Jojoba, January 1982 - March 1989 Henry Gilbert, 1989

Higher Education and Equality of Opportunity Fred A. Lazin, N. Jayaram, Matt Evans, 2012-07-10 The movement to broaden access to public universities, the dominant strategy during the 1970s and 1980s, has largely shifted to enable the marketplace, rather than the government, to shape the contours of higher education. Government funding is being reduced, affirmative action and other programs designed to insure broader access are in decline and personal fulfillment is replacing a public good designed to insure greater equality of opportunities. This book explores the impact of diminishing government resources and expanding market forces in developing and developed countries to either foster or lessen equality of opportunities in higher education for different racial, ethnic, religious and gender groupings. What are the consequences of a market-driven higher education for student access, teaching and scholarship? Through case studies, this book explores issues such as access of minority groups within the larger societies, the place of foreign students in a national system, and access for students with mental health difficulties, and evaluates the success of funding schemes designed to expand opportunities and access. The research provides an interesting contrast of the diversity and uniqueness of higher education in the United States, France, Australia, India, Israel, South Korea, The Netherlands, Ghana and several other countries, while at the same time revealing surprising commonalities. These studies reveal world-wide trends in higher education including a cutback in government financing, a decline in access, and a receding of affirmative action. This book is an important addition to the literature on higher education during the age of globalization and the decline of government funding of higher education. The

studies provide important data about the current situation in higher education in countries around the world.

Vegetables, Whole Grains, and Their Derivatives in Cancer Prevention Marja Mutanen, Anne-Maria Pajari, 2010-10-06
Vegetables, Whole Grains and their Derivatives in Cancer Prevention looks in detail at the evidence regarding the effects and mechanisms of action of potentially cancer-preventive components and their sources from plant kingdom. The book covers current knowledge on certain foods and their constituents in cancer prevention, such as cruciferous and green leafy vegetables, nuts and seeds, whole grains, tomato lycopene and carotenoids, alliums and their sulphur and selenium constituents, and capsaicinoids from chilli peppers. It focuses not only on single compounds but aims to widen the view by discussing a whole-diet approach in cancer prevention. A single component may lose its chemopreventive efficacy when isolated from the food matrix and in many cases isolated and concentrated components as supplements may actually induce tumor development. Apart from describing the effects and mechanisms of action, the chapters also contain information on intake, bioavailability, metabolism and possible toxic effects of foods and components presented. Evaluation and comparison of the data from mechanistic studies in vitro with those from animal experiments in vivo form a basis for applying the current knowledge to human nutrition in the field of carcinogenesis. With contributions from leading experts in the field, this book is an invaluable resource for scientists and professionals working in cancer research, as well as individuals involved in food and nutrition.

Financial Markets in Perspective Arie Arnon, Maria Cristina Marcuzzo, Annalisa Rosselli, 2022-02-11 This book examines financial markets from a historical perspective. Bringing together contributions from leading historians of economic thought, economists and economic historians, it offers an integrated approach and reflects on the workings of financial markets, their impact on and relation with the rest of the economy and how their role was and is understood by economics. The contributions cover topics such as classical and modern economic thinking on financial markets and institutions, as well as financial models and innovations, and also present case studies on financial history and on policy issues. The historical perspective leads to a representation of markets not as abstract and timeless mechanisms but as institutions populated by a diversity of agents, subject to rules and customs, and influenced by scientific developments and economic theories.

Detection of Bacteria, Viruses, Parasites and Fungi Mariapia Viola Magni, 2010-08-04 This publication represents the result of the fruitful workshop organised with the aim to attract the attention on the possibility of bio terrorism attack, with the support of NATO funds. In the last years the attention was strongly concentrated on the terrorism view similar to "military type attacks:" bomb on the trains, kamikazes, airplanes etc. As consequence many devices studied are directed to prevent these attacks such as the control of the passengers before the flight. For the people terrorism is therefore equivalent to bomb or similar and nobody think that there is also other possible and sophisticated means that can be used by the terrorist. In

1995 Sarin gas in the Tokio subway killed 12 people and affected 5,000 persons. In the USA anthrax was sent by mail to many federal offices. These events and other cases attract the attention on these possible terrorist attacks and the first recommendations for preventing these events were elaborated in the United State and in Europe. The possible agents and the modality that can be used for the diffusion are analysed and food and water are considered the principal and more favourable way. The story and the principal decision about this were reported in the first article of this collection which introduces the concept of bio-terrorism.

It analyzes Israel's civil society and social movements as well as social entrepreneurship and their expression in the Third Sector. The book also covers the development of research and education on the Third Sector; it includes a review of research centers, databases, journals, and specific programs that were developed by Israeli universities.

Routledge Handbook on Zionism Colin Shindler, 2024-06-28 This Handbook, the first of its kind, provides an in- depth examination of the evolution, ideology, history and culture of Zionism and its various movements. Distancing itself from the slogans and cliches of advocacy, the volume provides much-needed context and background on the emergence of Zionism. The Handbook is divided into eight parts - with contributions from some forty of the world's leading scholars on Zionism -to elucidate its various strands. These include underrepresented areas such as Zionism in the Arab World before the establishment of the State of Israel, Zionism and Marxism, the emergence of the Zionist Right, the language war between Hebrew and Yiddish, the struggle for Jewish women's suffrage, the poetry of Lea Goldberg, and Zionism in emerging new Jewish communities in locations like Papua New Guinea, Guatemala and Zimbabwe. Another section on Zionism in repressive states stretches from an examination of Zionism in Hitler's Germany to the Ayatollahs' Iran today; from subterranean Zionism in Stalin's Russia to apartheid South Africa. The volume concludes by examining current issues, including the relationship between evangelicals and Zionism in the US, and the representation of Zionism in the age of the internet. Providing a sweeping overview of Zionism in its many forms, the volume will appeal to students, researchers and general readers interested in Jewish studies in the Middle East and beyond, as well as those seeking to understand the roots of contemporary Israel.
