Principles and Treatment of Lipoprotein Disorders Gotthard Schettler, Andreas J.R. Habenicht, 2012-12-06 Major advances have been made in the understanding of the molecular mechanisms of atherosclerosis, the disease that still affects more than 50 percent of the population in the highly industrialized countries. This volume covers the most recent advances in the treatment of hyperlipidemia. It represents a necessary update because molecular mechanisms of atherogenesis have been discovered in the past few years and their molecular mechanisms of action identified. Extensively treated are the molecular mechanisms of disease etiology of arteriosclerosis in relation to the major risk factor hyperlipidemia, rationale for more effective treatment of this disease by dietary means, the treatment of associated or causing diseases, and the treatment using hypolipidemic drugs.

This fully updated and expanded guide gives providers the information they need to guide patients and provide them with evidence-based advice on supplement use. Inside readers will find detailed research summaries of 38 common botanical and nonbotanical supplements, including honey, probiotics, turmeric, zinc, and many more. Each product chapter includes information on chemical constituents, theorized mechanism of action, adverse effects, drug interactions, and a summary of clinical studies. Stay informed and be prepared to help patients make wise choices and improve their diabetes self-management. -- American Diabetes Association

The Hepatocyte Review M. N. Berry,Anthony M. Edwards,2013-06-29 It is thirty years since the technique of high-yield preparation of isolated hepatocytes, by collagenase perfusion of the liver, was published. The original method described by Berry and Friend has undergone many minor modifications by other workers, and the two-step procedure introduced by Seglen in 1976 has become the most frequent way to prepare hepatocyte suspensions. An important development introduced by Bissell in 1973 was the use of the cells as the first step in monolayer culture. The availability of the isolated hepatocyte preparation as cells in suspension or culture has undoubtedly facilitated research on the liver. This was emphasised in our book, published (with Dr. Greg Barritt) in 1990, which described in detail methods of preparation and the properties of the isolated hepatocytes. It also discussed the usefulness of the preparation for the study of intermediary and xenobiotic metabolism, calcium ion transport, and the growth and differentiation of hepatocytes in culture. The book also touched briefly on a range of specialised techniques, including peri fusion, subcellular fractionation, transplantation, cryopreservation and measurement of intracellular pH. Although standard procedures for the manipulation of hepatocytes have not changed a great deal in ten years, they have undoubtedly been refined. This applies particularly to hepatocyte culture techniques, cryopreservation, and even to preparation of hepatocyte suspensions, where it is now feasible to use purified enzymes. There is also much more emphasis on the use and study of human hepatocytes, particularly in the field of pharmacology and therapeutics.

Clinical Pharmacology in the Elderly Hans-Peter Breuel,2012-12-06 The appropriate and rational use of drugs by the elderly is a matter of growing medical and social concern. Persons aged 65 years and older constitute about 12%-15% of the population in the Western world, and the total number of the elderly will increase significantly in the coming years. This population accounts for 30% of all the prescription drugs used. Aging, specifically the transition from middle to old age, is a complex process. From the perspective of clinical pharmacology, these pathophysiological changes may reasonably be

expected to alter responsiveness to drugs. The age-related differences in response to drugs can arise from alterations in pharmacokinetics or pharmacodynamics. This makes it mandatory that clinical pharmacological studies be carried out in the elderly during extended phase I studies. The older the population likely to use the drug, the more important it is to include the very old. It is also important not to exclude ... : "necessarily patients with concomitant illnesses; it is only by observing, such patients that drug-disease interactions can be detected. Reports from surveillance systems have greatly increased our awareness of problems associated with drug therapy in old age.
