The behaviours examined are of relevance to all ranks and roles, from a newly appointed police constable to an executive officer. Behavioural soft skills are essential to effective policing practice and professional development, and are particularly significant in leadership and management roles. This handbook examines the key leadership behaviours and focuses on discreet aspects within policing as well as describing a career timeline. In addition it provides a unique opportunity for leaders to articulate the effects the Covid-19 pandemic has had on law enforcement, examining the impact on policing behaviours and what the blockages are. Each chapter is written by a well-established serving police leader or policing scholar, bringing together a wealth of experience and understanding and applying this knowledge in context through key case studies and examples. It bridges the gap between theory and practice so readers can apply what they have learnt to their policing roles and effectively formulate and describe their own leadership philosophy and style. Introduction to Data Science Rafael A. Irizarry, 2024-08-02 Unlike the first edition, the new edition has been split into two books. Thoroughly revised and updated, this is the first book of the second edition of *Introduction to Data Science: Data Wrangling and Visualization with R*. It introduces skills that can help you tackle real-world data analysis challenges. These include R programming, data wrangling with dplyr, data visualization with ggplot2, file organization with UNIX/Linux shell, version control with Git and GitHub, and reproducible document preparation with Quarto and knitr. The new edition includes additional material/chapters on data.table, locales, and accessing data through APIs. The book is divided into four parts: R, Data Visualization, Data Wrangling, and Productivity Tools. Each part has several chapters meant to be presented as one lecture and includes dozens of exercises. The second book will cover topics including probability, statistics and prediction algorithms with R. Throughout the book, we use motivating case studies. In each case study, we try to realistically mimic a data scientist's experience. For each of the skills covered, we start by asking specific questions and answer these through data analysis. Examples of the case studies included in the book are: US murder rates by state, self-reported student heights, trends in world health and economics, and the impact of vaccines on infectious disease rates. This book is meant to be a textbook for a first course in Data Science. No previous knowledge of R is necessary, although some experience with programming may be helpful. To be a successful data analyst implementing these skills covered in this book requires understanding advanced statistical concepts, such as those covered the second book. If you read and understand all the chapters and complete all the exercises in this book, and understand statistical concepts, you will be well-positioned to

perform basic data analysis tasks and you will be prepared to learn the more advanced concepts and skills needed to become an expert.
