San Carlino alle Quattro Fontane: ampliamento e modifiche settecentesche al progetto borrominiano | San Carlino alle Quattro Fontane: eighteenth-century enlargement and changes to Borromini's design Marta Grau Fernandez, Ignacio Bosch Reig, 2017-03-08T00:00:00+01:00 Il presente articolo è incentrato sullo studio - fino ad oggi mai realizzato - dell'ampliamento del convento di San Carlino alle Quattro Fontane realizzato agli inizi del secolo XVIII dall'architetto Alessandro Sperone, che ha prodotto significative alterazioni formali e funzionali nel progetto originale di Borromini. I documenti dell'Archivio di San Carlino - fino ad oggi inediti e dispersi - sono stati durante la ricerca tradotti e sintetizzati in elaborati, schemi, tavole e testi che consentono una visione unitaria dell'insieme e permettono di individuare la configurazione originale di entrambi i progetti e gli interventi più significativi realizzati nel corso dei secoli. | This article focuses on the unpublished study of the enlargement of the convent of San Carlino alle Quattro Fontane performed in the early eighteenth century by the architect Alessandro Sperone. The enlargement made important formal and functional changes to Borromini's original design. During the research, documents in the Archive of San Carlino - as yet unpublished and scattered - were translated and condensed in drawings, diagrams, tables and texts to not only provide a unitary vision of the ensemble, but also identify the original configuration of both projects and the most important interventions made over the centuries.

Finding San Carlino Adil Mansure, Skender Luarasi, 2019-12-06 The church of San Carlo alle Quattro Fontane, also called San Carlino, is an architectural artefact that continues to attract numerous hypotheses and geometric analyses attempting to explain its form and meaning. Numerous investigations have attempted to reveal its underlying geometrical principles, without, however, reaching a consensus. Finding San Carlino presents an edited collection of perspectives on Borromini's famous Baroque church from a range of established and emerging scholars in architectural history and theory, including Werner Oechslin, Karsten Harries, Michael Hill and Lauren Jacobi amongst others. This book offers the reader different means of engaging with, enjoying and articulating San Carlino's complexity, non-consensus and ambiguity. It is

precisely such a unique disposition that motivates this book to explore multiple modes of architectural enquiry and delve into a series of theoretical and historiographical questions such as: why was Borromini not able to post-rationalize his architecture with his drawings? What is San Carlino's exemplary value, and why does it continually engender exegetical and hermeneutic desire? What is the role of geometry in architecture, in history and today? Written for researchers, scholars and postgraduate students in architectural history and theory, the book uses San Carlino as an enigmatic centering point for a set of significant contemporary voices to explore new modes of confrontation and comparison.

Borromini (Revised) Anthony Blunt, 1979 At first glance, Borromini's architecture is a flight of Baroque fantasy, the product of limitless imagination. A closer look reveals an almost ruthlessly logical geometry underlying his creation. Blunt shows how the combination of revolutionary inventiveness and intellectual control gives Borromini's work its great appeal.

Art and Architecture in Italy, 1600-1750 Rudolf Wittkower, Joseph Connors, Jennifer Montagu, 1999-01-01 This classic survey of Italian Baroque art and architecture focuses on the arts in every center between Venice and Sicily in the early, high, and late Baroque periods. The heart of the study, however, lies in the architecture and sculpture of the exhilarating years of Roman High Baroque, when Bernini, Borromini, and Cortona were all at work under a series of enlightened popes. Wittkower's text is now accompanied by a critical introduction and substantial new bibliography. This edition-now published in three volumes-will also include color illustrations for the first time.

Storia di San Carlino alle Quattro Fontane Paolo Portoghesi, Marisa Tabarrini, 2001

Historical Dictionary of Francesco Borromini Lilian H. Zirpolo, 2025-07-10 Francesco Borromini was one of the most notable architects of the 17th century, and though he fell into disfavor by the end of the following century, today he is classified as one of the most innovative architects in history. Although Borromini enjoyed a highly successful career, he was already subjected to intense criticism during his lifetime. Criticism continued well after Borromini's death, when the most often used word to assess his work was bizarre. Critics begrudged the fact that, in their view, Borromini ignored the traditional rules of architecture that had been established by the ancients and revived during the Renaissance era. They did not recognize that Borromini was indeed an avid student of both ancient and Renaissance architecture, and that he often borrowed elements from these two eras but then applied them to his structures in new and inventive ways. It was not until art historians began assessing Borromini's architecture in a sober and nonjudgmental manner in the late 19th century that he was finally given his proper place in the history of architecture. This book assesses Borromini's individual commissions following the proper scholarly methodology, as well as his biographical details, artistic development, relationship with his protectors and patrons, and external circumstances that might have determined his artistic output. This book emphasizes the innovations Borromini introduced to the field of architecture and how these influenced later artists.

All Sides to an Oval Angelo Alessandro Mazzotti, 2017-02-28 This is the only book dedicated to the Geometry of Polycentric Ovals. It includes problem solving constructions and mathematical formulas. For anyone interested in drawing or recognizing an oval, this book gives all the necessary construction and calculation tools. More than 30 basic construction problems are solved, with references to Geogebra animation videos, plus the solution to the Frame Problem and solutions to the Stadium Problem. A chapter (co-written with Margherita Caputo) is dedicated to totally new hypotheses on the project of Borromini's oval dome of the church of San Carlo alle Quattro Fontane in Rome. Another one presents the case study of the Colosseum as an example of ovals with eight centres. The book is unique and new in its kind: original contributions add up to about 60% of the whole book, the rest being taken from published literature (and mostly from other work by the same author). The primary audience is: architects, graphic designers, industrial designers, architecture historians, civil engineers; moreover, the systematic way in which the book is organised could make it a companion to a textbook on descriptive geometry or on CAD.

Science and Digital Technology for Cultural Heritage - Interdisciplinary Approach to Diagnosis, Vulnerability, Risk Assessment and Graphic Information Models Pilar Ortiz Calderón, Francisco Pinto Puerto, Philip Verhagen, Andrés Prieto, 2019-11-28 The scientific and technological advances that influence the protection of cultural heritage are developing at an ever-increasing pace. Systems to explore, research and analyse their materiality, to control the different scopes, or to represent and model them have reached an unprecedented dimension in recent decades. The Network of Science and Technology for the Conservation of Cultural Heritage aims to promote collaboration between the agents of these systems, in order to facilitate the sharing of experiences and to foster technology transfer, with the common goal of contributing to the conservation of Cultural Heritage. In the context of the TechnoHeritage Network, the fourth edition of the International Congress on Science and Technology for the Conservation of Cultural Heritage was held March 26-30, 2019, in Seville, Spain. This Congress was an international meeting of researchers and specialists from multiple areas, whose line of work is the knowledge and conservation of Cultural Heritage. Among all the topics discussed, the role and impact of digital technologies for the knowledge, maintenance, management and dissemination of cultural heritage should be highlighted. Digital media modify the way of understanding this heritage, of perceiving it and transmitting it, and offer a new horizon of

strategies to make decision-making more sustainable over time.

The Baroque in Architectural Culture, 1880-1980 Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume Space, Time and Architecture, Sigfried Giedion paired images of two iconic spirals: Tatlin's Monument to the Third International and Borromini's dome for Sant'Ivo alla Sapienza. The values shared between the baroque age and the modern were thus encapsulated on a single page spread. As Giedion put it, writing of Sant'Ivo, Borromini accomplished 'the movement of the whole pattern [...] from the ground to the lantern, without entirely ending even there.' And yet he merely 'groped' towards that which could 'be completely effected' in modern architecture-achieving 'the transition between inner and outer space.' The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged. This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography. It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque: a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism. Presenting research by an international community of scholars, this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century. The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history. In doing so, the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture.

Structural Design in Building Conservation Dimitris Theodossopoulos, 2012-07-26 No building is properly conserved if it is not structurally sound. Consequently architects, engineers and conservation officers need an adequate grounding in the technology, the materials and the historic origins of the building in order to complete a conservation project successfully. Structural Design in Building Conservation deals with design issues and technical choices, showing how they are integrated with the planning and architectural outcomes in a conservation project. It brings together theory with current conservation technology, discussing the possibilities of structural details and strategies in architectural expression. Case studies are central to this, and these are organised around such themes as the addition of roofs, requalification of space, strengthening and re-use of fabric, reparation, additions, completions, stiffness adjustments, and the correction of past mistakes. The reader is encouraged to examine the technical details of these real projects, and explore the possible solutions. The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries. The main types of strengthening, repairs and interventions are explained using different building types, and the structural nature of the main elements to be strengthened (linear structures, frames, plates and shells) is explored in detail. Case studies included cover a very wide range of historic types and conversions, not only monumental masonry structures

like neoclassical buildings, major temples, churches, public buildings and museums, but also more utilitarian structures like historic mills, early reinforced concrete structures and vaulting types. This is essential reading for all students of architectural conservation, and practicing architects and engineers who are involved in conservation projects.

The Stolen Bones of St. John of Matha A. Katie Harris, 2023-11-03 On the night of March 18, 1655, two Spanish friars broke into a church to steal the bones of the founder of their religious institution, the Order of the Most Holy Trinity. This book investigates this little-known incident of relic theft and the lengthy legal case that followed, together with the larger questions that surround the remains of saints in seventeenth-century Catholic Europe. Drawing on a wealth of manuscript and print sources from the era, A. Katie Harris uses the case of St. John of Matha's stolen remains to explore the roles played by saints' relics, the anxieties invested in them, their cultural meanings, and the changing modes of thought with which early modern Catholics approached them. While in theory a relic's authenticity and identity might be proved by supernatural evidence, in practice early modern Church authorities often reached for proofs grounded in the material, human world—preferences that were representative of the standardizing and streamlining of sixteenth- and seventeenth-century saint-making. Harris examines how Matha's advocates deployed material and documentary proofs, locating them within a framework of Scholastic concepts of individuation, identity, change, and persistence, and applying moral certainty to accommodate the inherent uncertainty of human evidence and relic knowledge. Engaging and accessible, *The Stolen Bones of St. John of Matha* raises an array of important questions surrounding relic identity and authenticity in seventeenth-century Europe. It will be of interest to students, scholars, and casual readers interested in European history, religious history, material culture, and Renaissance studies.

Architecture and Geometry in the Age of the Baroque George L. Hersey, 2001-03 Explores the interrelations of architecture and geometry in the age of the Baroque, explaining how the advancement of geometry and the abstractions of mathematics were used in the architecture of the era.

Graphic Imprints Carlos L. Marcos, 2018-05-30 This is the Proceedings of the International Congress of Graphic Design in Architecture, EGA 2018, held in Alicante, Spain, May 30-June 1, 2018.
