Deep Analysis Charles Berg, 2021-12-26 First published in 1947, with a second edition in 1950, the original blurb reads: 'This is an illuminating description of a complete Freudian analysis of a single case. From the first interview to the last the reader's attention is engrossed with the almost-normal personality of the individual who is being analysed. We see his thoughts, philosophy, and emotions gradually unfolding under the application of analytical technique (lightly explained in the second chapter), until - and this is where the book is such a tremendous advance upon the psychological novel - the very springs and mechanisms of his psychic pattern and emotional structure are abundantly and lucidly revealed. We see and understand the hidden depths of the nature of the human mind, and obtain introductory insight not only into normal mental functioning, but into almost all its psychopathic aberrations including frigidity, impotence, love, hate, hysteria, obsessions, and even paranoia and schizophrenia - all in minor degrees an integral part of normality. In spite of this the book is light reading and, though particularly instructive to doctor and professional psychologist, understandable to the average intelligent layman.' This book is a re-issue originally published in 1950. The language used is a reflection of its era and no offence is meant by the Publishers to any reader by this re-publication.

How Does Analysis Cure? Fred Busch,2024-08-13 Building upon 50 years of clinical experience, Fred Busch addresses a central question facing all psychoanalysts: What is essential to a psychoanalytic curative process, and what are the methods of working that can bring this about? This book investigates the analytic relationship as a process of giving patients the freedom to think the unthinkable (to build representations) and change repeated patterns of action into the possibility of reflection. This entails careful examination of central psychoanalytic concepts such as transference, resistances, and the ethics of countertransference as a guide to a patient's unconscious, in addition to newer ideas, such as the notion of the analyst as a memory keeper of patients' lost objects. In its final part, the book presents observations on how analysts function as part of analytic organizations, and the various roles they take on to develop an "analytic identity". Continuing decades of significant theoretical work on clinical concepts, this book offers a unique perspective on how psychoanalysts and psychotherapists can work effectively to achieve the best possible outcomes for their patients.

Stevens Arroyo,2006 In his new Introduction to this edition, Stevens-Arroyo analyzes significant new research, provides a guide to the important scientific findings of mitochondrial DNA among contemporary Caribbean peoples, offers additional evidence supporting his original argument that the Tainos were not exterminated in the 16th century, and initiates discussion of still unresolved issues. This edition of Cave of the Jagua considers Neo-Taino movements, explores the meanings of Taino spirituality, and emphasizes the significance of that message to the contemporary world.--Jacket.

Being of Two Minds Arnold I. Goldberg, 2013-06-17 From the unfaithful husband to the binge eater, from the secret cross-dresser to the pilferer of worthless items, there are those who seem to live two lives, to be divided selves, to be literally of two minds. This division or vertical split appears in a person at odds with himself, a person who puzzles over, and even heartily dislikes, that parallel person who behaves in so repugnant a manner. In *Being of Two Minds*, Arnold Goldberg provides trenchant insight into such divided minds - their origins, their appearances, and their treatment. Goldberg's inquiry into divided minds leads to a return to the psychoanalytic concept of disavowal, which forms the basis of the vertical split. Goldberg explores the developmental circumstances that tend to a reliance on disavowal, provides numerous examples of the emergence of disavowal in the treatment situation, and considers the therapeutic approaches through which disavowal may be addressed. He is especially perceptive in discussing the manner in which the therapist's own tendency to disavow may collusively interact with that of the patient. Goldberg considers the full range of splits to which disavowal gives rise, from circumscribed instances of dissociation to the much-debated multiple personality disorders. He gives special attention to the role of the vertical split in patients with behavior disorders; here his thoughtful insights point to a treatment approach that significantly differs both from the simple ascription of a 'self disorder' and from the usual pedagogical emphasis on issues of self-control and/or punishment. As Goldberg shows, the repugnance felt by many therapists for offensive behaviors emanating from the patient's parallel self are frequently shared by the patient, who commonly despises misbehavior that he is unable to understand. *Being of Two Minds* begins to formulate just such understanding, to the great benefit of patient and therapist alike.
