Handbook of Turtles Archie Carr, 2018-10-18 Having spent years studying turtles in their native habitats, Archie Carr brought together a wealth of information in this celebrated volume. Organized in clear and concise fashion, written in an engaging and lively manner, and furnished with black-and-white photographs, drawings, and maps, *Handbook of Turtles* (first published in 1952) gives a comprehensive summary of 79 species and subspecies of North American turtles. In the foreword to 1995 paperback edition, J. Whitfield Gibbons, renowned ecologist and natural history author, brings the book into historical perspective and supplies information to bring it up to date. In the introduction, Carr considers such topics as turtle physiology, reproduction, growth, adaptation, and behavior. The introduction also includes discussions of methods for collecting specimens, the evolutionary origins of turtles, and the mythology and folklore surrounding the turtle. The second part of the volume is organized according to keys that give identifying characteristics, life histories, and illustrations of each species. Under headings of geographical range, distinguishing features, description, habitat, habits, breeding, feeding, and economic importance, the volume provides detailed accounts of the various species and subspecies. Throughout Carr offers colorful recollections and anecdotes about his fieldwork and research.

The Forest Farms of Kandy D.J. McConnell, K.A.E. Dharmapala, S.R. Attanayake, 2017-03-02 Throughout the tropical world, especially in South and Southeast Asia, tropical America, Africa and Oceania, there exists a range of forest garden farming systems. These are small, low-input, but productive and sustainable family units of highly diversified trees, palms, bushes and vines, with few conventional field crops or livestock. Providing a survey of these systems around the world and an in-depth analysis of the farms around Kandy, Sri Lanka, this book offers an economic and ecological description and evaluation of this ancient agroforestry system and its relationship to a wide range of global agro-development and environmental problems. Guided by a table that lists some 30 socio-economic and social criteria by which all farming systems can and should be evaluated, the book presents persuasive evidence supported by comprehensive references. It also

examines historical and archaeological findings in order to assess the role these tropical forests played in the general adoption of agricultural farming.
