Good to Great Jim Collins, 2001-10-16 The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the very beginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?

Summary of Good to Great Alexander Cooper, 2021-02-15 Summary of *Good to Great* Jim Collins's *Good to Great* examines companies that have not only endured over time, but who managed the transition from being good companies to becoming outstanding performers. The eleven companies found to have taken this leap managed to outperform the stock market 6.9 times over fifteen years. The author set out to understand what distinguished great organizations from a carefully selected group of companies that did not make the grade. The research team came up with some unexpected outcomes. At the time of the transition from Good to Great all eleven companies were being led by Level 5 Leaders. These people showed a unique combination of humility and professional will. They were prepared to do anything necessary for the benefit of the organization. Level 5 Leaders started out, not by plotting the direction of the company, but by ensuring that they had all the right people in the right positions. Then they confronted the brutal facts of their organization, and used this knowledge to ensure that they chose the right direction for the firm. Knowing what the organization should be doing—and equally importantly what it should not be doing—they stuck stubbornly to the plan even when they were in dire circumstances. The culture of discipline within the organization ensured that the path to excellence would eventually be met. Patience, endurance and discipline, doggedly sticking only to what the company did best, resulted in outstanding results. This investigation of what distinguished the great from the mediocre is an excellent study of what is needed to build great organizations. That good is the enemy of great is not just a business problem, he writes. It is a human problem(16). As such, the question naturally arises: Can a good enough government, company, organization, or person become a great one? If so, is there a discrete methodology that might consistently yield a transformation from good to great? Or is the disease of 'just being good' incurable?(5). To answer this question, Collins and his team executed a massive research project (spanning five years and totaling a combined 15,000 hours of research for its twenty-one-person team). Rather than beginning with a hypothesis and drilling down for confirmation or falsification, Collins and his team started by collecting, coding, and analyzing raw data and existing writing and research. From there they worked their way up to a set of core practices among organizations that move from good to great, ultimately working up a linear roadmap any organization can follow to make such a transformation.
