**Managing Networks of Creativity** Fiorenza Belussi, UDO HERMANN STABER, 2012-02-27 The aim of the Managing Networks of Creativity is to improve our understanding of creativity and the management of creativity, as discussed in the fields of management (including strategic management, organization science, organizational behaviour, and entrepreneurship), economics, sociology, regional studies, and political science. While research on creativity has made several important contributions to the theoretical literature, little attention has been paid to the development and testing of formal theoretical models, especially in those cases where creativity is the result not so much of individual behaviour than the outcome of collective efforts, connecting individuals in organizations, social networks, projects, geographic clusters, and so forth. The proposed volume includes studies, both conceptual and empirical, which, as a whole, deconstruct the concept of creativity and the management of creativity by identifying specific situations, contexts, firms, clusters, and districts in which creative processes evolve. The reader is provided with in-depth discussions of theoretical issues and a range of descriptive cases and survey data that the authors use to explore or test concepts and models. Overall, the volume aims to integrate current debates concerning the role of creativity (and innovation) in economic and social development.

**Social Exclusion** Giuliana Parodi, Dario Sciulli, 2011-09-24 The book provides a panoramic approach to social exclusion, with emphasis on structural causes (education, health, accidents) and on short term causes connected with the crisis which started in 2008. The picture emerging, based on econometric analysis, is that the crisis has widened the risk of social exclusion, from the structural groups, like disabled people and formerly convicted people, to other groups, like the young, unemployed, low skilled workers and immigrants, in terms of income, poverty, health, unemployment, transition between occupational statuses, participation, leading to a widening of socio-economic duality. It has also been stressed the relevance of definitions of socio-economic outcomes for the evaluation of the crisis, and their consequences to define interventions to fight socio-economic effects of the economic downturn. The adequacy of welfare policies to cope with social exclusion, especially during a crisis, has been called into question.

**Advances in Design Engineering** Francisco Cavas-Martínez, Félix Sanz-Adan, Paz Morer Camo, Ruben Lostado

Lorza,Jacinto Santamaría Peña,2020-03-09 This book gathers the papers presented at the XXIX International Congress INGEGRAF “The digital transformation in graphic engineering,” which was held in Logroño, Spain on June 20–21, 2019. It reports on cutting-edge topics in product design and manufacturing, such as industrial methods for integrated product and process design; innovative design; and computer-aided design. Further topics covered include virtual simulation and reverse engineering; additive manufacturing; product manufacturing; engineering methods in medicine and education; representation techniques; and design and modeling for nautical, engineering and construction, aeronautics and aerospace contexts. The book is divided into six main sections, reflecting the focus and primary themes of the conference. The contributions presented here will not only provide researchers, engineers and experts in a range of industrial engineering subfields with extensive information to support them in their daily work, but will also stimulate new research directions, advanced applications of the methods discussed, and future interdisciplinary collaborations.

**Classification, (Big) Data Analysis and Statistical Learning** Francesco Mola,Claudio Conversano,Maurizio Vichi,2018-02-21 This edited book focuses on the latest developments in classification, statistical learning, data analysis and related areas of data science, including statistical analysis of large datasets, big data analytics, time series clustering, integration of data from different sources, as well as social networks. It covers both methodological aspects as well as applications to a wide range of areas such as economics, marketing, education, social sciences, medicine, environmental sciences and the pharmaceutical industry. In addition, it describes the basic features of the software behind the data analysis results, and provides links to the corresponding codes and data sets where necessary. This book is intended for researchers and practitioners who are interested in the latest developments and applications in the field. The peer-reviewed contributions were presented at the 10th Scientific Meeting of the Classification and Data Analysis Group (CLADAG) of the Italian Statistical Society, held in Santa Margherita di Pula (Cagliari), Italy, October 8–10, 2015.

**Human Friendly Robotics** Fanny Ficuciello,Fabio Ruggiero,Alberto Finzi,2018-06-01 The International Workshop on Human-Friendly Robotics (HFR) is an annual meeting that brings together academic scientists, researchers and research scholars to exchange and share their experiences and research results on all aspects related to the introduction of robots into everyday life. HFR collects contributions on current developments of a new generation of human-friendly robots, i.e., safe and dependable machines, operating in the close vicinity to humans or directly interacting with them in a wide range of domains. The papers contained in the book describe the newest and most original achievements in the field of human-robot-interaction coming from the work and ideas of young researchers. The contributions cover a wide range of topics related to human-robot interaction, both physical and cognitive, including theories, methodologies, technologies, empirical and experimental studies.

Disadvantaged Workers Miguel Ángel Malo,Dario Sciulli,2014-03-26 This book includes empirical contributions focusing

on disadvantaged workers. According to the European Commission's definition, disadvantaged workers include categories of workers with difficulties entering the labour market without assistance and hence, requiring the application of public measures aimed at improving their employment opportunities. In addition to the labour market perspective, this is also relevant in terms of social cohesion, which is one of the central objectives of the European Union and of its Member States. This work deals with the most relevant groups of disadvantaged workers, namely disabled workers, young workers, women living in depressed areas, migrants in the labour market and the long-term unemployed, and analyses the situation in the Italian, Spanish and some African labour markets. The determinants of disadvantage in the labour market are investigated, highlighting both the role of supply variables, including structural factors and the weakness on the demand side, the role of the economic crisis and the ineffectiveness of some labour policies. A complex framework emerges in which disadvantaged groups may share common problems, both in terms of integration into the labour market and in terms of working conditions, but often require group-specific policies, taking into account their intergroup heterogeneity.

**Mechcomp3** Antonio J.M. Ferreira, Erasmo Viola, Francesco Tornabene, Nicholas Fantuzzi, 2017-05-25 The use of composite materials has grown exponentially in the last decades and has affected many engineering fields due to their enhanced mechanical properties and improved features with respect to conventional materials. For instance, they are employed in civil engineering (seismic isolators, long-span bridges, vaults), mechanical engineering (turbines, machine components), aerospace and naval engineering (fuselages, boat hulls and sails), automotive engineering (car bodies, tires), and biomechanical engineering (prostheses). Nevertheless, the greater use of composites requires a rapid progress in gaining the needed knowledge to design and manufacture composite structures. Thus, researchers and designers devote their own efforts to develop new analysis techniques, design methodologies, manufacturing procedures, micromechanics approaches, theoretical models, and numerical methods. For these purpose, it is extremely easy to find many recent journal papers, books, and technical notes, focused on the mechanics of composites. In particular, several studies are presented to take advantage of their superior features by varying some typical structural parameters (such as geometry, fiber orientations, volume fraction, structural stiffness, weight, lamination scheme). Therefore, this Conference aims to collect contributions from every part of the globe that can increase the knowledge of composite materials and their applications, by engaging researches and professional engineers and designers from different sectors. The same aims and scopes have been reached by the previous editions of Mechanics of Composites International Conferences (MECHCOMP), which occurred in 2014 at Stony Brook University (USA) and in 2016 at University of Porto (Portugal).

Dislessia in età adulta Enrico Ghidoni, Giacomo Guaraldi, 2013-06-12 Questo volume raccoglie esperienze e saggi sul trattamento della dislessia in età adulta (all'Università e nel mondo del lavoro). Dopo un capitolo sulle nuove norme introdotte nel mondo universitario con la Legge n. 17 del 2010, gli autori riportano una serie di testimonianze raccontate in

prima persona da universitari, laureati e adulti inseriti nel mondo del lavoro, accomunati da un disturbo specifico di apprendimento. Il volume raccoglie poi alcuni contributi di studiosi di fama internazionale (Cesare Cornoldi, Denny Menghini, Ciro Ruggerini, Andrea Biancardi, Enrico Ghidoni) e una parte dedicata alle tecnologie compensative.

**The Bishop's Palace** Maureen C. Miller, 2018-09-05 This lavishly illustrated book looks at the art and architecture of episcopal palaces as expressions of power and ideology. Tracing the history of the bishop's residence in the urban centers of northern Italy over the Middle Ages, Maureen C. Miller asks why this once rudimentary and highly fortified structure called a domus became a complex and elegant palace (palatium) by the late twelfth century. Miller argues that the change reflects both the emergence of a distinct clerical culture and the attempts of bishops to maintain authority in public life. She relates both to the Gregorian reform movement, which set new standards for clerical deportment and at the same time undercut episcopal claims to secular power. As bishops lost temporal authority in their cities to emerging communal governments, they compensated architecturally and competed with the communes for visual and spatial dominance in the urban center. This rivalry left indelible marks on the layout and character of Italian cities. Moreover, Miller contends, this struggle for power had highly significant, but mixed, results for western Christianity. On the one hand, as bishops lost direct governing authority in their cities, they devised ways to retain status, influence, and power through cultural practices. This response to loss was highly creative. On the other hand, their loss of secular control led bishops to emphasize their spiritual powers and to use them to obtain temporal ends. The coercive use of spiritual authority contributed to the emergence of a persecuting society in the central Middle Ages.

*Complexity Perspectives in Innovation and Social Change* David Lane, Denise Pumain, Sander Ernst van der Leeuw, Geoffrey West, 2009-02-13 Innovation is nowadays a question of life and death for many of the economies of the western world. Yet, due to our generally reductionist scientific paradigm, invention and innovation are rarely studied scientifically. Most work prefers to study its context and its consequences. As a result, we are as a society, lacking the scientific tools to understand, improve or otherwise impact on the processes of invention and innovation. This book delves deeply into that topic, taking the position that the complex systems approach, with its emphasis on 'emergence', is better suited than our traditional approach to the phenomenon. In a collection of very coherent papers, which are the result of an EU-funded four year international research team's effort, it addresses various aspects of the topic from different disciplinary angles. One of the main emphases is the need, in the social sciences, to move away from neo-darwinist 'population thinking' to 'organization thinking' if we want to understand social evolution. Another main emphasis is on developing a generative approach to invention and innovation, looking in detail at the contexts within which invention and innovation occur, and how these contexts impact on the chances for success or failure. Throughout, the book is infused with interesting new insights, but also presents several well-elaborated case studies that connect the ideas with a substantive body of 'real world'

information.

**Continuity and Discontinuity in Learning Careers** Barbara Merrill, Andrea Galimberti, Adrianna Nizinska, José González-Monteagudo, 2018-09-11 Continuity and Discontinuity in Learning Careers: Potentials for a Learning Space in a Changing World focuses on the continuities and discontinuities of the learning careers and identities of non-traditional adult students in diverse learning contexts.

*Quaderni del CIRM - Centro Interuniversitario di Ricerca sulle Metafore* Micaela Rossi, 2021-12-30 Prodotto del nutrito e variegato gruppo di lavoro che costituisce il Centro Interuniversitario di Ricerca sulle Metafore (<https://cirm.unige.it>), i Quaderni del CIRM ne rispettano pienamente la natura eterogenea per provenienza disciplinare, interessi di ricerca, punto di vista sulla poliedricità dell'oggetto metaforico. In questo primo volume, accanto a saggi più focalizzati su aspetti teorici ed epistemologici, coesistono contributi centrati sui fenomeni che collegano metafora e argomentazione, così come analisi contrastive e traduttologiche e infine studi di caso in diverse tipologie testuali e discorsive. Altrettanto varia e significativa, la provenienza degli autori testimonia della vitalità di un progetto aperto ad approcci teorici e metodologici diversi.

Software Engineering for Multi-Agent Systems II Carlos Lucena, Alessandro Garcia, Alexander Romanovsky, Jaelson Castro, Paulo S.C. Alencar, 2004-02-24 Advances in networking technology have revitalized the investigation of agent technology as a promising paradigm for engineering complex distributed software systems. Agent technology has been applied to a wide range of application - mains, including e-commerce, human-computer interfaces, telecommunications, and software assistants. Multi-agent systems (MASs) and their underlying theories provide a more natural support for ensuring important properties such as autonomy, mobility, environment heterogeneity, organization, openness, and intelligence. As a consequence, agent-based systems are likely to provide new approaches to dealing with the complexity of developing and maintaining modern software. However, developing robust large-scale agent-based systems will require new software engineering approaches. There are currently many methods and techniques for working with individual agents or with systems built using only a few agents. Unfortunately, agent-based software engineering is still in its infancy and existing software engineering approaches are unable to cope with large MASs. The complexity associated with a large MAS is considerable. When a huge number of agents interact over heterogeneous environments, various phenomena occur which are not as easy to capture as when only a few agents are working together. As the multiple software agents are highly collaborative and operate in networked environments, they have to be context-aware and deal with environment uncertainty. This makes their coordination and management more difficult and increases the likelihood of exceptional situations, such as security holes, privacy violations, and unexpected global effects. Moreover, as users and software engineers delegate more autonomy to their MASs, and put more trust in their results, new concerns arise in real-life applications.

*Climate and Hydrology of Mountain Areas* Carmen de Jong, David N. Collins, Roberto Ranzi, 2005-06-17 A comprehensive overview of interaction of the major hydrological and meteorological processes in mountain areas ie Cryosphere and Climatic Change, Snow Melt and Soil Water, Run-off and Floods, Water fluxes and Water Balance, Hydro-meteorological Coupling and Modelling. Each section will review recent research in the field and illustrate key interactions with case studies from mountainous regions in Europe, The Americas and Central Asia.

**Electronic Structure**, 2000-07-19 This book is the second volume in the Handbook of Surface Science series and deals with aspects of the electronic structure of surfaces as investigated by means of the experimental and theoretical methods of physics. The importance of understanding surface phenomena stems from the fact that for many physical and chemical phenomena, the surface plays a key role: in electronic, magnetic, and optical devices, in heterogenous catalysis, in epitaxial growth, and the application of protective coatings, for example. Therefore a better understanding and, ultimately, a predictive description of surface and interface properties is vital for the progress of modern technology. An investigation of surface electronic structure is also central to our understanding of all aspects of surfaces from a fundamental point of view. The chapters presented here review the goals achieved in the field and map out the challenges ahead, both in experiment and theory.
