The Illustrated History of the Camera from 1839 to the Present Michel Auer,1975

Camera Todd Gustavson,2009 Celebrating the camera and the art of the photograph, created in collaboration with the George Eastman House, spans almost 200 years, from the first faint image ever caught to today's state-of-the-art digital equipment. The includes insightful essays by Steve Sasson (inventor of the digital camera) and Alexis Gerard (visionary founder of Future Image Inc.), tracing the camera's development, the lives of its inventors, and the artists behind the lens. Images of more than 350 cameras from the George Eastman House Collection, plus historic photos, ads, and drawings, complement the text.

The History of Photography Helmut Gernsheim,Alison Gernsheim,1969

A Concise History of Photography Helmut Gernsheim,1986-01-01 Highly acclaimed, scholarly volume examines technological advances and artistic development, with nearly 300 examples of photographic art. 285 black-and-white photos.

The History of Photography as Seen Through the Spira Collection S. F. Spira,Eaton S. Lothrop,Jonathan B. Spira,2001 The founder of Spiratone, a company that once supplied photographic accessories, S.F. (Fred) Spira is also well known for his extensive collection of photographic equipment. This volume, which includes Spira's writings and is coauthored by his son, Jonathan, and Lothrop, a former president of the American Photographic Historical Society, provides a history of photographic processes with a focus on consumer-oriented picture taking. It includes thorough discussions on film and camera history, color photography, photo reproduction, stereo photography, and motion pictures and an especially good chapter on digital photography. Photo illustrations are taken from the more than 20,000 objects in Spira's collection. A

chapter on photography and humor seems out of place, but in general the book supplies understandable explanations of photographic devices and methods and is a good supplement to more general histories, such as Naomi Rosenblum's *A World History of Photography*.

History of Photography in Fifty Cameras, 2014 Photography was invented in 1839 and changed the way the people saw the world around them. The groundbreaking tool that brought the chemistry and optics together to make photography possible was the camera. During the nineteenth century cameras were mainly owned by professionals or self-educated entrepreneurs. As the technology improved, demand grew from ordinary people for affordable cameras. No longer solely the preserve of commercial photographic studios, cameras were now designed to target new markets: children, women, the snapshotter, the amateur and the professional, alongside specialized and scientific applications such as aerial photography, military use and spying. By the 1950s, electrical features such as battery-controlled shutters and exposure processes had become the norm, leading the way for the computer-run functions in the high-spec models of the 1970s. The arrival of commercially viable digital cameras, which recorded an image on a CCD sensor rather than film from the early 1980s, transformed the camera to a fully electronic device. By the mid-2000s digital cameras were outselling film cameras, and in 2012 six times as many smartphone cameras were sold than digital cameras. This book relates the exciting story of this groundbreaking tool by selecting fifty key camera models and investigating them in chronological order. The origin and development of each model is described in detail, along with its impact on the science, consumption and art of photography. This book is an excellent resource for students of the history of photography, curators of photographic equipment and technophile photographers.

Camera Historica Antoine de Baecque, 2012 Antoine de Baecque proposes a new historiography of cinema, investigating how cinematic representation changes the very nature of history.

The History of Photography, from 1839 to the Present Day Beaumont Newhall, 1964 From the back cover: The History of Photography has long been recognized as a classic contribution to the study of the art of photography. Beaumont Newhall has achieved the most sensitive and thorough history of the medium, revealed through the eyes of those photographers who have shaped our vision and the understanding of our society through photography. Using more than two hundred illustrations of works by major photographers such as Hill and Adamson, O'Sullivan, Cameron, Atget, Emerson, Stieglitz, Weston, Adams, Lange, and Evans, the author presents a fascinating, comprehensive study of the significant trends and developments in the medium since the first photographs in 1839.

The History of Photography Beaumont Newhall, 1982 A history of photography that gives many prints representing the best from the past and present.

The Problem with Early Cameras Ryan Nagelhout, 2015-07-15 Early commercial cameras were big, boxy, and you had to

actually give your camera back to the camera maker to develop your photos. Before that, making photographs was actually even more difficult. Complex chemicals and long hours in darkrooms were required to develop even a single shot. Readers take a journey through photography's history, from solutions and glass plates to point-and-shoot cameras. The story is complex and amazing—just the like the cameras we use today.

Art History Through the Camera's Lens Helene E. Roberts, 1995 First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

Hexagon (KH-9) Mapping Camera Program and Evolution Maurice G. Burnett, 2012 The United States developed the Gambit and Hexagon programs to improve the nation's means for peering over the iron curtain that separated western democracies from east European and Asian communist countries. The inability to gain insight into vast denied areas required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964. The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.

On the Camera Arts and Consecutive Matters Hollis Frampton, 2015-01-30 The collected writings of artist and filmmaker Hollis Frampton, including all the essays from the long-unavailable *Circles of Confusion* along with rare additional material. As Hollis Frampton's photographs and celebrated experimental films were testing the boundaries of "the camera arts" in the 1960s and 1970s, his provocative and highly literate writings were attempting to establish an intellectually resonant form of discourse for these critically underexplored fields. It was a time when artists working in diverse disciplines were beginning to pick up cameras and produce films and videotapes, well before these practices were understood or embraced by institutions of contemporary art. This collection of Frampton's writings presents his critical essays (many written for *Artforum* and *October*) along with additional material, including lectures, correspondence, interviews, and production notes and scripts. It replaces—and supersedes—the long-unavailable *Circles of Confusion*, published in 1983. Frampton ranged widely over the visual arts in his writing, and the texts in this collection display his unique approaches to photography, film, and video, as well as the plastic and literary arts. They include critically acclaimed essays on Edward Weston and Eadweard Muybridge as well as appraisals of contemporary photographers; the influential essay, "For a Metahistory of Film," along with scripts, textual material, and scores for his films; writings on video that constitute a prehistory of the digital arts; a dialogue with Carl Andre (his friend and former Phillips Andover classmate) from the early

1960s; and two inventive, almost unclassifiable pieces that are reminiscent of Borges, Joyce, and Beckett.

Stories from the Camera Michele M. Penhall, 2016-03-15 The remarkable photography collection of the University of New Mexico Art Museum owes its unique character and quality to the directors, curators, scholars, and artists who have taught, worked, and studied at the museum and in the university's Department of Art and Art History. In this indispensable book, these distinguished scholars and artists reflect on the pictures from the collection that hold significance to them. Through their own professional and artistic practice, they represent different generations of aesthetic voices and intellectual directions. As one of the earliest collegiate institutions to begin collecting photography, the University of New Mexico Art Museum holds a stunning array of images that span photography's 175-year history. In addition to iconic works by famous photographers, this book also features less familiar but equally masterful pictures. Together, these essays represent a unique history of photography and this renowned museum.
