Desarrollo de Sistemas de Información una Metodología Basada en el Modelado Vicenç Fernández Alarcón, 2010-03 El

objetivo de este libro es exponer, de forma práctica, el proceso de desarrollo de un sistema de información centrándose en el análisis de las necesidades de una empresa o negocio y en el diseño lógico de un sistema de información que satisfaga estos requisitos, pero sin olvidar las demás etapas en su desarrollo. Para ello, el libro se estructura en tres módulos. El primer módulo introduce qué es un sistema de información, así como otros elementos importantes para su comprensión. El segundo bloque expone, de forma detallada, las etapas y las fases que forman el ciclo de vida de un sistema de información: planificación, análisis, diseño, implantación y soporte de sistemas. Por último, el tercer bloque presenta tres técnicas: el modelado de casos de uso, el modelado de datos y el modelado de procesos, para el desarrollo de sistemas de información a través de varios ejemplos. El libro también ofrece un conjunto de ejercicios y problemas sobre el desarrollo de sistemas de información, un glosario con los términos más importantes y una extensa bibliografía, que ayudarán al lector en su proceso de aprendizaje.

Sistemas de Información Medioambiental José Manuel Cotos Yáñez, José Ángel Taboada González, 2003-09 La grave degradación del medioambiente que la acción del hombre ha provocado en el último siglo ha despertado en las sociedades más avanzadas la preocupación por su conservación. Además, la facilidad con la que errores humanos o acciones deliberadas provocan catástrofes ha exigido su vigilancia. Tratamos en este libro la aportación de las Tecnologías de la Información (TI) a la conservación y protección del medioambiente dividiéndolo en dos partes claramente diferenciadas. La primera parte del libro introduce al lector en la teoría de las tecnologías utilizadas. La distribución espacial de la información utilizada justifica el uso extensivo de los Sistemas de Información Geográfica que añaden a los Sistemas de Información clásicos, soportados

por las Bases de Datos, la necesaria gestión espacial. Asimismo, el volumen de información normalmente manejada hace necesario su análisis automático a través de novedosas técnicas introducidas en los dos últimos capítulos de esta primera parte. Ya en la segunda parte del libro se presentan al lector un conjunto de aplicaciones funcionando en la actualidad, que muestran el uso práctico de estas tecnologías. Entre ellas cabe destacar el Sistema de Información Ambiental puesto en marcha por la Xunta de Galicia, la clasificación de usos del suelo a partir de datos in situ e imágenes de satélite desarrollada por el SITGA, ambos claros ejemplos del manejo de datos espacialmente distribuidos. Otras aplicaciones atienden además a la gestión en tiempo real de los datos como el sistema de Gestión de Medios Aéreos Contraincendios, la gestión de residuos sólidos urbanos o el control energético.

Management Information Systems Kenneth C. The twelfth edition focuses on the major changes that have been made in information technology over the past two years, and includes new opening, closing, and Interactive Session cases.
