Rammed Earth Conservation C. Mileto,F. Vegas,V. Cristini,2012-05-31 Includes a free CD containing the full contents of the book. The rammed earth technique, in all its variants, is widespread all over the world. This enormously prevalent building technique harbours an important richness of varieties both in application and in materials used. Interventions on historical rammed earth buildings have also been carried out in all the geographical areas where these structures are found. This historical heritage has undergone diverse forms of reconstruction, conservation, repair, substitution and/or structural consolidation. The different criteria applied require different techniques, materials or forms of intervention. The results of the interventions have also been manifold, both in terms of the impact on the building and the technical and material durability. With a view to these issues, this book deals with rammed earth architecture and its restoration, and, in a more general sense, with the construction techniques and restoration of all earthen structures. Rammed Earth Conservation will be a valuable source of information for academics and professionals in the fields of Civil Engineering, Construction and Building Engineering and Architecture.

Soil-Structure Interaction, Underground Structures and Retaining Walls V.M. Ulitsky,M.B. Lisyuk,A.G.

Shashkin,2015-02-24 With construction techniques becoming ever more complex, and population pressure leading to the development of increasingly problematic sites, expertise in the area of soil structure interaction is crucial to architectural and construction industries worldwide. This book contains the proceedings of the ISSMGE Technical Committee 207 International Conference on Geotechnical Engineering - Soil Structure Interaction and Retaining Walls - held in St Petersburg, Russia, in June 2014. The conference was dedicated to the memory of the outstanding geotechnical expert Gregory Porphyryevich Tschebotarioff. Topics covered at the conference included: soil structure interaction, underground structures and retaining walls, site investigation as a source of input parameters for soil structure interaction, and interaction between structures and frozen soils. The papers included here are the English language papers. Papers presented by the authors in Russian are published by the Georeconstruction Institute of St. Petersburg.

Ingeniería de Vías Férreas José Antonio Guerrero Fernández, 2017-02-09 Este libro presenta los lineamientos básicos para el proyecto y construcción de vías férreas con el afán de ir mejorando e incrementando el número de ferrocarriles que den servicio a una cada vez mayor cantidad de personas, empresas públicas y empresas privadas. El entorno normativo y de criterios se enfoca a los ferrocarriles en México, pero los conceptos fundamentales son de aplicación a proyectos ferroviarios en cualquier lugar del mundo. Se hace mención, en el tema y capítulo respectivo, a la correspondencia con la normativa actual mexicana y/o a las especificaciones internacionales en las cuales se basa o sustenta el método que se esté exponiendo. Se exponen las características más importantes del material ferroviario y los estándares de calidad para su fabricación: el riel, los durmientes, la fijación, los sistemas de unión, el balasto, etcétera. Se hace una breve mención a los estudios topográficos y del suelo que son necesarios para proyectar y construir vías férreas en terrenos específicos.

Geotechnical Engineering in the XXI Century: Lessons learned and future challenges N.P. López-Acosta, E. Martínez-Hernández, A.L. Espinosa-Santiago, 2019-11-26 The first Pan-American Conference on Soil Mechanics and Geotechnical Engineering (PCSMGE) was held in Mexico in 1959. Every 4 years since then, PCSMGE has brought together the geotechnical engineering community from all over the world to discuss the problems, solutions and future challenges facing this engineering sector. Sixty years after the first conference, the 2019 edition returns to Mexico. This book, Geotechnical Engineering in the XXI Century: Lessons learned and future challenges, presents the proceedings of the XVI Pan-American Conference on Soil Mechanics and Geotechnical Engineering (XVI PCSMGE), held in Cancun, Mexico, from 17 - 20 November 2019. Of the 393 full papers submitted, 335 were accepted for publication after peer review. They are included here organized into 19 technical sessions, and cover a wide range of themes related to geotechnical engineering in the 21st century. Topics covered include: laboratory and in-situ testing; analytical and physical modeling in geotechnics; numerical modeling in geotechnics; unsaturated soils; soft soils; foundations and retaining structures; excavations and tunnels; offshore geotechnics; transportation in geotechnics; natural hazards; embankments and tailings dams; soils dynamics and earthquake engineering; ground improvement; sustainability and geo-environment; preservation of historic sites; forensics engineering; rock mechanics; education; and energy geotechnics. Providing a state-of-the-art overview of research into innovative and challenging applications in the field, the book will be of interest to all those working in soil mechanics and geotechnical engineering. In this proceedings, 58% of the contributions are in English, and 42% of the contributions are in Spanish or Portuguese.

Ingeniería de vías agroforestales HERRÁEZ GARRIDO, FERNANDO, MORENO VEGA, ALBERTO, 2019-05-14 Diseño, cálculo, construcción y mantenimiento de caminos En España, la longitud actual de la red de caminos rurales y vías o pistas agroforestales resulta incluso superior a la de carreteras. Estas infraestructuras lineales, aparte de comunicar pequeños núcleos poblacionales, prestan servicio a todos los aprovechamientos agroforestales y al turismo rural, cuyas actividades

podrían verse muy afectadas en caso de no existir dicha red. Entre las atribuciones de los antiguos Ingenieros y actuales Graduados y Másteres en Ingeniería Agronómica y de Montes está la de proyectar caminos, ya sean agrícolas o forestales, así como las de dirigir, controlar o certificar las obras para la construcción y el mantenimiento de los mismos. Pero las actuales necesidades de comunicación, junto con la modernización del sector agroforestal, sobre todo en lo que se refiere a maquinaria e infraestructuras, ha modificado el concepto de “camino rural”, demandando estudios mucho más detallados de su geometría y sus firmes en función de las intensidades de tráfico presentes y futuras. La utilización de máquinas agroforestales cada vez más potentes y pesadas, capaces de arrastrar cargas remolcadas de hasta 24 t, unido al aumento de las dimensiones y velocidades de los vehículos en general, ha dado lugar a unas mayores exigencias constructivas en los viales agroforestales. Unos caminos que, dado el ajustado presupuesto existente para este tipo de obras, precisan y exigen de fórmulas y técnicas duraderas y a la vez económicamente viables, tanto en su diseño, como en su ejecución y mantenimiento. Por todo ello, se ha considerado necesario elaborar un libro donde se aborden todas estas cuestiones. Una publicación dirigida tanto a estudiantes de ingenierías agrícolas y forestales, como a los titulados de las mismas o a cualquier profesional que tenga una relación directa o indirecta con esta materia.

Terzaghi Lectures Karl Terzaghi,1986-01-01 Sponsored by the Executive Committee of the Geotechnical Engineering Division of ASCE. This Geotechnical Special Publication contains eight lectures given between 1974 and 1983 in honor of Karl Terzaghi and representing diverse aspects of geotechnical engineering and engineering geology. Topics include: the relationship of geology and geotechnical engineering and how a study of the geology of engineering sites is an important starting point for all geotechnical site studies; effects of dynamic soil properties on soil-structure interaction; bearing capacity and settlement of pile foundations; design and construction of drilled shafts; evaluating calculated risk in geotechnical engineering; proposal for the establishment of a national center for investigating civil engineering failures, with several case studies; pre-Columbian earth construction in the Americas and technological developments between 2,500 and 500 years ago; and recent progress in the design and construction of concrete-face rockfill dams. The 1978 lecture by the late N.M. Newmark is not included.

Apertura y mantenimiento de vías forestales MOHEDAS DÍAZ, MARGARITA,MORENO VEGA, ALBERTO,2014-01-01 Se analizan aquí a las vías de titularidad pública o privada que cubren las necesidades de tráfico generadas en las explotaciones o zonas forestales para comunicar directamente los fines relacionados con los aprovechamientos madereros y no leñosos (corcho, hongos, frutos, etc.), así como las actividades ganaderas (cerdo ibérico) vinculadas a la dehesa. Los

caminos forestales presentan unas dimensiones de longitud-anchura variables y generalmente soportan un bajo nivel de tráfico. El presente manual se corresponde con la Unidad Formativa UF0507, incluida en el Módulo Formativo MF1125_2: Repoblación forestal y corrección hidrológico-forestal, que a su vez forma parte del Certificado de Profesionalidad (AGAR0208): Repoblaciones forestales y tratamientos selvícolas, y cuyo contenido sigue a lo establecido por el Real Decreto 1375/2008, de 1 de agosto, que regula los Certificados de Profesionalidad en la Familia Profesional Agraria. Asimismo, se indican métodos teóricos y pasos a seguir para entender o realizar un proyecto técnico sobre caminos rurales, donde las diferentes fórmulas matemáticas de los cálculos constructivos han sido simplificadas al máximo en los anejos. Por ello, este manual dedicado a las vías forestales puede servir para cubrir tanto las necesidades formativas de la cualificación profesional MF1125_2/ UF0507 como las didácticas de asignaturas universitarias (Grados en Ingeniería Forestal y Agrícola) cuyos contenidos abarquen esta materia. Margarita Mohedas Díaz es Ing. de Montes, Master en Educadora Ambiental y Técnico Superior en PRL. Realizó, hasta tercer curso, la titulación de Ing. Técnico de Obras Públicas, especialidad en Construcciones Civiles. Actualmente trabaja para la empresa multinacional Saint Gobain Pam y cursa el MBA. Ha investigado en Aberdeen (Escocia) sobre micorrasas de coníferas.
