Clinical use of biomarkers for neurodegenerative disorders Manuel Menéndez-González,2014-12-03 The prevalence of neurodegenerative disorders is increasing dramatically and one of the major challenges today is the need of early and accurate diagnosis, the other is the need of more effective therapies -in turn the development of such therapies also requires early and accurate diagnosis-. The main hope for an earlier and more accurate diagnosis comes from the use of biomarkers. Much research is being done trying to solve the many interrogates related to the role of biomarkers in clinical practice, including the early diagnosis, differential diagnosis and follow-up of neurodegenerative disorders. This is a field where translational research is intense enough to make this topic interesting for basic researchers and clinicians. Indeed, the amount and quality of articles received in response to the call for contributions was very good. This eBook contains a good amount of high quality articles devoted to diverse techniques across several neurodegenerative disorders from different perspectives, including original reports, reviews, methods reports and opinion letters on biochemical biomarkers in biological fluids, neuroimaging techniques and multidimensional approaches linking clinical findings with biomarkers. The disorders covered are also diverse: Alzheimer's disease, Frontotemporal Dementia, Dementia with Lewy Bodies, Huntington's disease, Parkinson's disease among others. As we can learn from articles in this Research Topic, biomarkers are allowing us to expand the knowledge on the biological and anatomical basis of neurodegenerative diseases and to implement diagnostic techniques in clinical practice and clinical trials.

**Building for the Future: Durable, Sustainable, Resilient** Alper Ilki,Derya Çavunt,Yavuz Selim Çavunt,2023-05-31

This book presents the proceedings of the fib Symposium “Building for the future: Durable, Sustainable, Resilient”, held in Istanbul, Turkey, on 5-7 June 2023. The book covers topics such as concrete and innovative materials, structural performance and design, construction methods and management, and outstanding structures. fib (The International Federation for Structural Concrete) is a not-for-profit association whose mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical, economic, aesthetic, and environmental performance of concrete construction.

**Bioeconomy of Buildings** Jan Grossarth, 2025-03-17 This book looks at how the bioeconomy and circular economy can help make construction more resource-conserving. The construction sector is at a crossroads, searching for pathways to smarter material use — whether bricks, steel, concrete, or wood. While technical solutions and innovative concepts exist, their widespread adoption lags. This inertia stems not just from technical or economic challenges but also from the deeper, often overlooked layers of social and cultural dynamics: the roles of actors, institutions, and collective perceptions of ecological crises. The book weaves together quantitative insights and qualitative reflections, exploring the rich history of resource-conscious construction while embracing the promise of groundbreaking biotechnological innovations. Can materials like lab-grown bioplastics, innovative cements, recycled components, or renewable resources such as CLT wood and straw bale construction drive progress toward material longevity? What contributions can sustainable architecture — rooted in aesthetics, character, originality, and historical continuity — make to these efforts? What roles do certifications and lifecycle assessments play? This book explores these questions, offering a compelling narrative through the bioeconomy approach, which envisions circular material flows grounded in economic pragmatism. Since the 1950s, when craftsmanship in construction was replaced by industrial processes, knowledge about the value of materials was supplanted by cheap, poorly applied chemistry. As a result, we built residential developments and suburbs that are not only aesthetically unappealing but also riddled with hazardous waste. [...] This book by Jan Grossarth has several strengths. Firstly, it avoids the trap of suggesting that the future of construction must rely solely on wood and biological materials — eschewing the utopian vision of a 'back to nature' approach to building. Instead, it offers a broad overview of the bewilderingly numerous concepts and ideologies surrounding sustainability, bringing together many promising paths that are emerging in construction. **Concepts and Models for Drug Permeability Studies** Bruno Sarmiento, Catarina Leite Pereira, José Das Neves, 2024-02-23 Concepts and Models for Drug Permeability Studies: Cell and Tissue Based in Vitro Culture Models, Second Edition, summarizes the most important developments in in vitro models for predicting the permeability of drugs. This book is structured around three different approaches, summarizing the most recent achievements regarding models comprising (i) immortalized cells with an intrinsic ability to grow as monolayers when seeded in permeable supports, (ii)

primary cells isolated from living organisms and directly cultured as barrier monolayers, and (iii) tissue-based models constructed with cell lines and extracellular matrix that resembles the tridimensional structure of mucosae and other biological membranes, or animal/patient-derived tissues. Each model is covered in detail, including the protocol of generation and application for specific drugs/drug delivery systems. The equivalence between in vitro cell and tissue models and in vivo conditions is discussed, highlighting how each model may provisionally resemble different drug absorption route. Chapters included in the first edition were updated with relevant data published in recent years, while four new chapters were included to reflect new emerging directions and trends in drug permeability models. Concepts and Models for Drug Permeability Studies: Cell and Tissue Based in Vitro Culture Models, Second Edition, is a critical reference for drug discovery and drug formulation scientists interested in delivery systems intended for the administration of drugs through mucosal routes and other important tissue barriers (e.g. the BBB). Researchers studying mucosal biology can use this book to familiarize themselves and exploit the synergic effect of mucosal delivery systems and biomolecules. - Summarizes the current advances in the use of permeability models in drug transport - Covers the most important buccal, gastric, intestinal, pulmonary, nasal, vaginal, ocular, renal, skin, and blood-brain barrier in vitro models. Includes case studies to facilitate understanding of various concepts in computer-aided applications - Updates in the second edition include organ-on-chip devices, 3D advanced models (multiple layered tissues, organoids, etc.), and multicompartmentalized tissue models

Punching shear of structural concrete slabs FIB - Féd. Int. du Béton, 2017 fib Bulletin 81 reports the latest information available to researchers and practitioners on the analysis, design and experimental evidence of punching shear of structural concrete slabs. It follows previous efforts by the International Federation for Structural Concrete (fib) and its predecessor the Euro-International Committee for Concrete (CEB), through CEB Bulletin 168, Punching Shear in Reinforced Concrete (1985) and fib Bulletin 12, Punching of structural concrete slabs (2001), and an international symposium sponsored by the punching shear subcommittee of ACI Committee 445 (Shear and Torsion) and held in Kansas City, Mo., USA, in 2005. This bulletin contains 18 papers that were presented in three sessions as part of an international symposium held in Philadelphia, Pa., USA, on October 25, 2016. The symposium was co-organized by the punching shear sub-committee of ACI 445 and by fib Working Party 2.2.3 (Punching and Shear in Slabs) with the objectives of not only disseminating information on this important design subject but also promoting harmonization among the various design theories and treatment of key aspects of punching shear design. The papers are organized in the same order they were presented in the symposium. The symposium honored Professor Emeritus Neil M. Hawkins (University of Illinois at Urbana-Champaign, USA), whose contributions through the years in the field of punching shear of structural concrete slabs have been paramount. The papers cover key aspects related to punching shear of structural concrete slabs under different loading conditions, the study of size effect on punching capacity of slabs, the effect of slab reinforcement ratio on the response and failure mode of slabs, without

and with shear reinforcement, and its implications for the design and formulation in codes of practice, an examination of different analytical tools to predict the punching shear response of slabs, the study of the post-punching response of concrete slabs, the evaluation of design provisions in modern codes based on recent experimental evidence and new punching shear theories, and an overview of the combined efforts undertaken jointly by ACI 445 and fib WP 2.2.3 to generate test result databanks for the evaluation and calibration of punching shear design recommendations in North American and international codes of practice.

*Emergent Timber Technologies* Simone Jeska, Khaled Saleh Pascha, 2014-10-27 The “old” material of wood has been used to construct dwellings of different types since the dawn of mankind. And not without reason. Its low density combined with high rigidity, good processability, and its resistance makes it an excellent building material. There is currently a pioneering renaissance of the timber construction, for two distinct reasons: first, wood is increasingly being rediscovered as one of the most important renewable raw materials for sustainable construction. Moreover, a revolution in the construction of timber structures began several years ago with the ever-progressive use of three-dimensional CAD models for digitally controlled robot manufacturing. The book documents these developments, in particular the engineering bonding techniques, the introduction of digital production techniques, and the innovative material developments of this material. The chapter on composite structures and experimental structures specifically address trends toward the future-oriented dimensions of timber construction. In the final section, outstanding designs are documented in detail, such as the Club House of Haesley Nine Bridges Golf Course designed by Shigeru Ban in Yeosu, South Korea, and the double gymnasium in Borex-Crassier, Switzerland, by Graeme Mann and Patricia Capua Mann.

Rethinking Prototyping Christoph Gengnagel, Axel Kilian, Julien Nembrini, Fabian Scheurer, 2013-10-02 Design modelling has benefited from computation but in most projects to date there is still a strong division between computational design and simulation leading up to construction and the completed building that is cut off from the computational design modelling. The Design Modelling Symposium Berlin 2013 would like to challenge the participants to reflect on the possibility of computational systems that bridge design phase and occupancy of buildings. This rethinking of the designed artifact beyond

its physical has had profound effects on other industries already. How does it affect architecture and engineering? At the scale of engineering and building systems new perspectives may open up by engaging built form as a continuous prototype, which can track and respond during use and serve as a real world implementation of its design model. This has been tried many times from intelligent façades to smart homes and networked grids but much of it was only technology driven and not approached from a more holistic design perspective.

**Structures and Architecture** Paulo J. da Sousa Cruz, 2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process, exploiting together new concepts, applications and challenges. This set of book of abstracts and full paper searchable CD-ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference (ICSA2016), organized by the School of Architecture of the University of Minho, Guimarães, Portugal (July 2016), to promote the synergy in the collaboration between the disciplines of architecture and structural engineering. The set addresses all major aspects of structures and architecture, including building envelopes, comprehension of complex forms, computer and experimental methods, concrete and masonry structures, educating architects and structural engineers, emerging technologies, glass structures, innovative architectural and structural design, lightweight and membrane structures, special structures, steel and composite structures, the borderline between architecture and structural engineering, the history of the relationship between architects and structural engineers, the tectonics of architectural solutions, the use of new materials, timber structures and more. The contributions on creative and scientific aspects of the conception and construction of structures, on advanced technologies and on complex architectural and structural applications represent a fine blend of scientific, technical and practical novelties in both fields. This set is intended for both researchers and practitioners, including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers and product manufacturers, and other experts and professionals involved in the design and realization of architectural, structural and infrastructural projects.

The book provides a framework for practitioners and scientists on how the energy transition can contribute to achieving climate goals in the building sector. Innovations and creative approaches for solutions from the lighthouse projects of the Solar Building/Energy Efficient City

funding initiative are presented.

**The Monumental** Argyro Loukaki, 2025-03-14 The Monumental is an interdisciplinary collection of original, cutting-edge contributions by international researchers pursuing the epistemology and ontology of monuments over time and geography. The contributors are specialists in geography, architectural theory and history, prehistoric, Greek and Roman archaeology, modern art, Byzantine studies, landscape theory, and heritage reception. Against the global climate of flux and uncertainty in the present turbulent world, the durability of monuments as “urban permanences” emerges as one of the few remaining spatial and mental anchorages. As such it is needed, maintained, enhanced, imitated, landscaped, and even invented. In particular, the monumental, a spatial and aesthetic phenomenon of perpetual importance, has recently acquired major new meanings. It now emerges as a key political, spatial, aesthetic, symbolic, architectural, and archaeological manifestation or entity, open to constantly new, even contradictory forms and expressions. This collection addresses the urgent need for relevant research on the monumental. It breaks new ground by posing fresh questions on the ontology, temporality, purpose, politics, scale, place, contestations, and aesthetics of and around the monumental, from prehistoric time to the present, as well as in both Eastern and Western geographies. Monuments are explored as bearers of the urban majestic, extraordinary and sublime. The Monumental poses questions about changing perceptions, the evocative power of representation, identity construction, ideology and symbolism, the vital necessity for a communicative and active public space around monuments, imitation processes across geographical space-time, as well as the powers that construct, deconstruct, or identify the monumental but also the anti-monumental as such. Geographies of reference are the European space, the United States, and Asia. Wide-ranging theorizations alternate with in-depth analyses of paradigmatic cases. Conventional as well as alternative forms of the monumental in the present shifting world are also pursued. The Monumental is of great value and interest to scholars, students, and professionals in the fields of architectural theory, history and design, archaeology, art theory and history, Byzantine studies, restoration, urban design and planning, human, urban and cultural geography, cultural studies, social anthropology, Asian studies, as well as those in wider subdisciplines.
