The Economics of Social Responsibility Carlo Borzaga, Leonardo Becchetti, 2010-06-10 This book offers a rethinking of the burgeoning research on not-for-profit organizations and socially responsible economics. Adopting a comparative approach, the chapters explore and reinterpret the impact of social enterprises on the provision of general-interest services, work integration, microfinance, and fair trade, and show how these enterprises form the hub of an emerging economy of social responsibility. The book provides a new interpretation of social enterprises as entrepreneurial organizations that pursue social objectives and are successful due to the non-self-seeking motives of their members. This book will be of interest to postgraduate students, professionals working in the not-for-profit sector, and scholars interested in socially responsible economics. It is particularly suitable for seminars and workshops focusing on the management of not-for-profit organizations, sustainable development, and globalization.

Hyperbolic Differential Operators And Related Problems Vincenzo Ancona, Jean Vaillant, 2003-03-06 Presenting research from more than 30 international authorities, this reference provides a complete arsenal of tools and theorems to analyze systems of hyperbolic partial differential equations. The authors investigate a wide variety of problems in areas such as thermodynamics, electromagnetics, fluid dynamics, differential geometry, and topology. Renewing thought in the field of mathematical physics, Hyperbolic Differential Operators defines the notion of pseudosymmetry for matrix symbols of order

zero as well as the notion of time function. Surpassing previously published material on the topic, this text is key for researchers and mathematicians specializing in hyperbolic, Schrödinger, Einstein, and partial differential equations; complex analysis; and mathematical physics.

A History of the University in Europe Hilde de Ridder-Symoens,Walter Rüegg,1992 A History of the University in Europe covers the development of the university in Europe (East and West) from its origins to the present day. No other up-to-date, comprehensive history of this type exists: its originality lies in focusing on a number of major themes viewed from a European perspective, and in its interdisciplinary, collaborative and transnational character. Volume 1, covering the Middle Ages, places the medieval European universities in their social and political context. After explaining the number and types of universities from their origins in the twelfth century to around 1500, it examines the inner workings as an institution and paints a general picture of medieval student life. Volume 2 attempts to situate the universities in their social and political context throughout the three centuries spanning the period 1500 to 1800. Volume 3 shows that by focusing on the freedom of scientific research, teaching and study, the medieval university structure was modernized and enabled discoveries to become a professional, bureaucratically-regulated activity of the university. This opened the way for the victorious march of the natural sciences, and led to student movements--resulting in the university being ultimately cast in the role of a citadel of political struggle in a world-wide fight for freedom. - Publisher.

The iter italicum and the Northern Netherlands Ad Tervoort, 2004-12-01 The iter italicum, the peregrinatio academica to prestigious Italian universities, holds a special place in the history of late-medieval universities. Students from all over Europe flocked to the studia on the peninsula, including several well-known - but how many more unknown? - scholars and humanists from the Northern Netherlands. Nevertheless, this group of adventurous students has not yet been honoured with a monograph. This volume fills that gap. It provides the first comprehensive analysis of the nature of the iter italicum from the Northern Netherlands in the late-medieval period. Through a systematic investigation of the academic activities, background, and careers of 640 - many hitherto unknown - students, the author unravels the character of the iter italicum and its place in, and contribution to, society and culture in this transitional period for the Low Countries.

Mathematical Finance Michael Kohlmann, Tang Shanjian, 2012-12-06 The year 2000 is the centenary year of the publication of Bachelier's thesis which - together with Harry Markovitz Ph. D. dissertation on portfolio selection in 1952 and Fischer Black's and Myron Scholes' solution of an option pricing problem in 1973 - is considered as the starting point of modern finance as a mathematical discipline. On this remarkable anniversary the workshop on mathematical finance held at the University of Konstanz brought together practitioners, economists and mathematicians to discuss the state of the art. Apart from contributions to the known discrete, Brownian, and Levy process models, first attempts to describe a market in a reasonable way by a fractional Brownian motion model are presented, opening many new aspects for practitioners and new problems for mathematicians. As most dynamical financial problems are stochastic filtering or control problems many talks

presented adaptations of control methods and techniques to the classical financial problems in portfolio selection irreversible investment risk sensitive asset allocation capital asset pricing hedging contingent claims option pricing interest rate theory. The contributions of practitioners link the theoretical results to the steadily increasing flow of real world problems from financial institutions into mathematical laboratories. The present volume reflects this exchange of theoretical and applied results, methods and techniques that made the workshop a fruitful contribution to the interdisciplinary work in mathematical finance.
