what they've learned. The curriculum also includes parent handouts, tips for preparing for each lesson, strategies for overcoming potential pitfalls, and the research underlying this transformative program.

Handbook of Social Skills and Autism Spectrum Disorder Justin B. Leaf, 2017-10-17 This handbook identifies the various social deficiencies widely associated with children and youth diagnosed with autism spectrum disorder (ASD). It discusses possible causes as well as the lifelong effects if these deficiencies are not addressed. The handbook presents current behavioral and curriculum-based methods for assessing social deficits. Chapters examine the various interventions that have been used to improve social skills and behavior, including video modeling, peer-mediated interventions, and script fading. Chapters also assess various interventions using empirically based procedures, evaluate the research of each of these procedures, provide guidelines for treatment planning, and offer clinical recommendations. The handbook concludes with future directions for the development of both social behavior and clinical social skills interventions. Topics featured in the Handbook include: Impairments in social behavior that may result in negative outcomes such as depression, loneliness, and suicide in individuals with ASD. Bullying among youth with ASD. Behavioral skills training to promote social behavior of individuals with ASD. The Early Start Denver Model approach to helping young children with ASD. The implementation of social skills groups for individuals diagnosed with ASD. The Handbook of Social Skills and Autism Spectrum Disorder is a must-have resource for researchers, clinicians/professionals, and graduate students in clinical child, school, and developmental psychology, behavioral therapy, and social work, as well as such interrelated disciplines as child and adolescent psychiatry, rehabilitation medicine/therapy, pediatrics, and special education/educational psychology.

Social Skills Instruction for Students with Autism Spectrum Disorders Tiffany Lynn Born, 2015 Although there is a push to include students with autism spectrum disorders in the general academic context, students with autism are often not

fully included in the social environment of schools. Even when students with autism are in the same settings as their typically developing peers, they often have few social interactions with their peers (e.g., Carter, Hughes, Guth, & Copeland, 2005). One reason for the dearth of social interactions that students with autism have during the school day may be related to deficits in social skills which can interfere with interactions with peers. Peer networks, a type of peer-mediated intervention, have been shown to be effective in increasing the social contacts and relationships of students with disabilities. In peer networks, gains in social interactions are accomplished by providing training to general education peers who compromise a social network for the student with a disability (SWD) outside of the classroom setting. However, the literature on peer networks varies as to if specific social skills training for the SWD is included and often does not fully examine specific or even general social skills deficits of the SWD. This study examined the effectiveness of a peer network plus intervention which incorporated an explicit social skills training component within a peer network framework. Four participants with an educational diagnosis of autism participated in a 10 week peer network intervention. A social skills training component was added to the peer network systematically. The purpose of this study was to examine the effectiveness of the peer network plus intervention for (a) enhancing targeted social skills of the students with autism, (b) enhancing broader social skills as measured by multiple social skill and adaptive questionnaires, and (c) increasing the number of social contacts, friendships, and interactions students with autism have in high schools. In addition, the social validity of this intervention was measured in order to determine the feasibility and acceptability for use in schools and by school personnel. Finally, the study examined the sensitivity of the Autism Social Skills Profile (ASSP, Bellini & Hopf, 2007) for use as a progress monitoring tool with these interventions. Using a multiple baseline across participants design, this study demonstrated that the social skills component of the peer network plus intervention was effective at improving the targeted social skills of all four participants. Two independent coders found Strong Overall Evidence for improvements in social skills when the social skills component was added for each participant. There was Moderate Overall Evidence for the impact of the social skills training component on the number of interactions students with autism had with their peers during the network meetings. Students with autism, peers without disabilities, and school staff interventionists all rated the intervention favorably. The ASSP was not consistently sensitive enough to detect improvements in social skills for all participants. Implications of the study, as well as limitations and directions for future research, are discussed.

Social Skills for Teenagers with Developmental and Autism Spectrum Disorders Elizabeth A. Laugeson, Fred Frankel, 2011-01-19 This book is essential reading for any clinician or researcher working with teens with autism spectrum disorders. This parent-assisted intervention for teens is based on a comprehensive, evidence-based, 14-week program at UCLA's Semel Institute for Neuroscience and Human Behavior, the manualization of the popular UCLA PEERS Program, and the success of the Children's Friendship Training (Routledge, 2002) manual for children. After reviewing techniques

designed to help parents and therapists tailor the manual to the needs of the teens with whom they are working, the text moves on to the individual treatment sessions and strategies for tackling issues such as developing conversational skills, choosing friends, using humor, get-togethers, teasing, bullying, gossiping, and handling disagreements. Each session chapter includes handouts, homework assignments, descriptions of what to expect (and how to handle challenges in delivering the intervention), and customized tips for both parents and therapists.

Play and Social Skills for Children with Autism Spectrum Disorder Marjorie H. Charlop, Russell Lang, Mandy Rispoli, 2018-03-06 This book discusses the deficits in the development and presentation of play behavior and social skills that are considered central characteristics of autism spectrum disorder (ASD). The book explains why play provides an important context for social interactions and how its absence can further exacerbate social deficits over time. It highlights the critical roles of social skills in development, and the social, cognitive, communication, and motor components of play. Chapters offer conceptually and empirically sound play and social skills interventions for children with ASD. Play activities using diverse materials and including interactions with peers and parents are designed to promote positive, effective social behaviors and encourage continued development. The book provides unique strategies that can be tailored to fit individual children's strengths and deficits. Topics featured in this book include: Naturalistic Teaching Strategies (NaTS) for developing play and social skills. Teaching play and social skills with video modeling. Peer-mediated intervention (PMI) strategies that promote positive social interactions between children with ASD and their peers. Visual Activity Schedules and Scripts. Parent-implemented play and social skills intervention. *Play and Social Skills for Children with Autism Spectrum Disorder* is a must-have resource for researchers, clinicians, and graduate students in clinical child and school psychology, behavioral therapy/rehabilitation, social work, public health, and related psychology, education, and behavioral health fields.

Problems Jed E. Baker, Brenda Smith Myles, 2003-01-01 Finally a social skills program that covers all the bases! In this comprehensive and user friendly book, the author translates years of experience working with students with Asperger Syndrome and social-communication difficulties. After brief introductory chapters on skills to target, instructional strategies, behavior management, promoting generalization, etc., as well as a special chapter by Brenda Smith Myles on relevant characteristics of autism spectrum disorders, the reader is presented with the essence of this must-have resource: 70 of the skills that most commonly cause difficulty for individuals with autism spectrum disorders and social-communications problems. The presentation of each skill consists of a reproducible skill handout, as well as activity sheets listing ways teachers and parents can demonstrate, practice, and reinforce the skill in the classroom and at home. A

concluding chapter on promoting peer acceptance offers sensitivity training programs for both students of various age groups and school staff, making this a complete social skills training package for students of all ages.

Practical Social Skills for Autism Spectrum Disorders Kathleen Koenig, 2012-03-06 Building a child's social repertoire for more effective autism treatment.

Social Skills Training in Schools for Children with Autism Spectrum Disorders, 2015 Social interaction skills are a core area of deficit for individuals with an autism spectrum disorder (ASD) and often limit the opportunities these individuals have to develop meaningful friendships. School is an ideal setting to address these challenges, as there are many peers available to practice social interaction skills. However, without support, students with an ASD often do not interact with their peers. Therefore, social skills support in schools is important to address the social development of children with ASD. At this time, though, there is a limited amount of support for interventions to address the social challenges of children with ASD in school settings. Currently, it is recommended that social skills interventions be provided in natural settings at school rather than analog settings. However, it is uncertain if natural environment interventions are considered more effective because of the setting they are provided in or the intervention procedures used in these settings. The current study evaluated a social skills intervention using evidence-based naturalistic teaching procedures provided in an analog setting (i.e., special education classroom). Five students with ASD in kindergarten through 2nd grade were identified to participate in this research study. The intervention was implemented daily by special education staff members (two special education teachers and two special education assistants) who received training and ongoing consultation. Additionally, fidelity of implementation of the intervention was measured throughout the study and the social validity of the intervention was measured prior to and following the implementation of the intervention. Results of this study indicate that the intervention was implemented with high fidelity for all five participants (range: 97-100%) and participants showed significant increases in the percent of time they were engaged in social play and/or conversation with peers following the introduction of the intervention ($p = .0026$). Findings based on visual analysis provide support that naturalistic interventions conducted in an analog setting can produce significant increases in the social behaviors of students; however, these changes did not generalize to natural settings. Social validity data from this study indicates that educators and students who participated in the intervention found the intervention goals to be socially important, the intervention procedures to be feasible and acceptable, and the intervention to be effective.
