Color Planning for Interiors Margaret Portillo, 2010-09-09 Evidence-based approach to color planning lets you discover the impact of color on people and space. You'll learn to systematically develop innovative, holistic color solutions in interior design with this book's evidence-based approach to color planning. The author sets forth a color planning framework that integrates multiple criteria, enabling you to fully consider the complex role that color plays in interior design. Color Planning for Interiors is based on the findings from a national study that the author conducted, which identified five categories of color criteria: Color as Composition Color Preferences Color as Communication Color Pragmatics Color for Engagement The author interviewed noted designers and colorists about the projects that best represented their approach to color. As a result, you'll discover how leaders in the field examine color from compositional, symbolic, behavioral, preferential, and pragmatic perspectives in order to arrive at a carefully considered solution. Moreover, you'll see how designers and architects apply this knowledge to a broad range of interior spaces, including workplaces, restaurants, retail settings, healthcare facilities, and private residences. Complementing theory and research, real-life examples are presented from interior design projects that consider color in relation to light, materiality, and interior architecture. In addition, full-color diagrams, photographs, and design renderings illustrate concepts throughout the book to help you understand how to select

and work with color. From the fundamental principles of color theory to innovative applications, all aspects of designing interiors with color are examined, making this book ideal for all professionals and students in interior design who want to develop the full potential of their color palettes.

On the Role of Contrast in Information Structure Jorina Brysbaert, Karen Lahousse, 2024-06-04 In research on Information Structure, there is an ongoing discussion about the role of contrast. While most linguists consider contrast to be compatible with both focus and topic, some argue that it is an autonomous IS category. Contrast has been shown to be encoded by different linguistic means, such as specific morphemes, adverbials, clefts, prosodic cues. Hence, this concept is also related to other domains, in particular morphosyntax and prosody. The precise way in which they interact is however not yet entirely clear. Moreover, from a methodological point of view, the identification and annotation of contrast in corpora is not straightforward. This volume provides a selection of articles discussing the definition of contrast, the importance of distinguishing different types of contrast, the use of several encoding strategies, and the annotation of contrast in corpora using the Question Under Discussion Model. The contributions offer data on English, French, French Belgian Sign Language, German, Hindi, Italian and Spanish.

Travel, Space, Architecture Miodrag Mitrasinovic, 2016-02-17 Travel, Space, Architecture defines a new theoretical territory in architectural and urban scholarship that frames the processes of spatial production through the notion of travel. By aligning architectural thinking with current critical theory debates, this book explores whether dissociating culture from place and identity, and detaching the idea of architecture from both, can reframe our understanding of spatial and architectural practices. The book presents seventeen key case studies from a diverse range of perspectives including historical, theoretical, and praxis-based, and range from interrogations of architectural travel and notions of belonging and nationhood to challenging established geopolitical hierarchies.

Color - Communication in Architectural Space Gerhard Meerwein, Bettina Rodeck, Frank H. Mahnke, 2007-06-08 Colors are an element of both the natural and the man-made environments. They convey messages of all kinds and perform a wide variety of functions, informing, organizing, warning. But they also serve an aesthetic purpose, affecting the statement, effect, and acceptance of objects and spaces. While people's reactions to color vary widely, in design questions it is still possible to establish generally valid color concepts to match the expectations of the various groups of users. This book offers a guide based on a wide range of scientific findings and may be consulted as an authoritative reference by the architecture student and the professional alike. The three editors, Dr. B. Rodeck, Prof. G. Meerwein, and F. H. Mahnke have taught for many years at the Salzburger Seminare für Farbe und Umwelt der IACC.

Reading between Designs Piers D. Britton, Simon J. Barker, 2010-01-01 From the alien worlds of Star Trek to the realistic operating room of ER, the design of sets and costumes contributes not only to the look and mood of television shows, but even more importantly to the creation of memorable characters. Yet, until now, this crucial aspect of television creativity has received little critical attention, despite the ongoing interest in production design within the closely allied discipline of film studies. In this book, Piers Britton and Simon Barker offer a first analytical study of scenic and costume design for television drama series. They focus on three enduringly popular series of the 1960s—The Avengers, The Prisoner, and Doctor Who—and discuss such topics as the sartorial image of Steed in The Avengers, the juxtaposition of picturesque and fascistic architecture in The Prisoner, and the evolution of the high-tech interior of Doctor Who's TARDIS. Interviews with the series' original designers and reproductions of their original drawings complement the authors' analysis, which sheds new light on a variety of issues, from the discourse of fashion to that of the heritage industry, notions of Pop and retro, and the cultural preoccupation with realism and virtual reality.

Gunn's Golden Rules Tim Gunn, Ada Calhoun, 2010-09-07 The author draws on examples from his own life, backstage experiences on Project Runway, and anecdotes from the fashion world to explain how hard work, creativity, and integrity can help lay the groundwork for success and happiness.

An Inclusive Environment Maritz Vandenberg, 2008-09-24 People can be excluded from freedom and the good things in life by age, disability, poverty, unfair discrimination, crime or the fear of crime, and arrogant and unresponsive governments. This practical reference deals with all of these factors, and shows the links between them. In addition to several hundred

shorter notes it includes over a thousand major entries, each of which comprises: a summary of relevant facts, incisive commentary to help readers cut through the fog of jargon and propaganda that confuses many of these issues and websites where the latest information may be found. It concludes with a detailed bibliography of around 500 useful references. The work will be found useful by professionals and managers in all walks of life; by central and local government officials and representatives, and by students in the social sciences. It devotes particular attention to the all-important Disability Discrimination Act, and numerous detailed entries, accompanied in many cases by elegant diagrams, suggest to architects and other designers, facilities managers, and personnel managers how the requirements of the Act may be met.
