Using the Biological Literature Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types, from younger fields like molecular biology with its reliance on recent journal articles, genomic databases, and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries. *Using the Biological Literature: A Practical Guide, Fourth Edition* is an annotated guide to selected resources in the biological sciences, presenting a wide-ranging list of important sources. This completely revised edition contains numerous new resources and descriptions of all entries including textbooks. The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature. It covers both print and electronic resources including monographs, journals, databases, indexes and abstracting tools, websites, and associations—providing users with listings of authoritative informational resources of both classical and recently published works. With chapters devoted to each of the main fields in the basic biological sciences, this book offers a guide to the best and most up-to-date resources in biology. It is appropriate for anyone interested in searching the biological literature, from undergraduate students to faculty, researchers, and librarians. The guide includes a supplementary website dedicated to keeping URLs of electronic and web-based resources up to date, a popular feature continued from the third edition.

Fundamentals of Cell Biology, Genetics, Molecular Biology, Evolution, and Ecology Dr. Pravin Joshi, Dr. Chandrashekhar R. Kasar, Dr. Prashant J. Awate, Dr. V. Sreedevi, 2024-07-29 *Cell Biology, Genetics, & Biochemistry of Pre-Clinical Students* provides undergraduate medical students with core understanding in genetics, cell biology, and biochemistry. Cell Biology is the study of one of biology's most basic and intricate structures: the cell. The cell is the fundamental unit of life, with all structural and functional qualities necessary for survival. The book is organised into ten chapters, starting with the origins of biological systems & finishing with instruments for studying cells. We've done our best to include most current data. The quantity of images in each chapter is sufficient. This book can be used as a reference for anyone interested in learning the foundations of cell biology, specifically the origin, organisation, and functions of subcellular components and cell types, or it can be used as a basic textbook for students studying molecular biology, genetics, biochemistry, agriculture, and biotechnology. This book also provides deep analysis of mendelian genetics and his experiments with including genetic engineering and biotechnology. The study of genetics, sometimes referred to as "Science of Heredity", focusses on biological information and how it is passed down through successive generations and how it is employed. Three primary subfields of genetics research exist: population genetics, molecular genetics, & transmission genetics. The main topic of discussion in this introductory course is Transmission, often known as Classical Genetics, which addresses the fundamentals of heredity and the methods by which characteristics are handed down from one generation to the next. Since Gregor Mendel's work is essential to Transmission Genetics, a discussion of his groundbreaking work and

Mendel's Laws as they apply to inheritance takes place. The organisation of genes on chromosomes, physical mapping of genes, and the connection among chromosomes and heredity are among the other facets of classical genetics that are discussed.

Knowledge of Life Today Jean Gayon, Victor Petit, 2019-04-09 Knowledge of Life Today presents the thoughts of Jean Gayon, a major philosopher of science in France who is recognized across the Atlantic, especially for his work in philosophy and the history of life sciences. The book is structured around Gayon's personal answers to questions put forward by Victor Petit. This approach combines scientific rigor and risk-taking in answers that go back to the fundamentals of the subject. As well as the relationship between philosophy and the history of science, Gayon discusses the main questions of the history and philosophy of biology that marked his intellectual journey: Darwin, evolutionary biology, genetics and molecular biology, human evolution, and various aspects of the relationship between biology and society in contemporary times (racism, eugenics, biotechnology, biomedicine, etc.).

Life on Display Karen A. Rader, Victoria E.M. Cain, 2014-10-03 Rich with archival detail and compelling characters, *Life on Display* uses the history of biological exhibitions to analyze museums' shifting roles in twentieth-century American science and society. Karen A. Rader and Victoria E. M. Cain chronicle profound changes in these exhibitions—and the institutions

that housed them—between 1910 and 1990, ultimately offering new perspectives on the history of museums, science, and science education. Rader and Cain explain why science and natural history museums began to welcome new audiences between the 1900s and the 1920s and chronicle the turmoil that resulted from the introduction of new kinds of biological displays. They describe how these displays of life changed dramatically once again in the 1930s and 1940s, as museums negotiated changing, often conflicting interests of scientists, educators, and visitors. The authors then reveal how museum staffs, facing intense public and scientific scrutiny, experimented with wildly different definitions of life science and life science education from the 1950s through the 1980s. The book concludes with a discussion of the influence that corporate sponsorship and blockbuster economics wielded over science and natural history museums in the century's last decades. A vivid, entertaining study of the ways science and natural history museums shaped and were shaped by understandings of science and public education in the twentieth-century United States, *Life on Display* will appeal to historians, sociologists, and ethnographers of American science and culture, as well as museum practitioners and general readers.

Report on Carcinogens (12th Ed.) Nat. Toxicology Program (NTP) (NIH), 2011-10-08 The Report on Carcinogens (RoC) is a congressionally mandated, science-based, public health document that identifies and discusses agents, substances, mixtures, or exposure circumstances (hereinafter referred to as substances) that may pose a hazard to human health by virtue of their carcinogenicity. For each listed substance, the report contains a substance profile which provides information on (1) the listing status, (2) cancer studies in humans and animals, (3) studies of genotoxicity (ability to damage genes) and biologic mechanisms, (4) the potential for human exposure to these substances, and (5) Federal regulations to limit exposures. Eight substances have been added to this 12th ed. of the report, which now includes 240 listings. The industrial chemical formaldehyde and a botanical known as aristolochic acids are listed as known human carcinogens. Six other substances captafol, cobalt-tungsten carbide (in powder or hard metal form), certain inhalable glass wool fibers, o-nitrotoluene, riddelliine, and styrene are added as substances that are reasonably anticipated to be human carcinogens. Figures. This is a print on demand report.
