Whats the difference between NP and co-NP - Stack Overflow Jun 11, 2013 · 21 I know their complete counterparts mean that NP - complete is the hardest in the NP problems and co-NP-complete means the hardest in co-NP problems but whats the difference between the two? My textbook said "The yes and no are ... **P vs. NP and Shor's Algorithm - Stack Overflow** Sep 22, 2022 · The P vs NP question asks whether every problem in NP is also in P. Therefore, if you just find a single problem in NP that is also in P, that does not itself prove that $P = NP$. We already know of many problems with this property - since ... **P vs NP: How to prove that they are not equal? - Stack Overflow** Oct 9, 2019 · The question if $P = NP$ is still unproven. I wonder how you can prove that P is not equal to NP. My thought was that if you find a problem in NP and then prove that there is no algorithm, which can solve the problem in poly time (without witness), then $P \neq NP$.

What's "P=NP?", and why is it such a famous question? NP-complete problem means an NP problem X, such that any NP problem Y can be reduced to X by a polynomial reduction. That implies that if anyone ever comes up with a polynomial-time solution to an NP-complete problem, that will also give a polynomial-time solution to any NP problem. Thus that would prove that $P=NP$. **computer science - Proving that $P \leq NP$ - Stack Overflow** Jun 9, 2024 · A non-deterministic computer that solves a (NP) problem in polynomial time would also solve a P problem in polynomial time. If we consider the imaginary approach of a Turing Machine that can take several paths at a decision to solve the NP problem in polynomial time, this behaviour must be enough to solve the P problem in P Time. *Is P vs NP the same thing as being solvable by classical vs.* Sep 9, 2018 · No, classical computers can solve NP problems, just not quickly for large problem sizes. Practical performance is not at all the point of the P vs NP problem. I think (but am not sure) that there could be some classical-polynomial-time problems which a quantum computer could solve more quickly than a classical computer of comparable technology level. **Solving 2sat #P algorithm results into $P=NP$ - Stack Overflow** Apr 29, 2017 · Showing a polynomial-time reduction for any NP problem from its corresponding #P-problem (as the second quote did) means that if such an algorithm exists, for any NP-problem we can look at its counting problem (which is in #P by definition), reduce it into #2SAT, solve it and get the result for the NP problem - all in polynomial time. **can some sorting be P, NP, and NP-Complete? - Stack Overflow** Dec 12, 2012 · Clearly, every problem that can be solved in polynomial time (P) is in NP (you can solve the problem yourself and compare to the right answer in P time). Right now we have several problems that can be verified in

polynomial time but cannot be solved in the same. **What would a $P=NP$ proof be like, hypothetically?** Dec 12, 2012 · Would it be an polynomial time algorithm to a specific NP-complete problem, or just abstract reasonings that demonstrate solutions to NP-complete problems exist? It seems that the a specific algoi... *What are the differences between NP, NP-Complete and NP-Hard?* Dec 7, 2009 · NP-hardness of some "problem-P" is usually proven by converting an already proven NP-hard problem to the "problem-P" in polynomial time. To answer the rest of question, you first need to understand which NP-hard problems are also NP-complete.
