## Alexandre André Victor Sarrazin de Montferrier

**André-Louis Cholesky** Claude Brezinski,Dominique Tournès,2014-08-06 This book traces the life of Cholesky (1875-1918), and gives his family history. After an introduction to topography, an English translation of an unpublished paper by him where he explained his method for linear systems is given, studied and replaced in its historical context. His other works, including two books, are also described as well as his involvement in teaching at a superior school by correspondence. The story of this school and its founder, Léon Eyrolles, are addressed. Then, an important unpublished book of Cholesky on graphical calculation is analyzed in detail and compared to similar contemporary publications. The biography of Ernest Benoit, who wrote the first paper where Cholesky's method is explained, is provided. Various documents, highlighting the life and the personality of Cholesky, end the book.

**Progress in Aeronautical Sciences** D. Küchemann,L. H. G. Sterne,2016-07-04 Progress in Aeronautical Sciences, Volume 5, contains six articles that belong to the field of aerodynamics. This accords well with one of the declared purposes of this series, to serve the general reader with accounts of those parts of the subject remote from his specialized interest, not

only because his field of specialization is likely to change during his career but also because we are all students of one science. The first paper gives a comprehensive survey of low-speed wind-tunnels, those early tools of the aerodynamicist which seem likely to retain their importance indefinitely. The second deals with a basic feature of the separation of a laminar boundary layer from a wall in two-dimensional flow: the bubble. The third reports on the more theoretical aspects of the IUTAM Symposium Transsonicum, which afforded a reunion of almost everyone who at one time or another had contributed to our knowledge of flows of mixed type. The fourth paper is concerned with a particular aspect of the theory of transonic flows and gives an exhaustive survey of this work. The fifth paper reports on a symposium devoted to rarefied gas dynamics. The final paper presents corrections to an article on the theory of sonic bangs, published in Volume 1 of this series.

Peace, Security and Post-conflict Reconstruction in the Great Lakes Region of Africa Tukumbi Lumumba-

Kasongo,2017-11-27 The Great Lakes region of Africa is characterized by protest politics, partial democratization, political illegitimacy and unstable economic growth. Many of the countries that are members of the International Conference on the Great Lakes Region (ICGLR) which are: Burundi, Angola, Central African Republic, Democratic Republic of the Congo, Republic of the Congo, Kenya, Uganda, Rwanda, Sudan, South Sudan, Tanzania, and Zambia, have experienced political violence and bloodshed at one time or another. While a few states have been advancing electoral democracy, environmental protection and peaceful state building, the overall intensity of violence in the region has led to civil wars, invasion, genocide, dictatorships, political instability, and underdevelopment. Efforts to establish sustainable peace, meaningful socio-economic development and participatory democracy have not been quite successful. Using various methodologies and paradigms, this book interrogates the complexity of the causes of these conflicts; and examines their impact and implications for socio-economic development of the region. The non-consensual actions related to these conflicts and imperatives of power struggles supported by the agents of savage capitalism have paralysed efforts toward progress. The book therefore recommends new policy frameworks within regionalist lenses and neo-realist politics to bring about sustainable peace in the region.
