**'super' object has no attribute '\_\_getattr\_\_' in python3** Mar 5, 2015 · The Python attribute retrieval mechanism works in a way that a class `__getattr__` is called as "last resource" to try to get an attribute for an instance of that class. Your code is right - it fails due to your superclass of "Example" - in this case "object" - not having a `__getattr__` attribute. If you are not at a deep class hierarchy and want to perform custom attribute retrieval ... **What does `super()` mean in `__new__` - Stack Overflow** Jan 30, 2012 · A super object created with `super(T, O)`, then, is a (built-in) object with a `__getattr__` method which is called on every attribute reference on it, and looks up the attribute in the dicts of the only classes following T in O's MRO. **oop - What does 'super' do in Python? - Stack Overflow** Nov 3, 2015 · The one without super hard-codes its parent's method - thus it has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... **What is a difference between `<? super E>` and `<? extends E>`?** Sep 2, 2009 · The first (`<? super E>`) says that it's "some type which is an ancestor (superclass) of E"; the second (`<? extends E>`) says that it's "some type which is a subclass of E". (In both cases E itself is okay.) So the constructor uses the `? extends E` form so it guarantees that when it fetches values from the collection, they will all be E or some subclass (i.e. it's compatible). The ... [python - Using super with a class method - Stack Overflow](#) To reiterate: `super(B, cls).do_your_stuff()` causes A's `do_your_stuff` method to be called with `cls` passed as the first argument. In order for that to work, A's `do_your_stuff` has to be a class method. The linked page doesn't mention that, but that is definitively the case. [python - replace block within `{ { super\(\) } }` - Stack Overflow](#) In the child template, I would like to include everything that was in the head block from the base (by calling `{ { super() } }`) and include some additional things, yet at the same time replace the title block within the super call. [java - how to Call super constructor in Lombok - Stack Overflow](#) Apr 20, 2015 · how to Call super constructor in Lombok Asked 10 years, 4 months ago Modified 1 year, 1 month ago Viewed 339k times [super\(\) in Java - Stack Overflow](#) Sep 22, 2010 · `super()` is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. [How does Python's super\(\) work with multiple inheritance?](#) In fact, multiple inheritance is the only case where `super()` is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. **'super' object has no attribute '\_\_sklearn\_tags\_\_'** Dec 18, 2024 · 'super' object has no attribute

'\_\_sklearn\_tags\_\_'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions.
